TROX® TECHNIK
The art of handling air

The art of handling air

TROX understands the art of handling air like no other company. Our slogan "The art of handling air" is where we derive our mandate: "Air is life". For all beings depend on air; it is one of the most natural and at the same time one of the most precious goods. **Good air is a factor in people's quality of life;** this is why it should be improved. For us, **well-being, safety and efficiency are at the centre of our actions, as people are the measure of all things and their well-being is our goal.**

Our products should therefore add to the well-being and comfort of people, i.e. provide indoor air of a good quality. Our production processes have to be efficient, and the resulting products have to be energy-efficient. All components have to be safe to install, safe to use and ensure safety, for example, with regard to fire protection.

Since the company's inception in 1951, we have been developing and producing advanced components, units and systems for the ventilation and air conditioning of rooms as well as for fire and smoke protection. We have become a global leader of innovation in these fields. TROX and their X-Fans building fans ideally complete the TROX portfolio.

The Heinz Trox Foundation, which was founded in 1991 and based in Neukirchen-Vluyn, has a 94 % stake in TROX GmbH. It is an expression of the life's work of its founder, Heinz Trox, and its founding paved the way for **TROX GmbH to continue as an independent company.** The object of the foundation is the advancement of scientific projects in the field of ventilation and air-conditioning technology and the support of social and cultural activities.

More than the sum of its parts

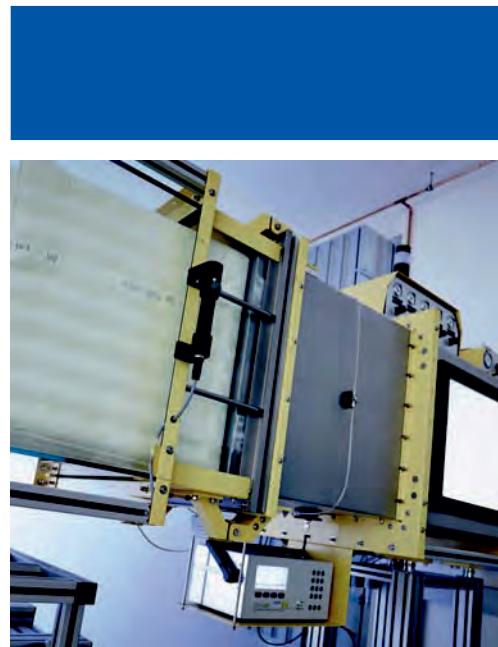

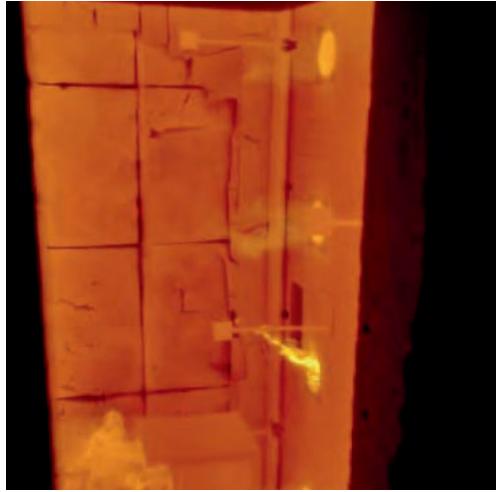

Modern buildings are unimaginable without individually designed air-conditioning and ventilation systems. Architecture and technical functions should complement each other and form a dynamic unit of perfectly coordinated components, devices and systems. For a project to be successful, comprehensive product and systems expertise in the field of ventilation and air conditioning is indispensable. **TROX offer all this from a single source.** The benefits for specialist consultants and HVAC contractors: **one face to the customer.**

Working closely with its customers, TROX develops demand-based solutions that take the relevant criteria for each building into account and meet the requirements of its occupants. This close cooperation leads to sustainable solutions that help to increase people's well-being and to protect life and the environment.

The wide variety of components is what forms the basis of our company. Developments in technology, particularly increasing **digitalisation** – in our sector also – has allowed us to combine various components and devices to create **sub-systems and systems**. As a result, TROX today offers closed loop control and open loop control for a wide range of different applications of ventilation and air-conditioning technology.

- Intelligent control for centralised room air conditioning (X-CUBE control)
- Demand-based control for rooms and zones (X-AIRCONTROL)
- Control of fire and smoke protection systems (TROXNETCOM)
- Control of smoke exhaust fans (X-FAN control)
- Room air management for sensitive areas (LABCONTROL) and
- Visualisation, open loop control and closed loop control of the entire air conditioning and ventilation system (X-TAIRMINAL)

These open loop control and closed loop control systems from TROX work as a system unit to ensure an energy-efficient, safe and highly functional system with a high level of comfort for a number of different types of buildings.

Always a step ahead

Our extensive research and development efforts help to find innovative solutions in all areas of indoor ventilation and air conditioning technology. In total, TROX has over **450 property rights worldwide** and **12 development centres**. In addition to the continuous and planned development work for individual product groups, project-related development is becoming increasingly important.

The **International Center Fire Protection** is located at the TROX Group International Head Office in Neukirchen-Vluyn. It is the most modern fire protection laboratory in Europe. The test facilities enable fire tests to be carried out in accordance with all the established international standards. The furnace is the heart of the facility, being large enough to test huge tunnel dampers for the smoke extraction of underground transport systems.

In our **International Center for Air Conditioning and Acoustics**, in addition to two reverberation chambers – as almost every new or further developed product is acoustically measured and optimised – there are various test equipment for control, indoor air and filter technology as well as demo labs for air management systems or air flow studios.

The main activities of our R&D include:

- Developing new products and technologies
- Optimising existing products
- Project-related tests with product development
- Preparations for technical documentation, lectures and publications and
- Customer support

The Research & Development department also works closely with universities and research institutions around the world.

We are here to help

Good advice doesn't need to be expensive, so please feel free to contact our experts directly. With a [comprehensive customer support service](#) and an extensive service network, TROX can guarantee a full range of services from the initial design stage and throughout the entire life cycle of your system.

Client-oriented services are an integral part of the successful ventilation and air conditioning solutions at TROX. They decidedly improve the cost-effectiveness of any property during its life.

From as early as the design stage, you can benefit from intensive support from our employees. Thanks to direct contact with your personal TROX advisor and various design aids, you will be given the best chance of ensuring a successful project outcome from the very early stages of development. From product selection through to commissioning, you can count on optimum support from TROX.

Our Technical Service staff are also available beyond the commissioning phase as competent partners and advisors.

TROX also sets a precedent, in that it is continually striving for excellence – which is why TROX offers a wide-ranging training programme in its TROX Academy.

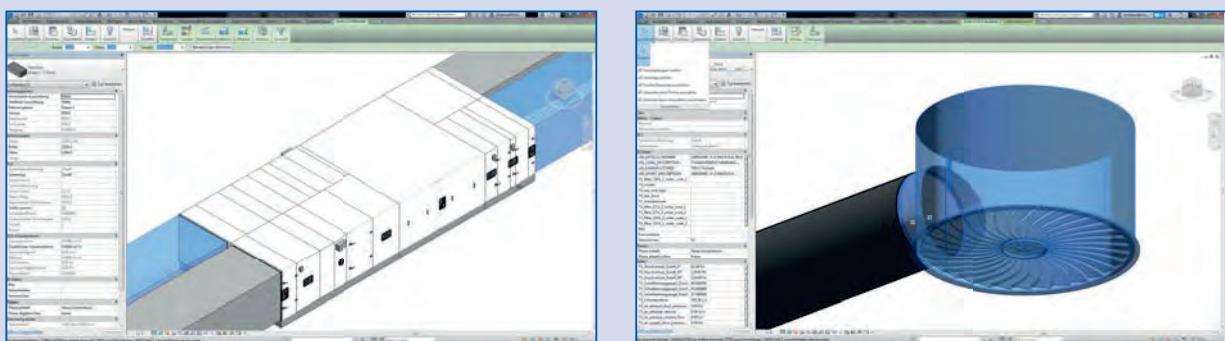

TROX Product Data / Easy Product Finder

X-BIM CAD Browser

Revit / AutoCAD

Simple, optimum design

With its intuitive operating concept, the [TROX design programme Easy Product Finder](#) offers fast, simple design of TROX products for projects. Reliable technical data, interactive design assistants and numerous report functions such as reports on input parameters and design results, specification texts and bills of materials, make the Easy Product Finder an indispensable tool in the building services engineering industry.

X-BIM – design with digital product models

Interdisciplinary building design and construction, computer-aided, and with all trades working on the same data model: this is what BIM is about. As early as in the project phase, a digital model of the building is created. All relevant data for the design, construction and management of an object are included and made available to all parties involved. To make the benefits of digital design efficiently usable, TROX provides a wide range of digital product data – free of charge – for a large number of TROX products.

One of our solutions is the X-BIM CAD browser to generate digital product data for TROX components and X-CUBE air handling units. At the touch of a button, you can import the data directly into the current Revit or AutoCAD project.

More information on BIM and TROX, the X-BIM CAD browser and all other solutions can be found on our website.

All of this – and more!

The TROX media world is just as diverse as the product range. Digital or printed, static or interactive – depending on the demand, we offer a wide range of different media for investors, specialist consultants and HVAC contractors. Have a look – and discover the extensive range of information from TROX.

Product overview

From extract grilles to zone modules, air handling units to air terminal devices or ventilation fans through to all the components needed for a complete smoke and heat extraction system, the [Quick Selection Guide](#) will give you information on everything TROX has to offer. With the most important technical data, dimensions and weights as well as a brief description of the products. Everything you need for an initial overview. All at hand.

Detailed information just a click away

For anyone who would like more than an overview, the TROX website www.troxtechnik.com provides all the information you need on TROX and our products. Product data sheets, operating manuals, certificates and, and ... Everything is available online, just a click away.

Direct design

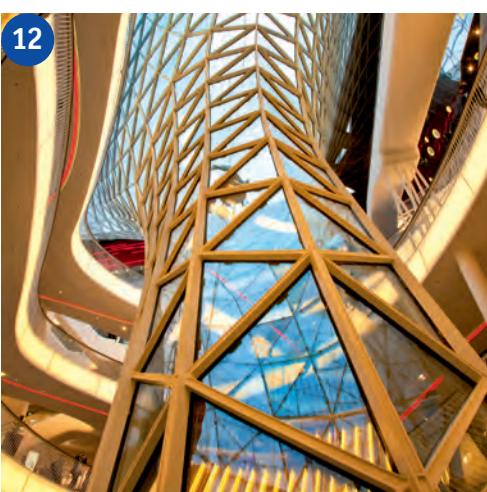

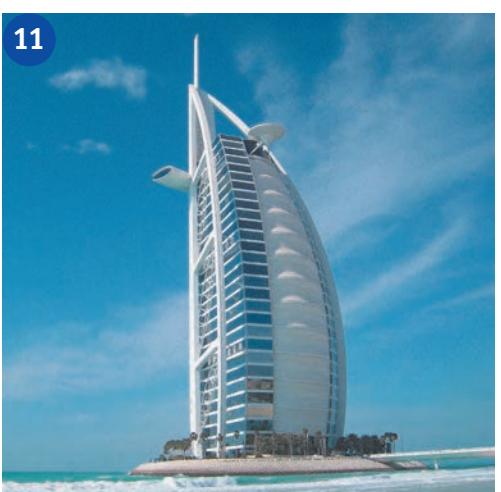

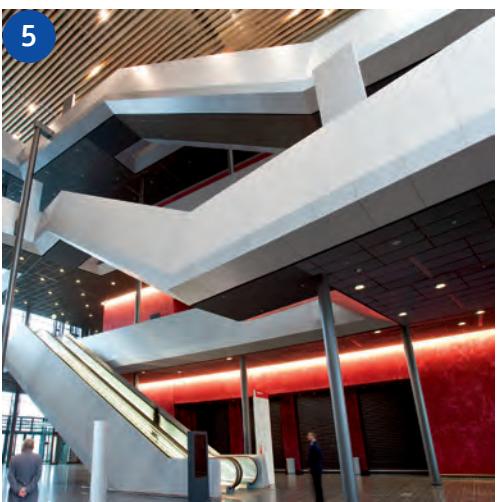

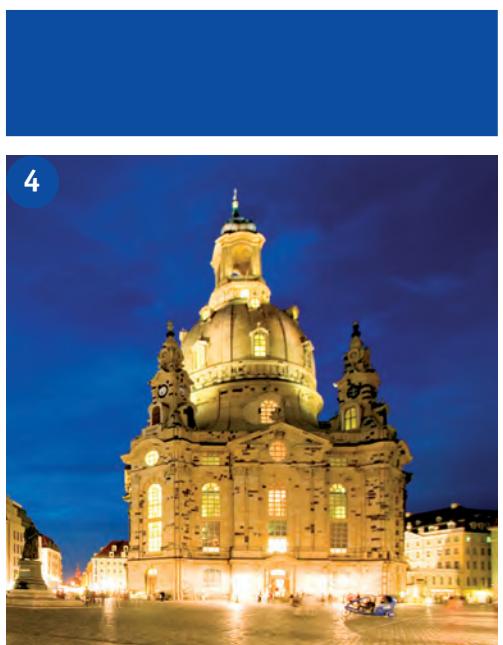

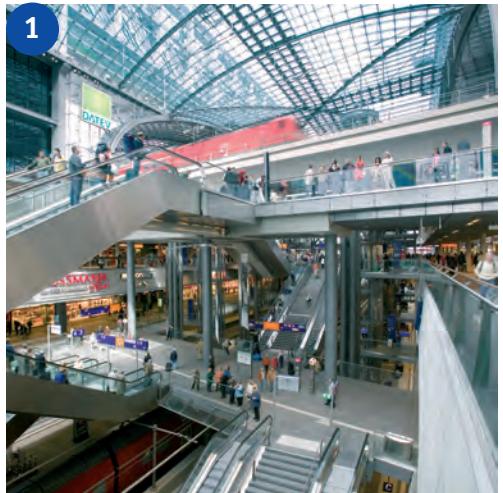

The TROX design tool [Easy Product Finder](#) offers additional technical information – above and beyond the Quick Selection Guide and Internet. Simply download from our website and install on your PC and you'll have all you need to start designing our components for your project. www.trox.de/epf

Simple configuration

The Easy Product Finder for TROX components is what the TROX X-FANS [product configurator](#) is for our fans. Simply go to X-FANS in the product section of our website. From here you are only two clicks away from the configurator . www.trox-xfans.de

Knowing what works

Whether we are talking about hotels, hospitals, offices, labs, airports, clean-rooms or shopping malls, in each of these very different building types there are various tasks and challenges related to ventilation and air-conditioning technology. Depending on the type of building, the focal points are, for instance, hygiene, good room air quality, personal protection but also protection of production processes or fire protection and smoke extraction. Here, investors, specialist consultants and architects get a lot of interesting information and suggestions in advance.

TROX, wherever you look

We have been developing, producing and selling products for ventilation and air-conditioning technology for over 65 years. And this can be seen wherever you look. Around the world in airports, hotels, sports arenas and many other public buildings. Here is a brief overview:

- 1** Berlin main train station – application: infrastructure and transport
- 2** Max Planck Institute, Münster – application: cleanrooms
- 3** Canary Wharf Station, London – application: tunnels
- 4** Frauenkirche Dresden – application: cultural monuments
- 5** Exhibition Hall 11, Frankfurt –
application trade fair and convention buildings
- 6** National stadium, Beijing – application: stadiums
- 7** Crane buildings, Cologne – application: offices and living space
- 8** Rhine-Waal University of Applied Sciences, Kamp-Lintfort, Germany –
application: laboratories
- 9** Frankfurt Airport – application: infrastructure and transport
- 10** Sydney Opera House – application: theatres and concert halls
- 11** Hotel Burj al Arab, Dubai – application: hotels
- 12** MyZeil, Frankfurt – application: shopping centres/retail

QUICK
SELECTION
GUIDE

CEILING DIFFUSERS

1 CEILING DIFFUSERS

1.1 Ceiling swirl diffusers

For the most demanding requirements of technical function, comfort, and design

AIRNAMIC

11

With low sound power level for comfort zones, with individually manually adjustable air control blades

VDW

15

With very low sound power level for comfort zones and individually manually adjustable air control blades

TDV-SilentAIR

21

With low sound power level for comfort and industrial zones, with fixed air control blades

RFD

27

RFD-SIRIUS is an air terminal device combined with a VAV terminal unit

RFD-SIRIUS

37

For comfort zones, with fixed air control blades

FD

42

With very low sound power level for comfort zones, with fixed air control blades

TDF-SilentAIR

47

For high rooms, with adjustable air control blades

VD

53

For high rooms, with adjustable air control blades

VDL

58

For high volume flow rates, with fixed air control blades

FDE

64

1.2 Design ceiling swirl diffusers

For more refined comfort zones with special demands on architecture and design, with fixed air control blades

XARTO

68

For the creative design of ceilings in comfort zones, with fixed air control blades

ADD

73

For horizontal swirling supply air discharge creating high induction levels, with fixed air control blades

DCS

79

1.3 Ceiling diffusers

For large temperature differences in heating mode, high penetration of air, with adjustable air control blades

VDR

90

For four-way horizontal supply air discharge, with fixed air control blades - aluminium diffuser face

ADLQ

95

For four-way horizontal supply air discharge, with fixed air control blades - sheet steel diffuser face

DLQ

100

For horizontal radial supply air discharge, with fixed air control blades - aluminium diffuser face

ADLR

105

For horizontal one-way to four-way air discharge, for comfort zones, with fixed baffle element

DLQL

116

For horizontal one-way to four-way supply air discharge, with fixed air control blades - sheet steel diffuser face

DLQ-AK

123

For horizontal four-way air discharge, with integral fire barrier for mineral fibre false ceilings, with fixed air control blades

DLK-Fb

128

1.4 Plenum boxes

Universal plenum box, available in many variants

AK-Uni

130

**List of abbreviations**

L_{WA} [dB(A)]	A-weighted sound power level of air-regenerated noise
\dot{V} [m^3/h] and [l/s]	Volume flow rate
Δt_z [K]	Supply air to room air temperature difference, i.e. supply air temperature minus room temperature
Δp_t [Pa]	Total differential pressure
A_{eff} [m^2]	Effective air discharge area
$\emptyset D$ [mm]	Outer diameter of the spigot
$\emptyset D_1$ [mm]	Outer diameter of a circular diffuser face
$\emptyset D_2$ [mm]	Diameter of a circular diffuser face style
$\emptyset D_3$ [mm]	Diameter of a circular plenum box
Q_1 [mm]	Outer diameter of a square diffuser face
Q_2 [mm]	Dimensions of a square diffuser face style
Q_3 [mm]	Dimensions of a square plenum box
H_1 [mm]	Distance (height) from the lower edge of the suspended ceiling to the lower edge of the diffuser face
H_2 [mm]	Height of a ceiling diffuser, from the lower edge of the suspended ceiling to the upper edge of the spigot
H_3 [mm]	Height of a ceiling diffuser with plenum box, from the lower edge of the suspended ceiling to the upper edge of the plenum box or of the spigot
A [mm]	Position of the spigot, defined by the distance of the spigot centre line to the lower edge of the suspended ceiling
C [mm]	Length of the spigot
m [kg]	Weight

All sound power levels are based on 1 pW.

For the most demanding requirements of technical function, comfort, and design

Features

Circular and square ceiling swirl diffusers with fixed air control blades, for high volume flow rates at low sound power levels and low differential pressure due to innovative polymer technology

- ▶ Nominal sizes 300, 400, 600, 625
- ▶ Volume flow rate range 13 - 385 l/s or 47 - 1386 m³/h
- ▶ Plastic diffuser face with overlapping, three-dimensionally profiled blades, for the most efficient swirl and high induction
- ▶ For supply and extract air
- ▶ For variable and constant volume flows
- ▶ For all types of ceiling systems, and with an extended border also suitable for freely suspended installation
- ▶ Diffuser face with gently sloped, flat border - only 3 mm high
- ▶ Plenum box with acoustically optimised and lockable damper blade
- ▶ Ideal for comfort zones

Optional equipment and accessories
▶ Exposed diffuser face available in RAL CLASSIC colours

Application

- ▶ Type AIRNAMIC ceiling swirl diffusers are used as supply air or extract air diffusers for comfort zones
- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ Horizontal swirling supply air discharge for mixed flow ventilation
- ▶ The efficient swirl creates high induction levels, thereby rapidly reducing the temperature difference and airflow velocity (supply air variant)
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -12 to +10 K
- ▶ For room heights up to 4 m (lower edge of suspended ceiling)
- ▶ For all types of ceiling systems
- ▶ With an extended border also suitable for freely suspended installation (supply air variant)

Variants

- ▶ AIRNAMIC-Q: Square diffuser face
- ▶ AIRNAMIC-R: Circular diffuser face
- ▶ AIRNAMIC-*Z: Supply air
- ▶ AIRNAMIC-*A: Extract air

Connection

- ▶ Horizontal duct connection

Special characteristics

- ▶ Plastic diffuser face with overlapping, three-dimensionally profiled blades, for the most efficient swirl and high induction
- ▶ For all types of ceiling systems, and with an extended border also suitable for freely suspended installation
- ▶ Diffuser face with gently sloped, flat border - only 3 mm high
- ▶ Plenum box for supply air, with an optimised equalising element that ensures a uniform airflow through the diffuser face

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

Nominal sizes	300, 400, 600, 625 mm
Minimum volume flow rate, with $\Delta t_z = -6$ K	13 - 76 l/s or 47 - 274 m ³ /h
Maximum volume flow rate, with $L_{WA} \approx 50$ dB(A)	95 - 385 l/s or 342 - 1386 m ³ /h
Supply air to room air temperature difference	-12 to +10 K

Features

Circular and square ceiling swirl diffusers for high room air change rates

- ▶ Nominal sizes 300, 400, 500, 600, 625, 825
- ▶ Volume flow rate range 7 - 470 l/s or 25 - 1692 m³/h
- ▶ Diffuser face made of galvanised sheet steel, powder-coated
- ▶ For supply and extract air
- ▶ For variable and constant volume flows
- ▶ For all types of ceiling systems, and with an extended border also suitable for freely suspended installation
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity
- ▶ Air change rates of up to 35 per hour can be achieved by arranging several diffusers in a row with a minimum pitch of 0.9 m (centre line to centre line)
- ▶ Ideal for comfort zones

Optional equipment and accessories

- ▶ Exposed diffuser face available in RAL CLASSIC colours, air control blades in black or white
- ▶ Horizontal or vertical duct connection
- ▶ Plenum box with cord-operated damper blade and pressure tap

Application

- ▶ Type VDW ceiling swirl diffusers are used as

supply air or extract air diffusers for comfort zones

- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ Horizontal swirling supply air discharge for mixed flow ventilation
- ▶ The efficient swirl creates high induction levels, thereby rapidly reducing the temperature difference and airflow velocity (supply air variant)
- ▶ Individually adjustable air control blades to meet individual requirements
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -12 to +10 K
- ▶ For room heights up to 4 m (lower edge of suspended ceiling)
- ▶ For all types of ceiling systems
- ▶ With an extended border also suitable for freely suspended installation (supply air variant)

Variants

- ▶ VDW-Q: Square diffuser face
- ▶ VDW-R: Circular diffuser face
- ▶ VDW-*Z: Supply air
- ▶ VDW-*A: Extract air

Connection

- ▶ H: Horizontal duct connection
- ▶ V: Vertical duct connection

Attachments

- ▶ M: Damper blade for volume flow rate balancing
- ▶ MN: Pressure tap and cord-operated damper blade for volume flow rate balancing with the diffuser face in place

Accessories

- ▶ Lip seal

Special characteristics

- ▶ Air control blades can be adjusted individually manually for adjusting the air pattern
- ▶ For all types of ceiling systems, and with an extended border also suitable for freely suspended installation
- ▶ Black or white air control blades
- ▶ Air change rates of up to 35 per hour can be achieved by arranging several diffusers in a row with a minimum pitch of 0.9 m (centre line to centre line)

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

Nominal sizes	300, 400, 500, 600, 625, 825 mm
Minimum volume flow rate, with $\Delta t_z = -6 \text{ K}$	7 - 99 l/s or 25 - 357 m ³ /h

Features

Circular and square ceiling swirl diffusers

- ▶ Nominal sizes 300, 400, 500, 600, 625
- ▶ Volume flow rate range 11 - 315 l/s or 40 - 1134 m³/h
- ▶ Diffuser face made of galvanised sheet steel, powder-coated
- ▶ For supply and extract air
- ▶ For variable and constant volume flows
- ▶ For all types of ceiling systems, and with an extended border also suitable for freely suspended installation
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity
- ▶ Air control blades can be adjusted individually for adjusting the air pattern
- ▶ Ideal for comfort zones

Optional equipment and accessories

- ▶ Exposed diffuser face available in RAL CLASSIC colours, air control blades in black or white
- ▶ Horizontal or vertical duct connection
- ▶ Plenum box with cord-operated damper blade and pressure tap

for comfort zones

- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ Horizontal swirling supply air discharge for mixed flow ventilation
- ▶ The efficient swirl creates high induction levels, thereby rapidly reducing the temperature difference and airflow velocity (supply air variant)
- ▶ Individually adjustable air control blades to meet individual requirements
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -12 to +10 K
- ▶ For room heights up to 4 m (lower edge of suspended ceiling)
- ▶ For all types of ceiling systems
- ▶ With an extended border also suitable for freely suspended installation (supply air variant)

Application

- ▶ Type TDV-SilentAIR ceiling swirl diffusers are used as supply air or extract air diffusers

Variants

- ▶ TDV-SA-Q: Square diffuser face
- ▶ TDV-SA-R: Circular diffuser face
- ▶ TDV-SA-*Z: Supply air
- ▶ TDV-SA-*A: Extract air

Connection

- ▶ H: Horizontal duct connection
- ▶ V: Vertical duct connection

Attachments

- ▶ M: Damper blade for volume flow rate balancing
- ▶ MN: Pressure tap and cord-operated damper blade for volume flow rate balancing with the diffuser face in place

Accessories

- ▶ Lip seal

Special characteristics

- ▶ Very low sound power level, ideal for comfort zones
- ▶ Individually manually adjustable air control blades
- ▶ For all types of ceiling systems, and with an extended border also suitable for freely suspended installation
- ▶ Black or white air control blades

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

Nominal sizes	300, 400, 500, 600, 625 mm
Minimum volume flow rate, with $\Delta t_Z = -6 \text{ K}$	11 - 47 l/s or 40 - 169 m ³ /h
Maximum volume flow rate, with $L_{WA} \approx 50 \text{ dB(A)}$	95 - 315 l/s or 342 - 1134 m ³ /h
Supply air to room air temperature difference	-12 to +10 K

Features

Circular and square ceiling swirl diffusers

- ▶ Nominal sizes 125, 160, 200, 250, 315, 400
- ▶ Volume flow rate range 4 - 330 l/s or 14 - 1188 m³/h
- ▶ Diffuser face made of galvanised sheet steel, powder-coated, or of aluminium (depending on variant)
- ▶ For supply and extract air
- ▶ For variable and constant volume flows
- ▶ For all types of ceiling systems
- ▶ With discharge nozzle ideal for cooling in case of freely suspended installation
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity
- ▶ Air change rates of up to 35 per hour can be achieved by arranging several diffusers in a row with a minimum pitch of 0.9 m (centre line to centre line)
- ▶ Ideal for comfort zones

Optional equipment and accessories

- ▶ Exposed diffuser face available in RAL CLASSIC colours
- ▶ Horizontal or vertical duct connection
- ▶ Plenum box with cord-operated damper blade and pressure tap
- ▶ Shallow plenum box

Application

- ▶ Type RFD ceiling swirl diffusers are used as supply air or extract air diffusers for comfort zones
- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ Horizontal swirling supply air discharge for mixed flow ventilation
- ▶ The efficient swirl creates high induction levels, thereby rapidly reducing the temperature difference and airflow velocity (supply air variant)
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -12 to +10 K
- ▶ For room heights up to 4 m (lower edge of suspended ceiling)
- ▶ For all types of ceiling systems
- ▶ With an extended border and discharge nozzle also suitable for freely suspended installation (supply air variant)

Variants

- ▶ RFD-Q: Square diffuser face
- ▶ RFD-R: Circular diffuser face
- ▶ RFD-*D: Diffuser face with discharge nozzle

Connection

- ▶ **K:** Vertical duct connection, with duct collar
- ▶ **US:** Vertical duct connection, with transition piece
- ▶ **A:** Horizontal duct connection, with plenum box

Only RFD-R

- ▶ **UO:** Vertical duct connection, with transition piece and cross bar

Only RFD-R-D

- ▶ **UD:** Vertical duct connection, with transition piece, cross bar and discharge nozzle
- ▶ **N:** Horizontal duct connection, with shallow plenum box to be installed above open cell ceilings

Attachments

- ▶ **M:** Damper blade for volume flow rate balancing
- ▶ **MN:** Pressure tap and cord-operated damper blade for volume flow rate balancing with the diffuser face in place

Accessories

- ▶ Lip seal

Special characteristics

- Low sound power level, ideal for comfort zones

Technical data

Nominal sizes	125, 160, 200, 250, 315, 400 mm
Minimum volume flow rate, with $\Delta t_Z = -6 \text{ K}$	4 - 36 l/s or 14 - 130 m ³ /h
Maximum volume flow rate, with $L_{WA} \approx 50 \text{ dB(A)}$	22 - 330 l/s or 79 - 1188 m ³ /h
Supply air to room air temperature difference	-12 to +10 K

ISO Standards and guidelines

- Sound power level of the air-regenerated noise measured according to EN ISO 5135

1 Type
RFD-SIRIUS Ceiling diffuser

2 Construction style
R Circular
Q Square

3 Construction
D No entry: without discharge nozzle
D With discharge nozzle

4 Connection
T Cross bar with magnets and quick fixing kit

5 Nominal size [mm]
 \varnothing spigot for duct connection

125 For diffuser faces 160 and 200
160 For diffuser faces 200 and 250
200 For diffuser faces 250 and 315
250 For diffuser faces 315 and 400

\varnothing spigot for diffuser face connection (nominal size of diffuser face)

160, 200, 250, 315, 400

6 Attachment (control component)

BC0 Volume flow controller with MP bus interface and analogue interface
 $0 - 10 \text{ V} / 2 - 10 \text{ V}$
BL0 Volume flow controller with LonWorks FTT-10A interface
BM0 Volume flow controller with Modbus RTU interface
BM0-J6 Volume flow controller with Modbus RTU interface and RJ12 socket for connecting an X-AIRCONTROL zone module

7 Signalling (can be selected only for BC0)

E0 $0 - 10 \text{ V DC}$ (variable volume flow rate)
F0 $0 - 10 \text{ V DC}$ (constant volume flow rate)
E2 $2 - 10 \text{ V DC}$ (variable volume flow rate)
F2 $2 - 10 \text{ V DC}$ (constant volume flow rate)

8 Volume flow rate

Variable: $\dot{V}_{\min}, \dot{V}_{\max}$
Constant: \dot{V}_{const}

9 Exposed surface of diffuser face

No entry: powder-coated RAL 9010, pure white
P1 Powder-coated, specify RAL CLASSIC colour
 Gloss level
 RAL 9010 50 %
 RAL 9006 30 %
 All other RAL colours 70 %

Features

RFD-SIRIUS is used in ventilation and air conditioning systems for the demand-based volume flow control and as an air terminal device.

- RFD nominal sizes: 160, 200, 250, 315 and 400
- SIRIUS nominal sizes: 125, 160, 200 and 250
- Volume flow rate range: 4.7 to 171.3 l/s or 17 to 617 m³/h
- For supply air
- Flush ceiling installation, with discharge nozzle also suspended installation
- Control input signal via MP bus, LonWorks FTT-10A, Modbus RTU, or analogue signal
- Integral noise insulation element
- High induction results in a rapid reduction of the temperature difference and airflow velocity
- Ideal for comfort zones

Optional equipment and accessories

- Exposed diffuser face available in RAL CLASSIC colours

Application

- For supplying air to comfort zones in cases where the supply air flow rate is to be controlled

- The variant with discharge nozzle allows for suspended installation
- The efficient swirl creates high induction levels, thereby rapidly reducing the temperature difference and airflow velocity
- Closed-loop volume flow control using an external power supply
- Differential pressure measurement with integral measuring tubes

Variants

Diffuser face

- RFD-R: Circular diffuser face
- RFD-Q: Square diffuser face
- RFD-*D: Diffuser face with discharge nozzle

Control components

- BC0
- BL0
- BM0
- BM0-J6

For information on control components see Type Compact controllers.

Attachments

Variable volume flow control with electronic Compact controller to switch an external control signal and an actual value signal for integration into the central BMS.

- Supply voltage 24 V AC/DC
- The signal interface depends on the selected control component variant
- Variable air or constant air volume flow control
- The flow rate is measured according to the dynamic measurement principle
- Volume flow rate control range: approx. 10 - 100 % of the nominal volume flow rate

Deviation from the operating range:

- 10 - 20% of the nominal volume flow rate: +/- 25%
- 20 - 40% of the nominal volume flow rate: +/- 10%
- 40 - 100% of the nominal volume flow rate: +/- 4%

Electrical connection with cable or plug, depending on the selected control component variant.

Special characteristics

- RFD-SIRIUS combines the functions of a volume flow controller, sound attenuator, plenum box and air terminal device in one unit.

- Low sound power level, ideal for comfort zones
- For all types of ceiling systems, also suitable for freely suspended installation
- Differential pressure measurement with integral measuring tubes

ISO

Standards and guidelines

- Sound power level of the air-regenerated noise measured according to EN ISO 5135
- Hygiene conforms to VDI 6022

Features

Circular and square ceiling swirl diffusers that create high induction levels, for high room air change rates

- ▶ Nominal sizes 300, 400, 500, 600, 625
- ▶ Volume flow rate range 9 - 235 l/s or 31 - 846 m³/h
- ▶ Diffuser face made of galvanised sheet steel, powder-coated
- ▶ For supply and extract air
- ▶ For variable and constant volume flows
- ▶ For all types of ceiling systems, and with an extended border also suitable for freely suspended installation
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity
- ▶ Air change rates of up to 35 per hour can be achieved by arranging several diffusers in a row with a minimum pitch of 0.9 m (centre line to centre line)
- ▶ Ideal for comfort zones

Optional equipment and accessories

- ▶ Exposed diffuser face available in RAL CLASSIC colours
- ▶ Plenum box with cord-operated damper blade and pressure tap

supply air or extract air diffusers for comfort zones

- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ Horizontal swirling supply air discharge for mixed flow ventilation
- ▶ The efficient swirl creates high induction levels, thereby rapidly reducing the temperature difference and airflow velocity (supply air variant)
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -12 to +10 K
- ▶ For room heights up to 4 m (lower edge of suspended ceiling)
- ▶ For all types of ceiling systems
- ▶ With an extended border also suitable for freely suspended installation (supply air variant)

Variants

- ▶ FD-Q: Square diffuser face
- ▶ FD-R: Circular diffuser face
- ▶ FD-*Z: Supply air
- ▶ FD-*A: Extract air

Connection

- ▶ H: Horizontal duct connection
- ▶ V: Vertical duct connection

Attachments

- ▶ M: Damper blade for volume flow rate balancing
- ▶ MN: Pressure tap and cord-operated damper blade for volume flow rate balancing with the diffuser face in place

Accessories

- ▶ Lip seal

Special characteristics

- ▶ High induction results in a rapid reduction of the supply air to room air temperature difference and airflow velocity
- ▶ For all types of ceiling systems, and with an extended border also suitable for freely suspended installation
- ▶ Horizontal or vertical duct connection
- ▶ Air change rates of up to 35 per hour can be achieved by arranging several diffusers in a row with a minimum pitch of 0.9 m (centre line to centre line)

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Application

- ▶ Type FD ceiling swirl diffusers are used as

Features

Circular and square ceiling swirl diffusers

- ▶ Nominal sizes 300, 400, 500, 600, 625
- ▶ Volume flow rate range 10 - 295 l/s or 36 - 1026 m³/h
- ▶ Diffuser face made of galvanised sheet steel, powder-coated
- ▶ For supply and extract air
- ▶ For variable and constant volume flows
- ▶ For all types of ceiling systems, and with an extended border also suitable for freely suspended installation
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity
- ▶ Ideal for comfort zones

Optional equipment and accessories

- ▶ Exposed diffuser face available in RAL CLASSIC colours
- ▶ Horizontal or vertical duct connection
- ▶ Plenum box with cord-operated damper blade and pressure tap

Application

- ▶ Type TDF-SilentAIR ceiling swirl diffusers are used as supply air or extract air diffusers for comfort zones

- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ Horizontal swirling supply air discharge for mixed flow ventilation

- ▶ The efficient swirl creates high induction levels, thereby rapidly reducing the temperature difference and airflow velocity (supply air variant)
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -12 to +10 K
- ▶ For room heights up to 4 m (lower edge of suspended ceiling)
- ▶ For all types of ceiling systems
- ▶ With an extended border also suitable for freely suspended installation (supply air variant)

Variants

- ▶ TDF-SA-Q: Square diffuser face
- ▶ TDF-SA-R: Circular diffuser face
- ▶ TDF-SA-*Z: Supply air
- ▶ TDF-SA-*A: Extract air

Connection

- ▶ **H:** Horizontal duct connection
- ▶ **V:** Vertical duct connection

Attachments

- ▶ **M:** Damper blade for volume flow rate balancing
- ▶ **MN:** Pressure tap and cord-operated damper blade for volume flow rate balancing with the diffuser face in place

Accessories

- ▶ Lip seal

Special characteristics

- ▶ Very low sound power level, ideal for comfort zones
- ▶ Fixed blades
- ▶ For all types of ceiling systems, and with an extended border also suitable for freely suspended installation
- ▶ Horizontal or vertical duct connection

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

Nominal sizes	300, 400, 500, 600, 625 mm
Minimum volume flow rate, with $\Delta t_z = -6 \text{ K}$	10 - 42 l/s or 36 - 151 m ³ /h
Maximum volume flow rate, with $L_{WA} \approx 50 \text{ dB(A)}$	80 - 285 l/s or 288 - 1026 m ³ /h
Supply air to room air temperature difference	-12 to +10 K

Features

Square ceiling swirl diffusers, with manual or motorised adjustment of the air pattern to ensure draught-free ventilation of the occupied zone both in heating and cooling modes

- ▶ Nominal sizes 425, 600, 775, 1050
- ▶ Volume flow rate range 95 - 1490 l/s or 342 - 5364 m³/h
- ▶ Diffuser face made of aluminium with anodised finish
- ▶ For supply air
- ▶ For variable and constant volume flows
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity
- ▶ Discharge direction can be adjusted manually or with an actuator
- ▶ Ideal for high rooms

Optional equipment and accessories

- ▶ Exposed diffuser face available in RAL CLASSIC colours
- ▶ Horizontal or vertical duct connection
- ▶ An extended border improves the horizontal air discharge in cooling mode
- ▶ Protective cage for use in gyms
- ▶ Actuators for adjusting the air discharge direction

Application

- ▶ Type VD ceiling swirl diffusers are used as supply air diffusers for high rooms in comfort and industrial zones
- ▶ For production halls, gyms, theatres and conference rooms as well as for large internal spaces in airports, railway stations and shopping centres
- ▶ For mixed flow ventilation with different air patterns in heating and cooling modes
- ▶ Horizontal swirling supply air discharge in cooling mode
- ▶ The efficient swirl creates high induction levels, thereby rapidly reducing the temperature difference and airflow velocity
- ▶ Angled or vertical air discharge in heating mode
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -12 to +15 K
- ▶ For room heights exceeding 3.8 m
- ▶ With freely suspended installation, an extended border supports the horizontal air discharge in cooling mode

Variants

- ▶ Diffuser face only

Connection

- ▶ H: Horizontal duct connection
- ▶ V: Vertical duct connection

Accessories

- ▶ Electric actuators for adjusting the air discharge direction
- ▶ Extended border and protective cage

Useful additions

- ▶ TDC temperature difference control module

Special characteristics

- ▶ With adjustable air control blades for high rooms
- ▶ The air pattern can be adjusted manually or with an actuator
- ▶ Horizontal or vertical duct connection

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

All other RAL colours 70 %

Features

Circular ceiling swirl diffusers, with manual or motorised adjustment of the air pattern to ensure draught-free ventilation of the occupied zone both in heating and cooling modes

- ▶ Nominal sizes 315, 400, 630, 800
- ▶ Volume flow rate range 65 - 1080 l/s or 234 - 3888 m³/h
- ▶ Diffuser face made of galvanised, powder-coated sheet steel and of aluminium
- ▶ For supply air
- ▶ For variable and constant volume flows
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity
- ▶ Discharge direction can be adjusted manually or with an actuator
- ▶ Diffuser face with aerodynamically optimised contours
- ▶ Ideal for high rooms

Optional equipment and accessories

- ▶ Exposed diffuser face available in RAL CLASSIC colours
- ▶ Horizontal or vertical duct connection
- ▶ An extended border improves the horizontal air discharge in cooling mode
- ▶ Protective cage for use in gyms
- ▶ Actuators for adjusting the air discharge direction
- ▶ Diffuser face can be removed from the room side

Application

- ▶ Type VDL ceiling swirl diffusers are used as supply air diffusers for high rooms in comfort and industrial zones
- ▶ For production halls, gyms, theatres and conference rooms as well as for large internal spaces in airports, railway stations and shopping centres
- ▶ For mixed flow ventilation with different air patterns in heating and cooling modes
- ▶ Horizontal swirling supply air discharge in cooling mode
- ▶ The efficient swirl creates high induction levels, thereby rapidly reducing the temperature difference and airflow velocity
- ▶ Angled or vertical air discharge in heating mode
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -12 to +15 K
- ▶ For room heights exceeding 3.8 m
- ▶ With freely suspended installation, an extended border supports the horizontal air discharge in cooling mode

Variants

- ▶ A: Diffuser face without flange
- ▶ B: Diffuser face with flange

Connection

- ▶ **F:** Diffuser face only
- ▶ **H:** Horizontal duct connection, with plenum box
- ▶ **V:** Vertical duct connection, with plenum box

Diffuser face

- ▶ **N:** Non-removable diffuser face
- ▶ **D:** Removable diffuser face, only in variant with plenum box

Accessories

- ▶ Lip seal
- ▶ Electric actuators for adjusting the air discharge direction
- ▶ Extended border and protective cage

Useful additions

- ▶ TDC temperature difference control module

Special characteristics

- ▶ For high rooms, with adjustable air control blades
- ▶ Diffuser face with aerodynamically optimised contours
- ▶ The air pattern can be adjusted manually or with an actuator
- ▶ Horizontal or vertical duct connection

Features

Square ceiling swirl diffusers

- Nominal sizes 600, 625
- Volume flow rate range 51 - 365 l/s or 184 - 1314 m³/h
- Diffuser face made of galvanised sheet steel, powder-coated
- For supply and extract air
- For variable and constant volume flows
- For all types of ceiling systems
- High induction results in a rapid reduction of the temperature difference and airflow velocity

supply air or extract air diffusers for comfort zones

- Horizontal swirling supply air discharge for mixed flow ventilation
- The efficient swirl creates high induction levels, thereby rapidly reducing the temperature difference and airflow velocity (supply air variant)
- For variable and constant volume flows
- For supply air to room air temperature differences from -12 to +10 K
- For room heights up to 4.2 m (lower edge of suspended ceiling)
- For all types of ceiling systems

balancing

- MN: Pressure tap and cord-operated damper blade for volume flow rate balancing with the diffuser face in place

Accessories

- Lip seal

Special characteristics

- For high volume flow rates, with fixed air control blades
- High induction results in a rapid reduction of the supply air to room air temperature difference and airflow velocity
- For all types of ceiling systems
- Horizontal duct connection

ISO Standards and guidelines

- Sound power level of the air-regenerated noise measured according to EN ISO 5135

Application

- Type FDE ceiling swirl diffusers are used as

Variants

- FDE-Z: Supply air
- FDE-A: Extract air

Attachments

- M: Damper blade for volume flow rate

Technical data

Nominal sizes	600, 625 mm
Minimum volume flow rate, at -6 K	51 - 365 l/s or 184 - 1314 m ³ /h
Maximum volume flow rate, at approx. 50 dB(A)	330 - 365 l/s or 1188 - 1314 m ³ /h
Supply air to room air temperature difference	-12 to +10 K

Features

Circular and square ceiling swirl diffusers for high volume flow rates at low sound power levels and low differential pressure

- ▶ Nominal sizes 600, 625
- ▶ Volume flow rate range 31 - 265 l/s or 110 - 954 m³/h
- ▶ Diffuser face made of galvanised sheet steel, powder-coated
- ▶ For supply and extract air
- ▶ For variable and constant volume flows
- ▶ For all types of ceiling systems, and with an extended border also suitable for freely suspended installation
- ▶ Swirl unit inside for the best swirl effect and high induction levels
- ▶ Plenum box with acoustically optimised and lockable damper blade
- ▶ Ideal for comfort zones

Optional equipment and accessories

- ▶ Exposed diffuser face available in RAL CLASSIC colours

Application

- ▶ Type XARTO ceiling swirl diffusers are used as supply air or extract air diffusers for comfort zones
- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ Horizontal swirling supply air discharge for mixed flow ventilation
- ▶ The efficient swirl creates high induction levels, thereby rapidly reducing the temperature difference and airflow velocity (supply air variant)
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -12 to +10 K
- ▶ For room heights up to 4 m (lower edge of suspended ceiling)
- ▶ For all types of ceiling systems
- ▶ With an extended border also suitable for freely suspended installation (supply air variant)

Variants

- ▶ XARTO-Q*: Square diffuser face, square face style
- ▶ XARTO-R*: Square diffuser face, circular face style
- ▶ XARTO-C*: Circular diffuser face, circular face style
- ▶ XARTO-**-Z: Supply air
- ▶ XARTO-**-A: Extract air

Special characteristics

- ▶ For the most demanding requirements of technical function, comfort, and design
- ▶ Diffuser face in many different designs
- ▶ For all types of ceiling systems, and with an extended border also suitable for freely suspended installation
- ▶ Horizontal duct connection

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

For the creative design of ceilings in comfort zones, with fixed air control blades

Order code

ADD - Q - ZH - M - L / 600 / P1 - RAL ...

1 2 3 4 5 6 7

① Type

ADD Ceiling swirl diffuser

② Construction style

R Circular (not with nominal size 625)
Q Square

③ Connection

ZH Horizontal, supply air
ZV Vertical, supply air
AH Horizontal, extract air
AV Vertical, extract air

④ Damper blade for volume flow rate balancing

No entry: none

M With

Only for connections ZH and AH

MN With cords and pressure tap

⑤ Accessories

No entry: none

L With lip seal

⑥ Nominal size [mm]

**250, 300, 400, 450, 500, 600,
625 (nur ADD-Q)**

⑦ Exposed surface

No entry: powder-coated RAL 9010,
pure white

P1 Powder-coated, specify RAL CLASSIC
colour

Gloss level

RAL 9010 50 %

RAL 9006 30 %

All other RAL colours 70 %

Features

Circular and square ceiling swirl diffusers

- ▶ Nominal sizes 250, 300, 400, 450, 500, 600, 625
- ▶ Volume flow rate range 20 - 465 l/s or 72 - 1674 m³/h
- ▶ Diffuser face made of galvanised sheet steel, powder-coated
- ▶ For supply and extract air
- ▶ For variable and constant volume flows
- ▶ For all types of ceiling systems, and with an extended border also suitable for freely suspended installation
- ▶ Swirl unit inside for the best swirl effect and high induction levels
- ▶ Ideal for comfort zones

Optional equipment and accessories

- ▶ Exposed diffuser face available in RAL CLASSIC colours
- ▶ Horizontal or vertical duct connection
- ▶ Plenum box with cord-operated damper blade and pressure tap

Application

- ▶ Type ADD ceiling swirl diffusers are used as supply air or extract air diffusers for comfort zones
- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ Horizontal swirling supply air discharge for mixed flow ventilation
- ▶ The efficient swirl creates high induction levels, thereby rapidly reducing the temperature difference and airflow velocity (supply air variant)
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -12 to +10 K
- ▶ For room heights up to 4 m (lower edge of suspended ceiling)
- ▶ For all types of ceiling systems

Variants

- ▶ ADD-Q: Square diffuser face
- ▶ ADD-R: Circular diffuser face
- ▶ ADD-*Z: Supply air
- ▶ ADD-*A: Extract air

Connection

- ▶ H: Horizontal duct connection
- ▶ V: Vertical duct connection

Attachments

- ▶ **M:** Damper blade for volume flow rate balancing
- ▶ **MN:** Pressure tap and cord-operated damper blade for volume flow rate balancing with the diffuser face in place

Accessories

- ▶ Lip seal

Special characteristics

- ▶ For the creative design of ceilings in comfort zones
- ▶ Diffuser faces in many different designs
- ▶ For all types of ceiling systems, and with an extended border also suitable for freely suspended installation
- ▶ Horizontal or vertical duct connection

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

Nominal sizes	250, 300, 400, 450, 500, 600, 625 mm
Minimum volume flow rate, with $\Delta t_Z = -6 \text{ K}$	20 - 200 l/s or 72 - 720 m ³ /h
Maximum volume flow rate, with $L_{WA} \approx 50 \text{ dB(A)}$	70 - 465 l/s or 256 - 1674 m ³ /h
Supply air to room air temperature difference	-12 to +10 K

618

Installation type H

598

623

⑥ Nominal size [mm]

125, 160, 200, 250, 315, 400

⑦ Exposed surface

No entry: powder-coated RAL 9010, pure white

P1 Powder-coated, specify RAL CLASSIC colour

Gloss level

RAL 9010 50 %

RAL 9006 30 %

All other RAL colours 70 %

Features

Square ceiling swirl diffusers with perforated face plate, for comfort and industrial zones

- ▶ Nominal sizes 600, 625
- ▶ Volume flow rate range 4 - 260 l/s or 16 - 936 m³/h
- ▶ Perforated diffuser face made of galvanised sheet steel, powder-coated
- ▶ For supply and extract air
- ▶ For variable and constant volume flows
- ▶ For all types of ceiling systems, particularly for T-bar ceilings
- ▶ Swirl unit inside, 6 sizes, for the best swirl effect and high induction levels
- ▶ Ideal for comfort zones

Optional equipment and accessories

- ▶ Exposed diffuser face available in RAL CLASSIC colours
- ▶ Horizontal or vertical duct connection
- ▶ Plenum box with lining

Application

- ▶ Type DCS ceiling swirl diffusers are preferably used as supply air diffusers for comfort and industrial zones
- ▶ Perfect integration with suspended perforated sheet metal ceilings
- ▶ Horizontal swirling supply air discharge for mixed flow ventilation
- ▶ The efficient swirl creates high induction levels, thereby rapidly reducing the temperature difference and airflow velocity (supply air variant)
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences -12 to +10 K
- ▶ For room heights up to 4 m (lower edge of suspended ceiling)
- ▶ For T-bar ceilings

Variants

- ▶ DCS-P: Perforated diffuser face
- ▶ DCS-N: Unperforated diffuser face
- ▶ DCS-C: Diffuser face with exposed discharge nozzle

Installation type

- ▶ V: Exposed T-bars
- ▶ H: Concealed T-bars

Connection

- ▶ K: Vertical duct connection, with duct collar
- ▶ US: Vertical duct connection, with transition piece
- ▶ A: Horizontal duct connection, with plenum box
- ▶ AK: Horizontal duct connection, with plenum box and lining

Special characteristics

- ▶ Horizontal air discharge creating high induction levels
- ▶ Design variants with perforated square or circular diffuser face style
- ▶ For T-bar ceilings
- ▶ Horizontal or vertical duct connection

ISO

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

All other RAL colours 70 %

Features

Circular ceiling diffusers, with manual or motorised adjustment of the air discharge direction, particularly suitable for high rooms

- ▶ Nominal sizes 315, 400, 630, 800
- ▶ Volume flow rate range 175 - 1495 l/s or 630 - 5382 m³/h
- ▶ Diffuser face made of aluminium
- ▶ For supply air
- ▶ For variable and constant volume flows
- ▶ Discharge direction can be adjusted manually or with an actuator
- ▶ High penetration of air at low sound power level

Optional equipment and accessories

- ▶ Exposed diffuser face available in RAL CLASSIC colours
- ▶ Horizontal or vertical duct connection
- ▶ Actuators for adjusting the air discharge direction

- ▶ For mixed flow ventilation with different air patterns in heating and cooling modes
- ▶ Horizontal two-way supply air discharge in cooling mode
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity
- ▶ Angled or vertical air discharge in heating mode
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -10 to +15 K
- ▶ For room heights exceeding 3.8 m
- ▶ For suspended ceilings
- ▶ Freely suspended installation
- ▶ Ideal for use with TDC temperature difference control module

Attachments

- ▶ Electric actuators for adjusting the air discharge direction

Useful additions

- ▶ TDC temperature difference control module

Special characteristics

- ▶ High penetration of air at low sound power level
- ▶ Particularly suitable for rooms with varying heat loads
- ▶ Ideal adaptation of the air discharge pattern due to two sections of adjustable blades
- ▶ Discharge direction can be adjusted manually or with an actuator
- ▶ Plenum box with side entry or top entry spigot, and variant with electric actuator and inspection access

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Application

- ▶ Type VDR ceiling diffusers are used as supply air diffusers for high rooms in comfort and industrial zones

Technical data

Nominal sizes	315, 400, 630, 800 mm
Minimum volume flow rate	175 - 695 l/s or 630 - 2502 m ³ /h
Maximum volume flow rate, with L _{WA} ≈ 50 dB(A)	320 - 1495 l/s or 1152 - 5382 m ³ /h
Supply air to room air temperature difference	-10 to +15 K

RAL 9010 50 %

RAL 9006 30 %

All other RAL colours 70 %

Features

Square ceiling diffusers

- ▶ Nominal sizes 250, 300, 400, 500, 600, 625
- ▶ Volume flow rate range 20 - 665 l/s or 72 - 2394 m³/h
- ▶ Square diffuser face
- ▶ Diffuser face made of aluminium with anodised finish
- ▶ For supply and extract air
- ▶ For variable and constant volume flows
- ▶ For all types of ceiling systems
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity

Optional equipment and accessories

- ▶ Exposed diffuser face available in RAL CLASSIC colours
- ▶ Horizontal or vertical duct connection
- ▶ Blanking plates for adjusting the discharge direction
- ▶ Duct cross bar for installation without plenum box
- ▶ Plenum box with cord-operated damper blade and pressure tap

Application

- ▶ Type ADLQ ceiling diffusers are used as supply air or extract air diffusers for comfort zones
- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ Horizontal four-way supply air discharge for mixed flow ventilation
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity (supply air variant)
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -10 to +10 K
- ▶ For room heights up to 4 m (lower edge of suspended ceiling)
- ▶ For all types of ceiling systems

Variant

- ▶ Square diffuser face

Connection

- ▶ A: Diffuser face only
- ▶ AR: Vertical duct connection, with connecting frame

- ▶ AG: Vertical duct connection, with blades
- ▶ C: Vertical duct connection with butterfly damper
- ▶ AK: Horizontal duct connection, with plenum box

Accessories

- ▶ Lip seal

Special characteristics

- ▶ Horizontal four-way supply air discharge
- ▶ Diffuser face made of aluminium
- ▶ For all types of ceiling systems
- ▶ Horizontal or vertical duct connection

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

Nominal sizes	250, 300, 400, 500, 600, 625 mm
Minimum volume flow rate	20 - 250 l/s or 72 - 900 m ³ /h
Maximum volume flow rate, with L _{WA} ≈ 50 dB(A)	575 - 665 l/s or 2070 - 2394 m ³ /h
Supply air to room air temperature difference	-10 to +10 K

Features

Circular and square ceiling diffusers for radial air discharge, for high comfort levels, ideal integration into suspended ceilings

- ▶ Nominal sizes 1, 2, 3, 4, 5, 6, 7, 8
- ▶ Volume flow rate range 20 - 650 l/s or 72 - 2340 m³/h
- ▶ Circular or square diffuser face
- ▶ Diffuser face made of aluminium with anodised finish
- ▶ For supply and extract air
- ▶ For variable and constant volume flows
- ▶ For suspended continuous plasterboard or grid ceilings
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity

Optional equipment and accessories

- ▶ Exposed diffuser face available in RAL CLASSIC colours
- ▶ Horizontal or vertical duct connection
- ▶ Plenum box with cord-operated damper blade and pressure tap

Application

- ▶ Type ADLR ceiling diffusers are used as supply air or extract air diffusers for comfort zones
- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ Horizontal radial supply air discharge for mixed flow ventilation
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity (supply air variant)
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -10 to +10 K
- ▶ For room heights up to 4 m (lower edge of suspended ceiling)
- ▶ For suspended continuous plasterboard or grid ceilings

Variant

- ▶ Circular diffuser face
- ▶ Square diffuser face

Connection

- ▶ A: Diffuser face only
- ▶ AR: Vertical duct connection, with connecting frame

- ▶ C: Vertical duct connection with butterfly damper
- ▶ ZV: Vertical duct connection, with plenum box for supply air
- ▶ AV: Vertical duct connection, with plenum box for extract air
- ▶ ZH: Horizontal duct connection, with plenum box for supply air
- ▶ AH: Horizontal duct connection, with plenum box for extract air

Accessories

- ▶ Standard cross bar
- ▶ Duct cross bar
- ▶ Lip seal

Special characteristics

- ▶ Horizontal radial supply air discharge
- ▶ Diffuser face made of aluminium
- ▶ For suspended continuous plasterboard or grid ceilings
- ▶ Horizontal or vertical duct connection

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Features

Square ceiling diffusers

- ▶ Nominal sizes 250, 300, 400, 500, 600
- ▶ Volume flow rate range 6 - 285 l/s or 22 - 1026 m³/h
- ▶ Square diffuser face
- ▶ Diffuser face made of galvanised sheet steel, powder-coated
- ▶ For supply and extract air
- ▶ For variable and constant volume flows
- ▶ For all types of ceiling systems
- ▶ Perforated diffuser face with special baffle element for horizontal air discharge and high induction levels

Optional equipment and accessories

- ▶ Exposed diffuser face available in RAL CLASSIC colours
- ▶ Horizontal or vertical duct connection
- ▶ Blanking plates for adjusting the discharge direction
- ▶ Plenum box with damper blade

Application

Type DLQL ceiling diffusers are used as supply air or extract air diffusers for comfort zones

- ▶ Perfect integration with suspended perforated sheet metal ceilings
- ▶ Horizontal one-way to four-way supply air discharge for mixed flow ventilation
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity (supply air variant)
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -10 to +10 K
- ▶ For room heights up to 4 m (lower edge of suspended ceiling)
- ▶ For all types of ceiling systems

Variants

- ▶ DLQL-P: Grid ceilings and continuous plasterboard ceilings
- ▶ DLQL-T: T-bar ceilings
- ▶ DLQL-*Z: Supply air
- ▶ DLQL-*A: Extract air

Connection

- ▶ H: Horizontal duct connection
- ▶ V: Vertical duct connection

Attachments

- ▶ M: Damper blade for volume flow rate balancing with horizontal connection

Accessories

- ▶ Lip seal

Useful additions

- ▶ Blanking plates

Special characteristics

- ▶ Horizontal one-way to four-way supply air discharge
- ▶ Perforated diffuser face made of galvanised sheet steel
- ▶ For all types of ceiling systems
- ▶ Horizontal or vertical duct connection

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

Nominal sizes - ceiling tile	248, 298, 398, 498, 593, 598, 618, 623 mm
Nominal sizes - diffuser	250, 300, 400, 500, 600 mm
Minimum volume flow rate	6 - 145 l/s or 22 - 522 m ³ /h
Maximum volume flow rate, with L _{WA} ≈ 50 dB(A)	275 - 285 l/s or 990 - 1026 m ³ /h
Supply air to room air temperature difference	-10 to +10 K

Features

Square ceiling diffusers

- ▶ Nominal sizes 300, 400, 500, 600, 625
- ▶ Volume flow rate range 40 - 565 l/s or 144 - 2034 m³/h
- ▶ Square diffuser face
- ▶ Diffuser face made of galvanised sheet steel, powder-coated
- ▶ For supply air
- ▶ For variable and constant volume flows
- ▶ For all types of ceiling systems
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity

Optional equipment and accessories

- ▶ Exposed diffuser face available in RAL CLASSIC colours
- ▶ Horizontal duct connection
- ▶ Plenum box with damper blade

Application

- ▶ Type DLQ-AK ceiling diffusers are used as supply air diffusers for comfort zones
- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ Horizontal one-way to four-way supply air discharge for mixed flow ventilation
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity (supply air variant)
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -10 to +10 K
- ▶ For room heights up to 4 m (lower edge of suspended ceiling)
- ▶ For all types of ceiling systems

corners

- ▶ DLQ-AK-3: Three-way air discharge
- ▶ DLQ-AK-4: Four-way air discharge

Attachments

- ▶ **M:** Damper blade for volume flow rate balancing

Special characteristics

- ▶ Horizontal one-way to four-way supply air discharge
- ▶ Diffuser face made of formed sheet steel, powder-coated
- ▶ For all types of ceiling systems
- ▶ Spigot side can be selected
- ▶ Horizontal duct connection

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

Nominal sizes	300, 400, 500, 600, 625 mm
Minimum volume flow rate	40 - 150 l/s or 144 - 540 m ³ /h

For horizontal four-way air discharge, with integral fire barrier for mineral fibre false ceilings, with fixed air control blades

Order code	DLK – Fb / 625 / P1 – RAL ...		
[1] Type	[2]	[3]	

[1] Type
DLK-Fb Ceiling diffuser

[2] Nominal size [mm]
600, 625

[3] Exposed surface
No entry: powder-coated RAL 9010,
pure white
P1 Powder-coated, specify RAL CLASSIC
colour

Gloss level
RAL 9010 50 %
RAL 9006 30 %
All other RAL colours 70 %

Features

Square ceiling diffusers for Odenwald false ceilings, to ensure fire integrity in the event of a fire on the room side

- ▶ Nominal sizes 600, 625
- ▶ Volume flow rate range 220 - 460 l/s or 792 - 1656 m³/h
- ▶ Square diffuser face
- ▶ Diffuser face made of galvanised sheet steel, powder-coated
- ▶ Automatic release at 72 °C in the event of a fire
- ▶ For supply and extract air
- ▶ For variable and constant volume flows
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity

Optional equipment and accessories

- ▶ Exposed diffuser face available in RAL CLASSIC colours
- ▶ Horizontal duct connection

Application

- ▶ Type DLK-Fb ceiling diffusers with integral fire barrier are used as supply air or extract air diffusers for comfort zones
- ▶ For fire integrity in the event of a fire on the room side (DIN 4102-2, clause 7.2.1.)
- ▶ Max. fire load in the false ceiling void: 7 kWh/m²
- ▶ Release in the event of a fire is by fusible link
- ▶ Horizontal four-way supply air discharge for mixed flow ventilation
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity (supply air variant)
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -10 to +10 K
- ▶ For room heights up to 4 m (lower edge of suspended ceiling)
- ▶ For installation into mineral fibre false ceilings made by Odenwald
- ▶ Important! Type DLK-Fb ceiling diffusers are not approved for self-supporting fire-resistant false ceilings; for such ceilings, Type KU-K30 fire dampers or Type FVZ-K30 fire protection valves must be used

EN Classification

- ▶ Fire resistance class according to certificate 80764-M1/Schu
- ▶ Suspended ceilings combined with steel girder ceilings, F90
- ▶ Suspended ceilings combined with steel reinforced concrete ceilings, F90
- ▶ Suspended ceilings combined with wooden beam ceilings, F30

Special characteristics

- ▶ Horizontal four-way supply air discharge
- ▶ Diffuser face made of galvanised sheet steel
- ▶ With integral fire barrier for mineral fibre false ceilings
- ▶ Horizontal duct connection

ISO Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

Nominal sizes	600, 625 mm
Minimum volume flow rate	220 - 380 l/s or 792 - 1368 m ³ /h
Maximum volume flow rate, with L _{WA} ≈ 50 dB(A)	300 - 460 l/s or 1080 - 1656 m ³ /h
Supply air to room air temperature difference	-10 to +10 K

No entry: none
L With lip seal

Features

Plenum boxes for supply air and extract air

- ▶ For circular and square diffuser faces
- ▶ Plenum box made of galvanised sheet steel
- ▶ For supply and extract air
- ▶ For all types of ceiling systems
- ▶ Horizontal duct connection
- ▶ Equalising element that ensures a uniform airflow through the diffuser face (supply air variant)
- ▶ For comfort zones and industrial zones

Optional equipment and accessories

- ▶ Damper blade for volume flow rate balancing
- ▶ Pressure tap and cord-operated damper blade for volume flow rate balancing
- ▶ Lip seal

Application

- ▶ Type AK-Uni plenum boxes for the connection of circular and square diffuser faces to circular ducts, suitable for supply air or extract air applications in comfort and industrial zones
- ▶ For diffuser faces of Types VDW, TDV, RFD, FD, TDF, ADD, ADLQ, DLQ, ADLR, and DLQL, with central screw fixing
- ▶ For variable and constant volume flows
- ▶ For all types of ceiling systems

Attachments

- ▶ M: Damper blade for volume flow rate balancing
- ▶ MN: Pressure tap and cord-operated damper blade for volume flow rate balancing with the diffuser face in place

Accessories

- ▶ Lip seal

Special characteristics

- ▶ Plenum box made of galvanised sheet steel
- ▶ For all types of ceiling systems
- ▶ For circular and square diffuser faces
- ▶ Horizontal duct connection
- ▶ For comfort zones and industrial zones

List of abbreviations

L_{WA} [dB(A)]	A-weighted sound power level of air-regenerated noise
\dot{V} [m^3/h] and [l/s]	Volume flow rate
Δt_z [K]	Supply air to room air temperature difference, i.e. supply air temperature minus room temperature
Δp_t [Pa]	Total differential pressure
A_{eff} [m^2]	Effective air discharge area
$\emptyset D$ [mm]	Outer diameter of the spigot
$\emptyset D_1$ [mm]	Outer diameter of a circular diffuser face
$\emptyset D_2$ [mm]	Diameter of a circular diffuser face style
$\emptyset D_3$ [mm]	Diameter of a circular plenum box
Q_1 [mm]	Outer diameter of a square diffuser face
Q_2 [mm]	Dimensions of a square diffuser face style
Q_3 [mm]	Dimensions of a square plenum box
H_1 [mm]	Distance (height) from the lower edge of the suspended ceiling to the lower edge of the diffuser face
H_2 [mm]	Height of a ceiling diffuser, from the lower edge of the suspended ceiling to the upper edge of the spigot
H_3 [mm]	Height of a ceiling diffuser with plenum box, from the lower edge of the suspended ceiling to the upper edge of the plenum box or of the spigot
A [mm]	Position of the spigot, defined by the distance of the spigot centre line to the lower edge of the suspended ceiling
C [mm]	Length of the spigot
m [kg]	Weight

All sound power levels are based on 1 pW.

Particularly slim diffuser face, available in numerous variants for many different installation situations

Features

Slot diffusers with 18 mm diffuser face (nominal width) and adjustable air control elements

- ▶ Nominal length 600 - 2000 mm (length of air control element 100 mm), 1 or 2 slots
- ▶ Volume flow rate range 5 - 84 l/s or 17 - 302 m³/h
- ▶ Individually adjustable air control elements for horizontal, angled or vertical air discharge
- ▶ One-way or alternating air discharge meets individual local requirements
- ▶ Uniform air pattern reduces contamination of the ceiling due to the induction of room air
- ▶ Air control elements have grooves that allow for precise positioning

Optional equipment and accessories

- ▶ Attractive appearance due to extruded aluminium sections with anodised finish or powder coating
- ▶ Symmetric or asymmetric position of plenum box
- ▶ Plenum box with lining
- ▶ End plates, end angles, corner sections
- ▶ Different looks due to choice of black, grey or white air control elements

Application

- ▶ Type PureLine18 slot diffusers are used as supply air or extract air devices in comfort zones
- ▶ Particularly unobtrusive diffuser due to its sleek design
- ▶ Installation into suspended ceilings

- ▶ For room heights up to 4 m (lower edge of suspended ceiling)
- ▶ For suspended ceilings; suitable for restricted ceiling voids due to the low overall height of the plenum box
- ▶ Suitable for continuous linear arrangement
- ▶ Adjustable air control elements allow for horizontal, angled or vertical air discharge
- ▶ Mixed flow system with one-way or alternating air discharge, can be adapted to the building structure
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity (supply air variant)
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -10 to +10 K

Variants

- ▶ PL18-*: 1 or 2 slots
- ▶ PL18-*DF: Diffuser face with spring clip
- ▶ PL18-*DS: Diffuser face with extended border (B00) and screw fixing
- ▶ PL18-*PB: Plenum box for screw fixing
- ▶ PL18-*PF: Diffuser face and plenum box, non-detachable fixing
- ▶ PL18-*SF: Diffuser face and plenum box, detachable fixing
- ▶ PL18-*CS: Corner section

Position of plenum box on the front diffuser

- ▶ Central position
- ▶ On the left (LE)
- ▶ On the right (RI)

Plenum box variant

- ▶ Symmetric position of plenum box, side entry spigot (HS)
- ▶ Symmetric position of plenum box, top entry spigot (VS)
- ▶ Asymmetric position of plenum box, side entry spigot (HA)

Construction

Diffuser face finish

- ▶ Anodised, E6-C-0, natural colour
- ▶ P1: Powder-coated RAL 9010, pure white, gloss level 50%
- ▶ P1: Powder-coated RAL 9006, white aluminium, gloss level 30%
- ▶ P1: Powder-coated in any other RAL CLASSIC colour, gloss level 70%

Attachments

- ▶ D: Damper blade for volume flow rate balancing
- ▶ LS: Lip seal
- ▶ L: Internal insulation
- ▶ EP: Two end plates
- ▶ EA: Two end angles

Single diffusers are factory fitted with end plates or end angles.

Accessories

- ▶ EP: Two end plates
- ▶ EA: Two end angles

For a continuous linear arrangement the end plates or end angles have to be ordered separately and fitted by others.

Special characteristics

- ▶ Uniform air pattern reduces contamination of the ceiling due to the induction of room air
- ▶ Horizontal, angled or vertical air discharge by means of manually adjustable air control elements
- ▶ Comfortable indoor air climate due to high induction and rapid reduction of temperature differences and airflow velocities
- ▶ High-quality look thanks to anodised extruded aluminium sections (E6-C-0, natural colour) or powder coating (RAL CLASSIC colour)
- ▶ Diffuser face has been optimised for maximum volume flow rate at low sound power levels
- ▶ Suitable for continuous linear arrangement

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

Nominal length	600 - 2000 mm, in increments of 100 mm											
Number of slots	1 or 2											
Minimum volume flow rate, with $\Delta t_z = -10 \text{ K}$	5 l/s or 17 m^3/h											
Maximum volume flow rate, with $L_{WA} \cong 50 \text{ dB(A)}$	84 l/s or 302 m^3/h											
Supply air to room air temperature difference	-10 to +10 K											

PL18-1, supply air, alternating horizontal air discharge, sound power level and total differential pressure

③ System S Supply air E Extract air		⑬ Extended border No entry: none B00 With (B00)	
④ Connection DF Diffuser face with extended border (B00) and spring clip CS 90° corner section only Plenum box PB Plenum box only PF Diffuser face fixed to the plenum box, non-detachable SF Diffuser face fixed to the plenum box, detachable (only with B00) DS Diffuser face with extended border (B00) and fixing screws		⑭ End pieces No entry: none EP End plate EA End angle	
⑤ Plenum box construction variant HS Standard plenum box VS Standard plenum box with top entry spigot HA Assymetric plenum box with side entry spigot		⑮ Surface No entry: anodised, E6-C-0, natural colour P1 Powder-coated, specify RAL CLASSIC colour	
		⑯ Colour of air control elements No entry: similar to RAL 9005, black W Similar to RAL 9010, white G Similar to RAL 9006, grey	

Features

- Slot diffusers with 35 mm diffuser face (nominal width) and adjustable air control elements
- ▶ Nominal length 600 - 1950 mm (length of air control element 150 mm), 1 to 4 slots
 - ▶ Volume flow rate range 7 - 197 l/s or 27 - 709 m³/h
 - ▶ Individually adjustable air control elements for horizontal, angled or vertical air discharge
 - ▶ One-way or alternating air discharge meets individual local requirements
 - ▶ Uniform air pattern reduces contamination of the ceiling due to the induction of room air
 - ▶ Air control elements have grooves that allow for precise positioning

Optional equipment and accessories

- ▶ Attractive appearance due to extruded aluminium sections with anodised finish or powder coating (RAL CLASSIC colour)
- ▶ Symmetric or asymmetric position of plenum box
- ▶ Plenum box with lining
- ▶ End plates, end angles, corner sections
- ▶ Different looks due to choice of black, grey or white air control elements

Application

- ▶ Type PureLine35 slot diffusers are used as supply air or extract air devices in comfort zones
- ▶ The many variants allow for flexible use as mixed ventilation systems and make them suitable for different applications

- ▶ Unobtrusive integration into suspended ceilings
- ▶ For room heights up to 4 m (lower edge of suspended ceiling)
- ▶ For suspended ceilings; suitable for restricted ceiling voids due to the low overall height of the plenum box
- ▶ Suitable for continuous linear arrangement
- ▶ Adjustable air control elements allow for horizontal, angled or vertical air discharge
- ▶ One-way or alternating air discharge can be set on site to meet local requirements
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity (supply air variant)
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -10 to +10 K

Variants

- ▶ PL35-*: 1 to 4 slots
- ▶ PL35-*-DF: Diffuser face only
- ▶ PL35-*-DS: Diffuser face with extended border (B00) and screw fixing
- ▶ PL35-*-PB: Plenum box only
- ▶ PL35-*-PF: Diffuser face and plenum box, non-detachable fixing
- ▶ PL35-*-SF: Diffuser face and plenum box, detachable fixing
- ▶ PL35-*-CS: 90° corner section

Position of plenum box if combined with a slot diffuser

- ▶ Central position
- ▶ On the left (LE)
- ▶ On the right (RI)

Plenum box variant

- ▶ Symmetric position of plenum box, side entry spigot (HS)
- ▶ Symmetric position of plenum box, top entry spigot (VS)
- ▶ Asymmetric position of plenum box, side entry spigot (HA)

Construction

- Diffuser face finish
- ▶ Anodised, E6-C-0, natural colour
 - ▶ P1: Powder-coated RAL 9010, pure white, gloss level 50%
 - ▶ P1: Powder-coated RAL 9006, white aluminium, gloss level 30%
 - ▶ P1: Powder-coated in any other RAL CLASSIC colour, gloss level 70%

Attachments

- ▶ D: Damper blade for volume flow rate balancing
- ▶ LS: Lip seal
- ▶ L: Internal insulation
- ▶ EP: Two end plates
- ▶ EA: Two end angles

Single diffusers are factory fitted with end plates or end angles.

Accessories

- ▶ EP: Two end plates
- ▶ EA: Two end angles

For a continuous linear arrangement the end plates or end angles have to be ordered separately and fitted by others.

Special characteristics

- ▶ Uniform air pattern reduces contamination of the ceiling due to the induction of room air
- ▶ Horizontal, angled or vertical air discharge by means of manually adjustable air control elements
- ▶ Comfortable indoor climate due to high induction and rapid reduction of temperature differences and airflow velocities
- ▶ Attractive appearance due to extruded aluminium sections with anodised finish or powder coating (RAL CLASSIC colour)
- ▶ Diffuser face has been optimised for maximum volume flow rate at low sound power levels
- ▶ Suitable for continuous linear arrangement

ISO Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

Nominal length	600 - 1950 mm, in increments of 150 mm											
Number of slots	1, 2, 3 or 4											
Neck extension	30, 55, 80, 105, 129											
Minimum volume flow rate, with $\Delta t_z = -10 \text{ K}$	7 l/s or 27 m ³ /h											
Maximum volume flow rate, with $L_{WA} \approx 50 \text{ dB(A)}$	197 l/s or 709 m ³ /h											
Supply air to room air temperature difference	-10 to +10 K											

PL35-1, supply air, alternating horizontal air discharge, sound power level and total differential pressure

With slim diffuser face

Order code

VSD15 - A - M - Z0 - L / 900 / CA / P1 - RAL ... / WS / WW

1 2 3 4 5 6 7 8 9 10

1 Type

VSD15 Slot diffuser

2 Connection

F	Diffuser face only
A	Plenum box
D	Plenum box with lining

Diffusers with a shorter plenum box as well as non-active diffusers require a rear blanking plate
Length of blanking plate = $L_1 - L_3$

3 Damper blade for volume flow rate balancing

No entry: none	
M	With

4 Extended border

No entry: none	
Z0	With extended border

5 Accessories

No entry: none	
L	With lip seal

6 Nominal size [mm]

Nominal length L_N
600, 700, 800, 900, 1000, 1100, 1200, 1300, 1400, 1500

7 End pieces

No entry: none	
A9	End seals on both ends (VSD15)
CA	End angles on both ends (VSD15-Z0) To be ordered separately for slot diffusers for linear arrangement

8 Exposed surface

No entry: VSD15 powder-coated
RAL 9005, black
VSD15-Z0 with anodised finish E6-C-0, natural colour

P1

Powder-coated, specify RAL CLASSIC colour

Gloss level

RAL 9010 50 %

RAL 9006 30 %

All other RAL colours 70 %

9 Air pattern

No entry: alternating horizontal (WH)

WS Alternating angled

HL Horizontal left (opposite direction from spigot)

HR Horizontal right (same direction as spigot)

10 Colour of air control elements

No entry: similar to RAL 9005, black

WW Similar to RAL 9010, white

+ Features

Slot diffusers with 15 mm diffuser face (nominal width) and adjustable air control elements

- Nominal lengths from 600 to 1500 mm, 1 slot
- Volume flow rate range from 7 to 30 (l/s)/m or 25 to 108 (m^3/h)/m
- Diffuser face made of extruded aluminium sections
- For variable and constant volume flows
- Suitable for continuous linear arrangement
- High induction results in a rapid reduction of the temperature difference and airflow velocity
- Individually adjustable air control elements to meet individual local requirements

Optional equipment and accessories

- Exposed diffuser face available in RAL CLASSIC colours
- Diffuser face with extended border
- Damper blade for volume flow rate balancing, can be adjusted through the diffuser face
- Plenum box with lining
- End angle, end seal
- White air control elements

X Application

- Type VSD15 slot diffusers are used as supply air or extract air devices in comfort zones
- Air discharge is one-way or alternating horizontal, or alternating angled; turbulent flow (mixed flow ventilation)
- High induction results in a rapid reduction of the temperature difference and airflow velocity (supply air variant)
- For variable and constant volume flows
- For supply air to room air temperature differences from -10 to +10 K
- For room heights up to 4 m (lower edge of suspended ceiling)
- For suspended ceilings; suitable for restricted ceiling voids due to the low overall height of the plenum box
- Ideal for suspended panelled ceilings with standard 16 mm gaps
- Suitable for continuous linear arrangement

○ Variants

- VSD15-F: Diffuser face only
- VSD15-...: Diffuser face without extended border
- VSD15-...-Z0: Diffuser face with extended

border

► VSD15-...: Black air control elements

► VSD15-.../WW: White air control elements

Connection

- **A:** Plenum box
- **D:** Plenum box with lining

◎ Attachments

- **M:** Damper blade for volume flow rate balancing
- **A9:** End seal (only for diffuser face without extended border)
- **CA:** End angle (only for diffuser face with extended border Z0)

& Accessories

- Lip seal

H Useful additions

- ED: Two end seals (only for diffuser face without extended border)
- EW: Two end angles (only for diffuser face with extended border Z0)
- To be ordered separately for continuous linear runs

Special characteristics

- Individually adjustable air control elements to meet individual local requirements
- High induction results in a rapid reduction of the temperature difference and airflow

velocity
 ▶ Ideal for suspended panelled ceilings with standard 16 mm gaps
 ▶ Suitable for continuous linear arrangement

Standards and guidelines

- Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

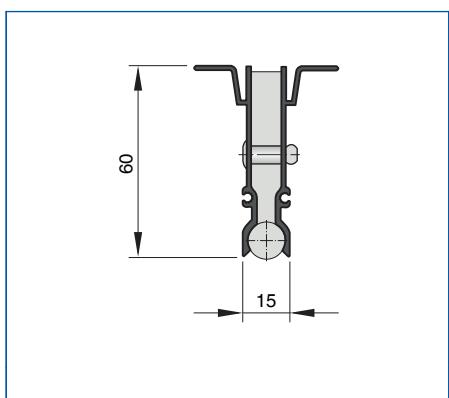

Nominal length	600, 700, 800, 900, 1000, 1100, 1200, 1300, 1400, 1500 mm							
Number of slots	1							
Minimum volume flow rate	7 (l/s)/m or 25 (m³/h)/m							
Maximum volume flow rate, with $L_{WA} \leq 50$ dB(A)	30 (l/s)/m or 108 (m³/h)/m							
Supply air to room air temperature difference	-10 to +10 K							

VSD15, supply air, alternating horizontal air discharge, sound power level and total differential pressure

Numerous variants for many different installation situations

Order code

VSD35 – 1 – AK – M – L / 900x98x30 / C2 / B00 / P1 – RAL ... / WS / WW

1 2 3 4 5 6 7 8 9 10 11

① Type

VSD35 Slot diffuser

② Number of slots

1
2
3
4

③ Connection

F Diffuser face only
E 90° corner section only
Plenum box
AK With clamp fixing
DK With lining and clamp fixing
AS With concealed screw fixing
DS With lining and concealed screw fixing
AA Asymmetric and with clamp fixing

Diffusers with a shorter plenum box as well as non-active diffusers require a rear blanking plate

④ Damper blade for volume flow rate balancing

No entry: none

M With

⑤ Accessories

No entry: none
L With lip seal

⑥ Nominal size [mm]

Nominal length L_N
600, 750, 900, 1050, 1200, 1350, 1500,
1650, 1800, 1950

Specify ØD and Y only for AK, DK, AS,
DS and AA
Up to L_N 1500 with one spigot, from
 L_N 1650 with two spigots
spigot diameter ØD
98 1 slot
123 1 or 2 slots
138 2 or 3 slots
158 3 or 4 slots
198 4 slots
Neck extension Y
No entry: 0
30
55
80
105
129
(129 only AK, DK and AA)

⑦ End pieces

No entry: without
Both ends with end angles factory
fitted
C1 to profile 000
C2 to profile B00
Both ends with end plates factory fitted

C5 to profile 000

C6 to profile B00

To be ordered separately for slot diffusers for linear arrangement

⑧ Extended border

No entry: without (only AK, DK, AA)
B00 With extended border

⑨ Exposed surface

No entry: anodised, E6-C-0, natural colour

P1 Powder-coated, specify RAL CLASSIC colour

Gloss level

RAL 9010 50 %

RAL 9006 30 %

All other RAL colours 70 %

⑩ Air pattern

No entry: alternating horizontal (WH)

WS Alternating angled

HL Horizontal left (opposite direction from spigot)

HR Horizontal right (same direction as spigot)

⑪ Colour of air control elements

No entry: similar to RAL 9005, black

WW Similar to RAL 9010, white

Features

Slot diffusers with 35 mm diffuser face (nominal width) and adjustable air control elements
► Nominal length from 600 to 1950 mm, 1 to 4 slots
► Volume flow rate range 15 - 135 (l/s)/m or 54 - 486 (m³/h)/m
► Diffuser face made of extruded aluminium sections
► For variable and constant volume flows
► Suitable for continuous linear arrangement
► High induction results in a rapid reduction of the temperature difference and airflow velocity
► Individually adjustable air control elements to meet individual local requirements

Optional equipment and accessories

- Exposed diffuser face available in RAL CLASSIC colours
- Diffuser face with extended border
- Damper blade for volume flow rate balancing, can be adjusted through the diffuser face
- Concealed screw fixing that simplifies installation of the diffuser after the ceiling has been completed
- Symmetric and asymmetric plenum boxes, with or without lining
- End plates, end angles, corner sections

zones

- They blend in inconspicuously with continuous grid ceilings and plasterboard ceilings
- Air discharge is one-way or alternating horizontal, or alternating angled; turbulent flow (mixed flow ventilation)
- High induction results in a rapid reduction of the temperature difference and airflow velocity (supply air variant)
- For variable and constant volume flows
- For supply air to room air temperature differences from -10 to +10 K
- For room heights up to 4 m (lower edge of suspended ceiling)
- For suspended ceilings; suitable for restricted ceiling voids due to the low overall height of the plenum box
- Suitable for continuous linear arrangement

Application

Type VSD35 slot diffusers are used as supply air or extract air devices in comfort

**Variants**

- VSD35-*: 1, 2, 3 or 4 slots
- VSD35-*F: Diffuser face only
- VSD35-*E: Corner section
- VSD35-...: Diffuser face without extended border
- VSD35-.../B00: Diffuser face with extended border
- VSD35-...: Black air control elements
- VSD35-.../WW: White air control elements

Plenum box and diffuser face fixing

- AK: Plenum box and clamp fixing
- DK: Plenum box with lining and clamp fixing
- AS: Plenum box and concealed screw fixing
- DS: Plenum box with lining and concealed screw fixing
- AA: Asymmetric plenum box and clamp fixing

**Attachments**

- M: Damper blade for volume flow rate balancing
- C1, C2: Two end plates
- C5, C6: Two end angles

**Accessories**

- Lip seal

**Useful additions**

- EP: Two end plates
- EW: Two end angles
- To be ordered separately for continuous linear runs

**Special characteristics**

- Individually adjustable air control elements to meet individual local requirements
- High induction results in a rapid reduction of the temperature difference and airflow velocity
- Diffuser face has been optimised for maximum volume flow rate at low sound power levels
- Suitable for continuous linear arrangement

**Standards and guidelines**

- Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

Nominal length	600, 750, 900, 1050, 1200, 1350, 1500, 1650, 1800, 1950 mm											
Number of slots	1, 2, 3, 4											
Neck extension	0, 30, 55, 80, 104, 105, 129 mm											
Minimum volume flow rate	15 - 50 (l/s)/m or 54 - 180 (m³/h)/m											
Maximum volume flow rate with $L_{WA} \approx 50$ dB(A)	45 - 135 (l/s)/m or 162 - 486 (m³/h)/m											
Supply air to room air temperature difference	-10 to +10 K											

VSD35-1, supply air, alternating horizontal air discharge, sound power level and total differential pressure

With wide diffuser face for larger volume flow rates

Order code

VSD50 – 1 – AK – M – L / 900x123x25 / C2 / B00 / P1 – RAL ... / WS / WW

1 2 3 4 5 6 7 8 9 10 11

[1] Type

VSD50 Slot diffuser

[2] Number of slots

1

[3] Connection

F Diffuser face only

E 90° corner section only

Plenum box

AK With clamp fixing

DK With lining and clamp fixing

AS With concealed screw fixing

DS With lining and concealed screw fixing

AA Asymmetric and with clamp fixing

Diffusers with a shorter plenum box as well as non-active diffusers require a rear blanking plate

Length of blanking plate = $L_1 - L_3$

[4] Damper blade for volume flow rate balancing

No entry: none

M With

[5] Accessories

No entry: none

L With lip seal

[6] Nominal size [mm]

Nominal length L_N
600, 750, 900, 1050, 1200, 1350, 1500,
1650, 1800, 1950

Specify ØD and Y only for AK, DK, AS,

DS and AA

Up to L_N 1500 with one spigot, from
 L_N 1650 with two spigots
spigot diameter ØD

75

100

125

(125 only AK, DK and AA)

[7] End pieces

No entry: without
Both ends with end angles factory fitted

C1 to profile 000

C2 to profile B00

Both ends with end plates factory fitted
to profile 000

[C6] to profile B00

To be ordered separately for slot
diffusers for linear arrangement

[8] Extended border

No entry: without (only AK, DK, AA)
B00 With extended border

[9] Exposed surface

No entry: anodised, E6-C-0, natural
colour

P1 Powder-coated, specify RAL CLASSIC
colour

Gloss level

RAL 9010 50 %

RAL 9006 30 %

All other RAL colours 70 %

[10] Air pattern

No entry: alternating horizontal (WH)

WS Alternating angled

HL Horizontal left (opposite direction from
spigot)

HR Horizontal right (same direction as
spigot)

[11] Colour of air control elements

No entry: similar to RAL 9005, black

WW Similar to RAL 9010, white

Features

Slot diffusers with 50 mm diffuser face (nominal width) and adjustable air control elements

► Nominal length from 600 to 1950 mm, 1 to 2 slots

► Volume flow rate range 20 - 120 (l/s)/m or 72 - 432 (m³/h)/m

► Diffuser face made of extruded aluminium sections

► For variable and constant volume flows

► Suitable for continuous linear arrangement

► High induction results in a rapid reduction of the temperature difference and airflow velocity

► Individually adjustable air control elements to meet individual local requirements

Optional equipment and accessories

► Exposed diffuser face available in RAL CLASSIC colours

► Diffuser face with extended border

► Damper blade for volume flow rate balancing, can be adjusted through the diffuser face

► Concealed screw fixing that simplifies installation of the diffuser after the ceiling has been completed

► Symmetric and asymmetric plenum boxes, with or without lining

► End plates, end angles, corner sections

zones

► Air discharge is one-way or alternating horizontal, or alternating angled; turbulent flow (mixed flow ventilation)

► High induction results in a rapid reduction of the temperature difference and airflow velocity (supply air variant)

► For variable and constant volume flows

► For supply air to room air temperature differences from -10 to +10 K

► For room heights up to 4 m (lower edge of suspended ceiling)

► For suspended ceilings; suitable for restricted ceiling voids due to the low overall height of the plenum box

► Suitable for continuous linear arrangement

Application

► Type VSD50 slot diffusers are used as supply air or extract air devices in comfort

Variants

- VSD50-*: 1 or 2 slots
- VSD50-*F: Diffuser face only
- VSD50-*E: Corner section
- VSD50-...: Diffuser face without extended border
- VSD50-.../B00: Diffuser face with extended border
- VSD50-...: Black air control elements
- VSD50-.../WW: White air control elements

Plenum box and diffuser face fixing

- AK: Plenum box and clamp fixing
- DK: Plenum box with lining and clamp fixing
- AS: Plenum box and concealed screw fixing
- DS: Plenum box with lining and concealed screw fixing
- AA: Asymmetric plenum box and clamp fixing

Attachments

- M: Damper blade for volume flow rate balancing
- C1, C2: Two end plates
- C5, C6: Two end angles

Accessories

- Lip seal

Useful additions

- EP: Two end plates
- EW: Two end angles
- To be ordered separately for continuous linear runs

Special characteristics

- Individually adjustable air control elements to meet individual local requirements
- High induction results in a rapid reduction of the temperature difference and airflow velocity
- Diffuser face has been optimised for maximum volume flow rate at low sound power levels
- Suitable for continuous linear arrangement

Standards and guidelines

- Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

Nominal length	600, 750, 900, 1050, 1200, 1350, 1500, 1650, 1800, 1950 mm											
Number of slots	1, 2											
Neck extension	0, 25, 50, 75, 100, 125 mm											
Minimum volume flow rate	20 - 40 (l/s)/m or 72 - 144 (m ³ /h)/m											
Maximum volume flow rate, with L _{WA} ≈ 50 dB(A)	70 - 120 (l/s)/m or 252 - 432 (m ³ /h)/m											
Supply air to room air temperature difference	-10 to +10 K											

VSD50-1, supply air, alternating horizontal air discharge, sound power level and total differential pressure

[4] Accessories

Features

Slot diffusers with 50 mm diffuser face (nominal width) and adjustable air control elements
Nominal length: 550, 1175 mm, 1 slot
Volume flow rate range 10 - 70 l/s or 36 - 252 m³/h
Diffuser face made of extruded aluminium sections
For variable and constant volume flows
Installation into lightweight partition walls with a 50 mm wide metal support structure and a wall thickness of 100 mm
Diffuser face with spring clip fixing
High induction results in a rapid reduction of the temperature difference and airflow velocity
Individually adjustable air control elements to meet individual local requirements

Optional equipment and accessories

- Exposed diffuser face available in RAL CLASSIC colours
- Damper blade for volume flow rate balancing, can be adjusted through the diffuser face

Application

- Type VSD50-1-LT slot diffusers are used as supply air or extract air devices or as supply and extract air combinations in comfort zones
- Angled one-way air discharge for turbulent flow (mixed flow ventilation)
- High induction results in a rapid reduction of the temperature difference and airflow velocity (supply air variant)
- For variable and constant volume flows
- For supply air to room air temperature differences from -10 to +10 K
- For room heights up to 4 m (lower edge of suspended ceiling)
- For the space saving installation into lightweight partition walls with a 50 mm wide metal support structure and a wall thickness of 100 mm

Variants

- VSD50-1-LT: Slot diffuser for supply air or extract air
- VSD50-1-LT-AZ: Slot diffuser as a supply and extract air combination (only LN 1175 mm)
- VSD50-1-LT.../WW: White air control elements

Attachments

- Damper blade for volume flow rate balancing

Accessories

- Lip seal

Special characteristics

- Individually adjustable air control elements to meet individual local requirements
- High induction results in a rapid reduction of the temperature difference and airflow velocity
- Diffuser face has been optimised for maximum volume flow rate at low sound power levels
- Internal acoustic lining that reduces room-to-room cross talk through the ductwork
- Diffuser face with spring clip fixing that allows for easy installation of the diffuser face after drywalling is complete

ISO Standards and guidelines

- Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

① Type

VSD35-3-AZ Slot diffuser as supply and extract air combination

② Connection

AK Plenum box
AS With rigid fixing
AS With spring clip fixing

③ Acoustic lining for cross talk reduction (accessory)

ZT No entry: none
ZT With

④ Damper blade for volume flow rate balancing

No entry: none
M With

⑤ Accessories

L No entry: none
L With lip seal

⑥ Nominal size [mm]

600, 750, 900, 1050, 1200

⑦ End pieces

C2 No entry: none
C2 Both ends with factory fitted end angles

⑧ Fixing (accessory)

W00 No entry: none
W00 Fixing brackets for fixing the diffuser to the wall (supplied separately)

⑨ Exposed surface

No entry: anodised, E6-C-0, natural colour
P1 Powder-coated, specify RAL CLASSIC colour

Gloss level

RAL 9010 50 %
 RAL 9006 30 %
 All other RAL colours 70 %

⑩ Colour of air control elements

No entry: similar to RAL 9005, black
WW Similar to RAL 9010, white

Features

Slot diffusers with 35 mm nominal width, used as supply and extract air combination

- ▶ Nominal length from 600 to 1200 mm, 3 slots
- ▶ Volume flow rate range 8 - 40 l/s or 30 - 144 m³/h
- ▶ Diffuser face made of extruded aluminium sections
- ▶ For variable and constant volume flows
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity
- ▶ Individually adjustable air control elements to meet individual local requirements

Optional equipment and accessories

- ▶ Exposed diffuser face available in RAL CLASSIC colours
- ▶ Damper blade for volume flow rate balancing, can be adjusted through the diffuser face
- ▶ Acoustic lining that ensures very good transmission loss
- ▶ Spring clip fixing
- ▶ End angles, fixing brackets

supply and extract air combinations in comfort zones

- ▶ Angled one-way air discharge for turbulent flow (mixed flow ventilation)
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -10 to +10 K
- ▶ For room heights up to 4 m (lower edge of suspended ceiling)
- ▶ For horizontal installation into walls and bulkheads

Attachments

- ▶ Damper blade for volume flow rate balancing
- ▶ End angles

Accessories

- ▶ Lip seal
- ▶ Fixing brackets

Special characteristics

- ▶ Individually adjustable air control elements to meet individual local requirements
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity
- ▶ Diffuser face has been optimised for maximum volume flow rate at low sound power levels
- ▶ Suitable for continuous linear arrangement

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Application

Type VSD35-3-AZ slot diffusers are used as

Variants

- ▶ VSD35-3-AZ-...: supply and extract air combination without acoustic lining (cross talk reduction)
- ▶ VSD35-3-AZ-...-ZT: supply and extract air combination with acoustic lining (cross talk reduction)
- ▶ VSD35-3-AZ-...: Black air control elements
- ▶ VSD35-3-AZ-.../WW: White air control elements

Plenum box and diffuser face fixing

- ▶ **AK:** Plenum box with rigid fixing
- ▶ **AS:** Plenum box with spring clip fixing

 Technical data

Nominal length	600, 750, 900, 1050, 1200 mm	
Number of slots	3	
Minimum volume flow rate, with $\Delta t_Z = -6 \text{ K}$	8 - 15 l/s or 30 - 54 m³/h	
Maximum volume flow rate, with $L_{WA} \approx 50 \text{ dB(A)}$	25 - 40 l/s or 90 - 144 m³/h	
Supply air to room air temperature difference	-10 to +10 K

Features

The new X-GRILLE Cover ventilation grilles, made of high-quality aluminium combine function with an attractive design; they can be installed in walls, sills or rectangular ducts.

► Nominal sizes 225 x 125 - 1225 x 525 mm

- Volume flow rate range 16 - 2554 l/s or 58 - 9194 m³/h
- Energy-efficient and acoustically optimised air discharge
- Symmetric blade profile for two-way entry flow
- Uniform look and easy adjustment due to

concealed blade linkage

► Concealed, optimised screw fixing

► Linear look, ideal for continuous horizontal runs

► Easily exchangeable cover plates allow for a lively two-colour look

► Use of existing rear assemblies

- Easy replacement of existing grilles due to standard installation dimensions

Optional equipment and accessories

- Installation subframe
- Attachments for volume flow rate balancing and air direction control
- Concealed screw fixing
- Spring clip fixing

Application

- Ventilation grille of Type X-GRILLE Cover as supply air or extract air variant for comfort zones and industrial zones
- Attractive design element for building owners and architects with demanding aesthetic requirements
- Two-colour look blends in nicely with the interior of reception or executive rooms
- Directed supply air discharge for mixed flow ventilation
- Blades are adjustable to meet different local

requirements

- For variable and constant volume flows
- For supply air to room air temperature differences from -12 to +4 K
- For installation in walls, sills and rectangular ducts

Variants

- Single grille
- Horizontal run section

Fixing

- Countersunk holes, concealed by cover plate
 - VS: Concealed screw fixing
 - KF: Spring clip fixing
- VS, KF only with installation subframe

Attachments

- AG, AS, D, DG: For volume flow rate balancing and for air direction control

Accessories

- Installation subframe: For the fast and simple installation of ventilation grilles

Special characteristics

- Symmetric blade profile for two-way entry flow
- Concealed blade linkage for adjusting the blades simultaneously
- Countersunk screw holes, covered by cover plates, allow for screw fixing
- Easily exchangeable cover plates allow for a lively two-colour look
- Linear look, ideal for continuous horizontal runs

Standards and guidelines

- Sound power level of the air-regenerated noise measured according to EN ISO 5135

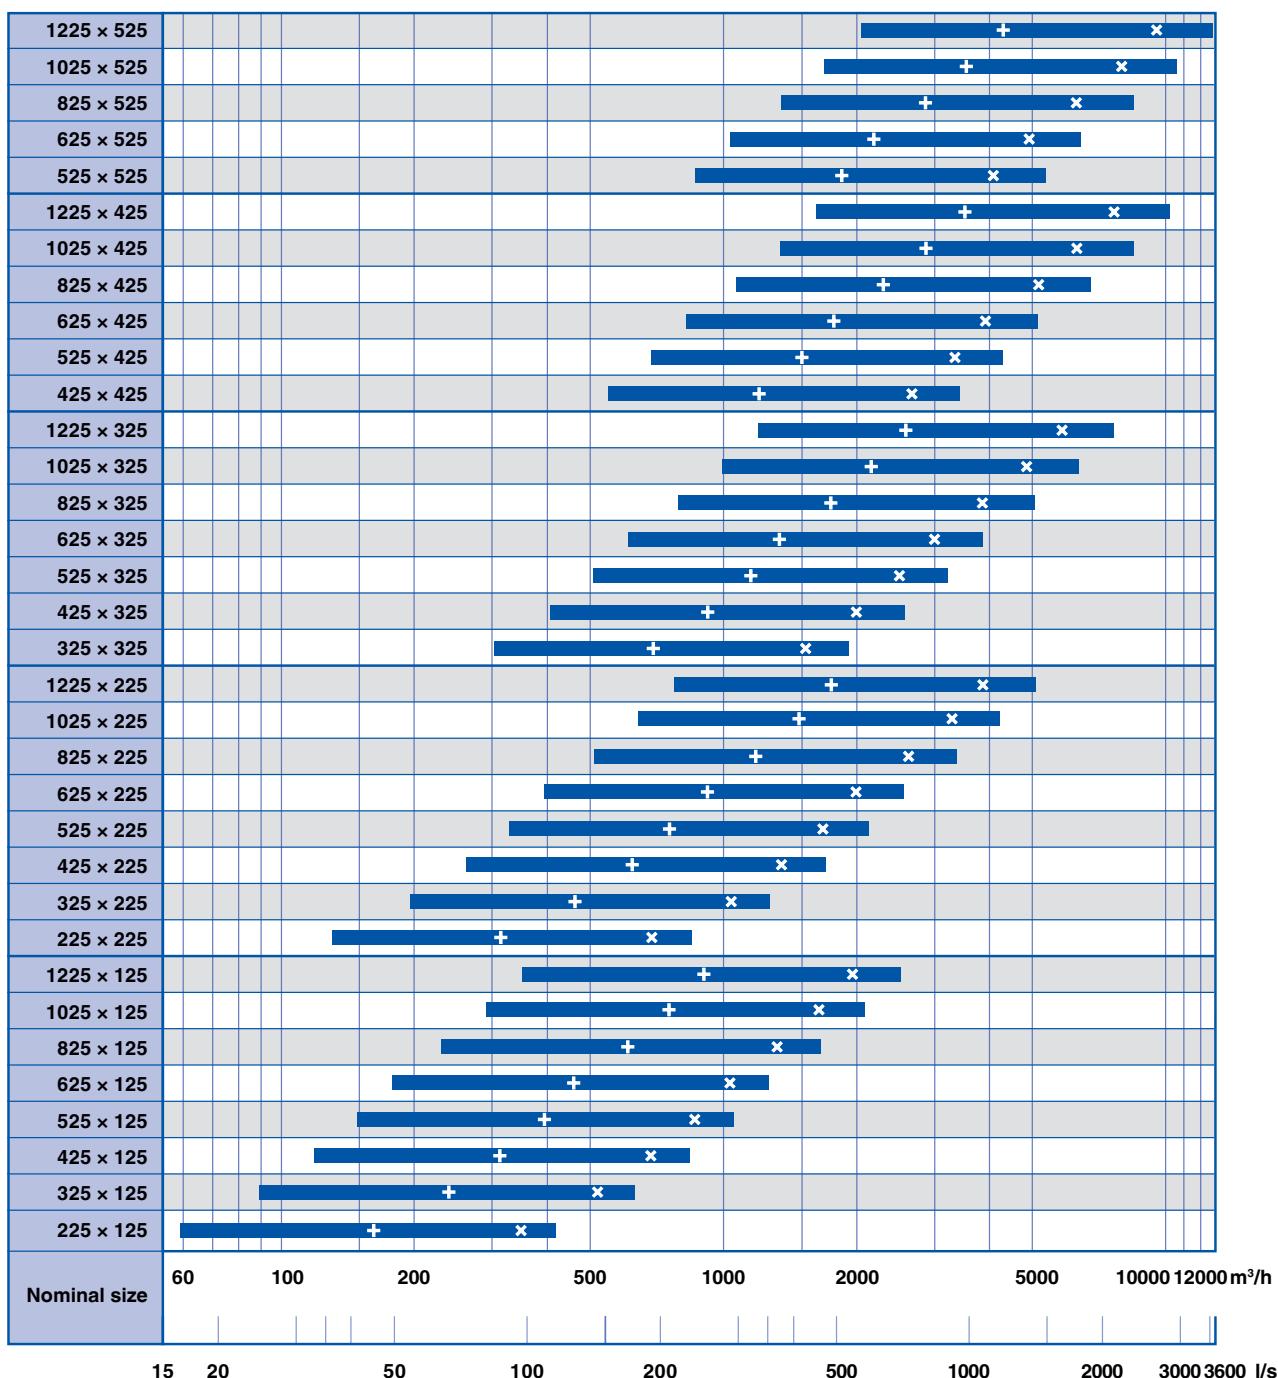

Technical data

Nominal sizes	225 x 125 to 1225 x 525 mm
Horizontal run section	H: 125, 225, 325 mm
Minimum volume flow rate	16 - 568 l/s or 58 - 2045 m ³ /h

Features

The new X-GRILLE Basic ventilation grilles with their gently sloped border combine function with an attractive design; they can be installed in walls, sills or rectangular ducts.

Nominal sizes 225 x 125 - 1225 x 525 mm

Volume flow rate range 19 - 2651 l/s or

68 - 9544 m³/h

- Energy-efficient and acoustically optimised air discharge
- Symmetric blade profile for two-way entry flow
- Uniform look and easy adjustment due to concealed blade linkage
- Gently sloped border construction, almost completely flush with the installation surface
- Linear look, ideal for continuous horizontal runs
- Use of existing rear assemblies
- Easy replacement of existing grilles due to standard installation dimensions
- Optional equipment and accessories
 - Installation subframe
 - Attachments for volume flow rate balancing and air direction control
 - Concealed screw fixing
 - Spring clip fixing

Application

- ▶ Ventilation grille of Type X-GRILLE Basic as supply air or extract air variant for comfort zones and industrial zones
- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ Directed supply air discharge for mixed flow ventilation
- ▶ Blades are adjustable to meet different local requirements
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -12 to +4 K
- ▶ For installation in walls, sills and rectangular ducts

Variants

- ▶ Single grille
 - ▶ Horizontal run section
- Fixing
- ▶ VS: Concealed screw fixing
 - ▶ KF: Spring clip fixing
- VS, KF only with installation subframe

Special characteristics

- ▶ Symmetric blade profile for two-way entry flow
- ▶ Concealed blade linkage for adjusting the blades simultaneously
- ▶ Gently sloped border construction, almost completely flush with the installation surface
- ▶ Linear look, ideal for continuous horizontal runs

Attachments

- ▶ AG, AS, D, DG: For volume flow rate balancing and for air direction control

Accessories

- ▶ Installation subframe: For the fast and simple installation of ventilation grilles

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

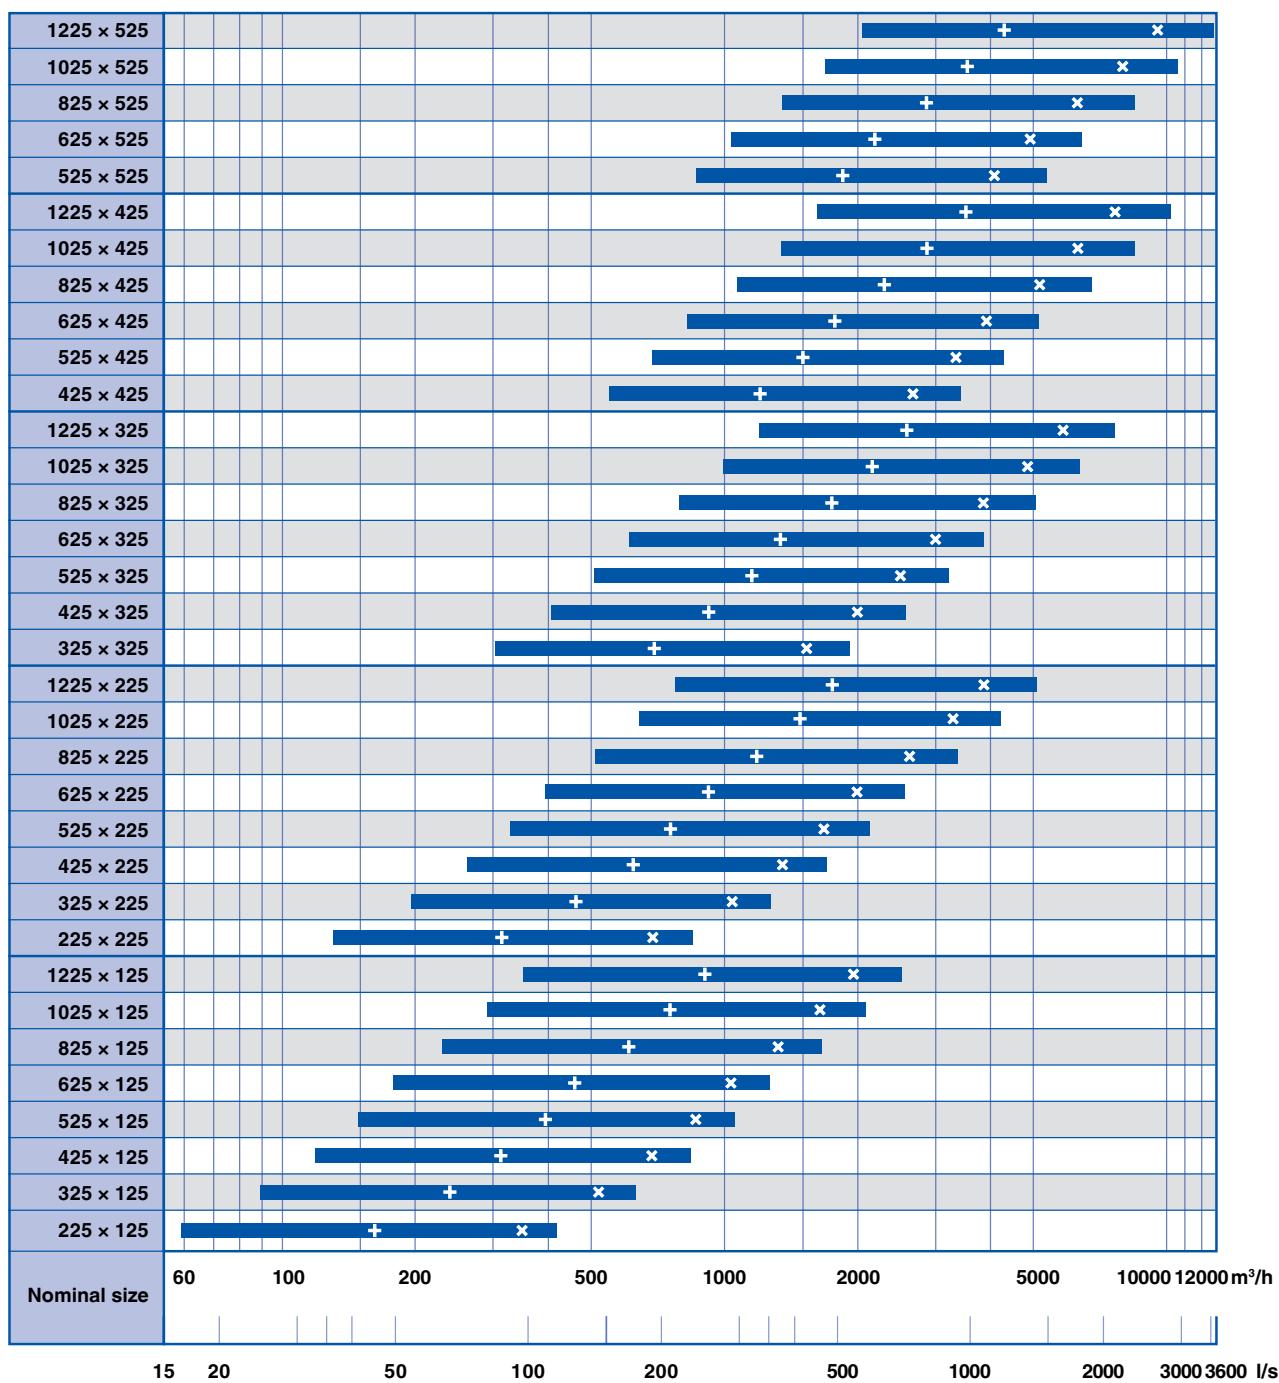

Technical data

Nominal sizes	225 x 125 to 1225 x 525 mm
Horizontal run section	H: 125, 225, 325 mm
Minimum volume flow rate	16 - 568 l/s or 58 - 2045 m ³ /h
Maximum volume flow rate, with L _{WA} max. 40 dB(A) without attachments	97 - 2651 l/s or 350 - 9544 m ³ /h
Supply air to room air temperature difference	-12 to +4 K

Features

- Single ventilation grilles and horizontal run sections with droplet shaped blades
- ▶ Nominal sizes 225 x 125 - 1225 x 525 mm and horizontal run sections
 - ▶ Volume flow rate range 23 - 2000 l/s or 83 - 7200 m³/h
 - ▶ Grille face made of sheet steel, powder-coated
 - ▶ Diffuser-type front border, 28 mm wide longitudinal section, 20 mm wide transverse section
 - ▶ Concealed screw fixing

Optional equipment and accessories

- ▶ Grille face in RAL CLASSIC colours
- ▶ Installation subframe
- ▶ Installation subframe for fitting filter media
- ▶ Attachments for volume flow rate balancing and air direction control

Application

- ▶ Ventilation grille of Type SL as supply air or extract air variant for comfort zones and industrial zones
- ▶ Directed supply air discharge for mixed flow ventilation
- ▶ Blades are adjustable to meet different local requirements
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -12 to +4 K
- ▶ For installation in walls, sills and rectangular ducts

Accessories

- ▶ Installation subframe: For the fast and simple installation of ventilation grilles
- ▶ Filter casing: Frame with filter element and spring clip fixing

Special characteristics

- ▶ Individually adjustable blades
- ▶ Diffuser-type front border
- ▶ Concealed screw fixing

ISO Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Variants

- ▶ SL: Single grille
- ▶ E-SL, M-SL: Horizontal run section

Attachments

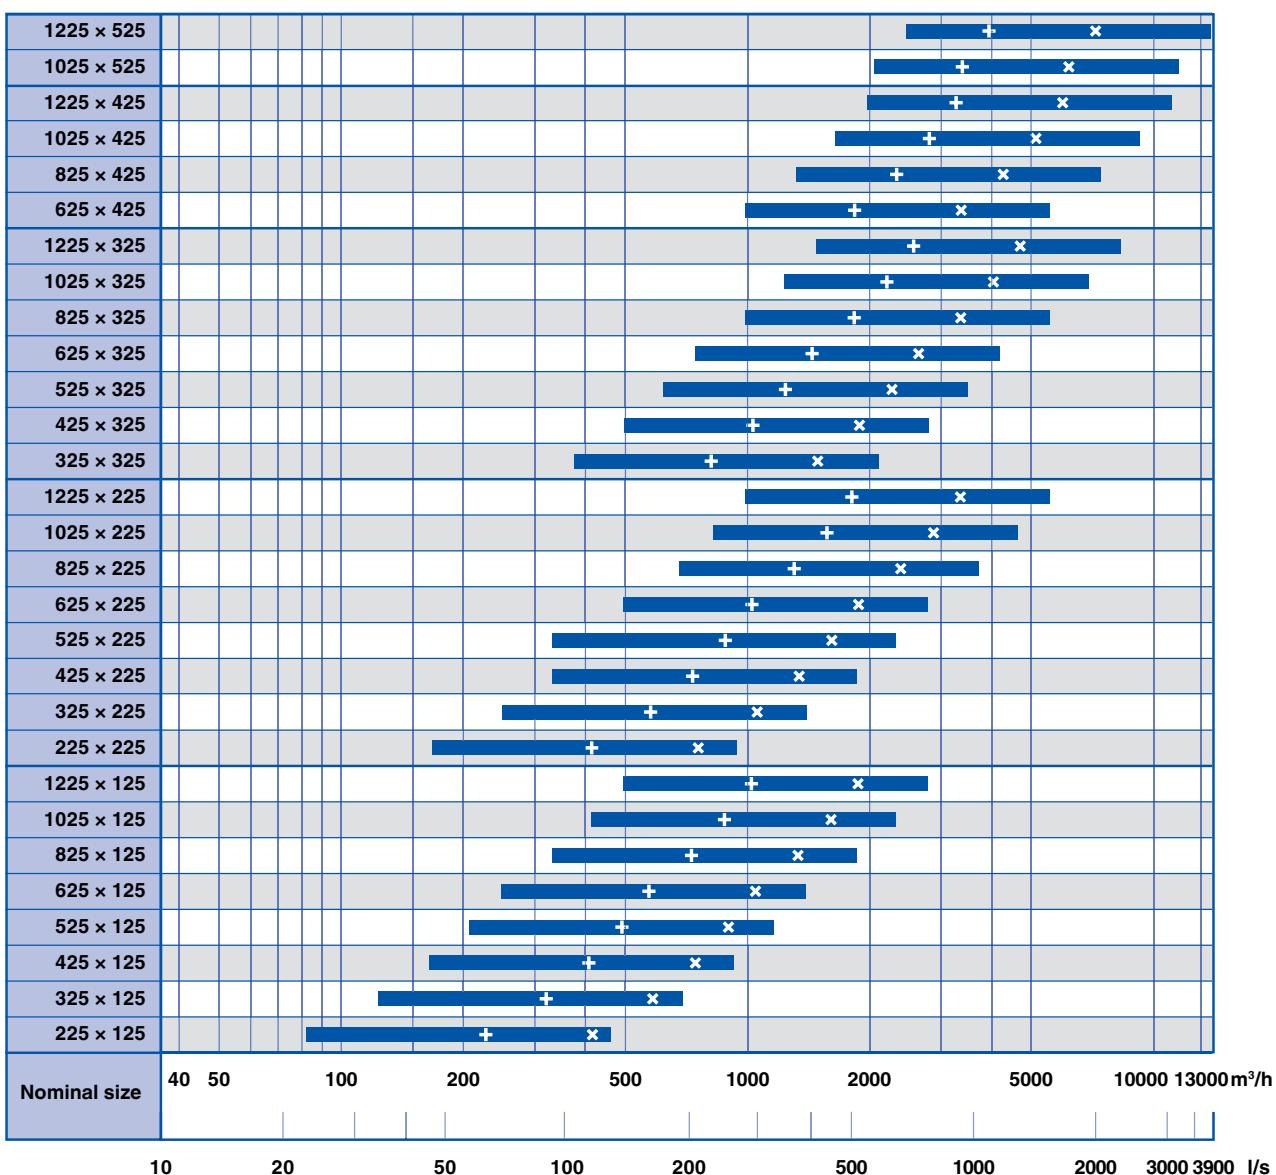

- ▶ AG, AS, D, DG: For volume flow rate balancing and for air direction control

[2] Blade pitch G No entry: 12.5 mm 16.7 mm	[4] Nominal size [mm] L x H	Gloss level RAL 9010 50 % RAL 9006 30 % All other RAL colours 70 %
[3] Blade construction style 0 0° blades (straight)	[5] Exposed surface No entry: anodised, E6-C-0, natural colour	

Features

Grille cores with special profiled blades

- ▶ Nominal sizes 245 x 95 - 1245 x 445 mm
- ▶ Volume flow rate range 10 - 1235 l/s or 36 - 4446 m³/h
- ▶ Grille core made of aluminium with anodised finish
- ▶ Straight (0°) or angled (15°) air discharge

- ▶ Directed supply air discharge for mixed flow ventilation
- ▶ Blades for straight (0°) or angled (15°) air discharge to meet different local requirements
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -12 to +4 K
- ▶ For covering all types of openings

Blade construction style

- ▶ 0: 0° discharge
- ▶ 15: 15° discharge

Special characteristics

- ▶ Fixed blades
- ▶ 0° or 15° air discharge
- ▶ Blade pitch 12.5 mm or 16.7 mm

Application

- ▶ Ventilation grille cores of Type EF as supply air or extract air variant for comfort zones and industrial zones

Variants

- ▶ Blade pitch 12.5 mm
- ▶ G: Blade pitch 16.7 mm

ISO Standards and guidelines

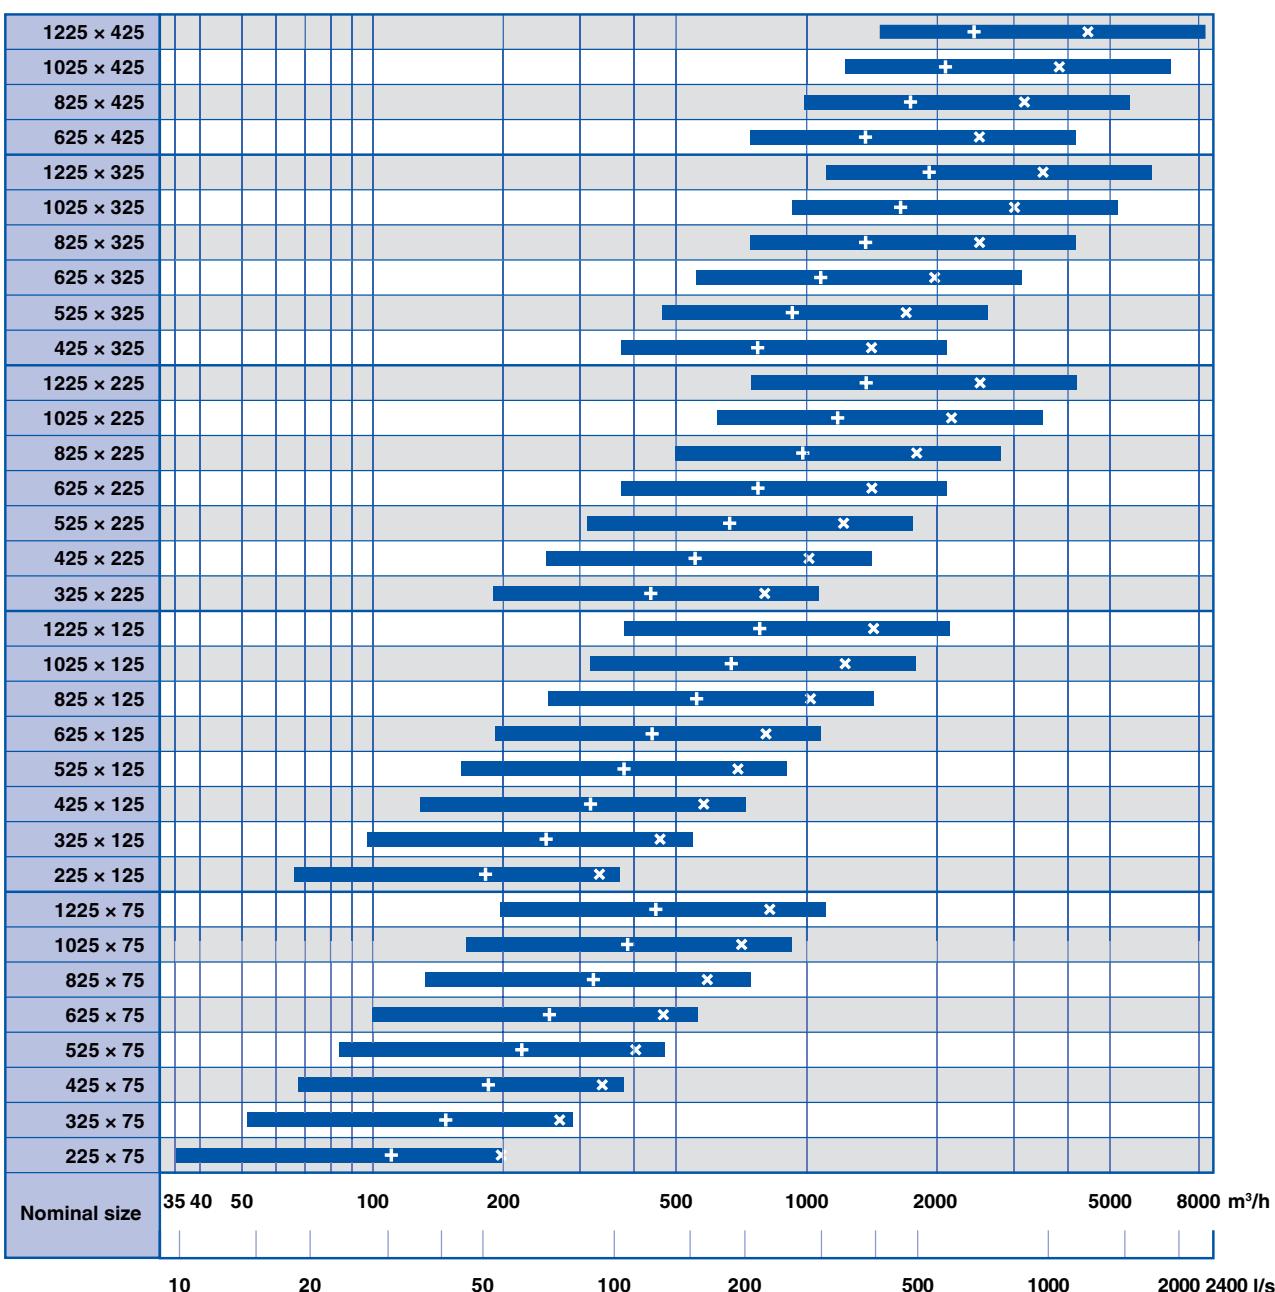

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

Nominal sizes	245 x 95 to 1245 x 445 mm
Minimum volume flow rate	10 - 410 l/s or 36 - 1476 m ³ /h
Maximum volume flow rate, with L _{WA} max. 40 dB(A) without attachments	55 - 1235 l/s or 198 - 4446 m ³ /h
Supply air to room air temperature difference	-12 to +4 K

Volume flow rates apply to supply air

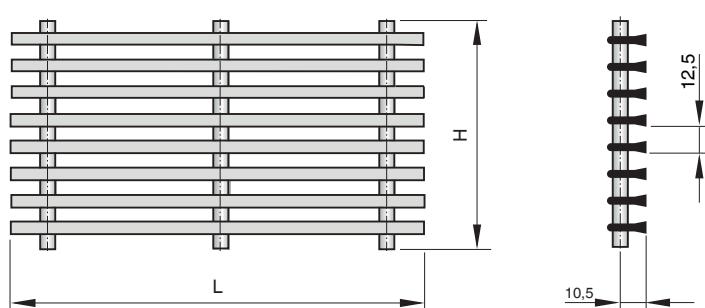

EF, volume flow rate ranges

× LWA = 40 dB(A) with unrestricted airflow + LWA = 40 dB(A) with airflow restricted by 50 %

DISPLACEMENT FLOW DIFFUSERS

4 DISPLACEMENT FLOW DIFFUSERS

4.1 Displacement flow diffusers for installation on a wall

Rectangular casing, one-way air discharge,
for comfort zones

QLE

262

Rectangular casing, one-way or three-way
air discharge, for industrial and comfort
zones

QLF

266

Rectangular casing, one-way air discharge,
for comfort zones

QL-WF

272

Rectangular casing, one-way, two-way or
three-way air discharge, for comfort and
industrial zones

QL-WFM

279

Rectangular casing, one-way air discharge,
for industrial zones

QL-WFT

283

Square casing, two-way or three-way air
discharge, for large rooms and industrial
zones

QL-WQT

286

Semi-circular casing, radial air discharge, for
comfort and industrial zones

QL-WH

289

Quadrant casing, radial air discharge, for
comfort zones

QL-WV

294

Segment-shaped casing, radial air
discharge, for comfort zones

QL-WS

299

Polygon casing, 90° or 180° air discharge,
for comfort and industrial zones

QLV

302

4.2 Displacement flow diffusers for installation into a wall

Supply and extract air combination for installation into walls and bulkheads, one-way air discharge, for comfort zones

QLW-AZ

311

Rectangular casing, one-way air discharge, for comfort and industrial zones

QL-WE

315

4.3 Free-standing displacement flow diffusers

Square casing, four-way air discharge, for large rooms and industrial zones

QL-WQT-RO-4

324

Circular casing, omni directional air discharge, for large rooms and industrial zones

QL-WR

326

Polygon casing, 360° air discharge, for comfort and industrial zones

QLV-360

330

4.4 Displacement flow diffusers for floor installation

Square casing, upward air discharge, for comfort zones

List of abbreviations

L_{WA} [dB(A)]	A-weighted sound power level of air-regenerated noise
\dot{V} [m^3/h] and [l/s]	Volume flow rate
m [kg]	Weight
Δp_t [Pa]	Total differential pressure
l_s [m]	Distance from single grille or horizontal run section (throw distance)
B_1 [mm]	Width of diffuser face
B_4 [mm]	Width of a rectangular spigot
$\emptyset D$ [mm]	Outer diameter of the spigot
$\emptyset D_1$ [mm]	Casing diameter
H_1 [mm]	Height of diffuser face
T_1 [mm]	Casing depth
T_4 [mm]	Depth of a rectangular spigot
v_0 [m/s]	Theoretical airflow velocity across the diffuser area, at a distance of 0 m from the diffuser face
L_{nz} [m]	Near zone of the displacement flow diffuser, where the comfort criteria may not be achieved
Δt_z [K]	Supply air to room air temperature difference, i.e. supply air temperature minus room temperature

Rectangular casing, one-way air discharge, for comfort zones

Features

Compact height, space saving displacement flow diffusers
► Nominal widths 1000 - 1500 mm, nominal heights 150 - 750 mm
► Volume flow rate range 15 - 340 l/s or 54 - 1224 m³/h
► Perforated plate, square pitch
► Rectangular duct connection
► Duct connection at the top or bottom
► Equalising element (perforated sheet metal basket)
► Removable diffuser face

Optional equipment and accessories
► Exposed surface in RAL CLASSIC colours

- Type QUE displacement flow diffusers are used for comfort conditioning applications
- Attractive design element for building owners and architects with demanding aesthetic requirements
- Floor-standing installation on walls, either individually or several units arranged in a row
- Low-velocity airflow, causing only low levels of induction and resulting in low-turbulence displacement ventilation.
- Excellent air quality in the occupied zone
- Draught-free and economical air conditioning also of larger internal spaces with several displacement flow diffusers in a regular arrangement
- For variable and constant volume flows
- For supply air to room air temperature differences from -6 to -1 K

Variants

- QLE-O: Spigot at the top
- QLE-U: Spigot at the bottom

Special characteristics

- One-way air discharge
- Diffuser face hooks onto the casing, hence easy to remove
- Duct connection at the top or bottom

Standards and guidelines

- Sound power level of the air-regenerated noise measured according to EN ISO 5135

Application

Technical data

Nominal sizes (B x H)	1000 x 150 to 1500 x 750 mm
Minimum volume flow rate, at 0.1 m/s	15 - 115 l/s or 54 - 414 m³/h
Maximum volume flow rate, at 0.3 m/s	45 - 340 l/s or 162 - 1224 m³/h
Supply air to room air temperature difference	-6 to -1 K
Sound power level, at 0.3 m/s	42 dB(A) max.

--	---------------------------------------	---

P1	RAL 9010, pure white Powder-coated, specify RAL CLASSIC colour
	Gloss level RAL 9010 50 % RAL 9006 30 % All other RAL colours 70 %

Features

Slender, space saving displacement flow diffusers in an unusual design with chamfered front edges

- ▶ Nominal widths 300 - 1250 mm, nominal heights 450 - 2000 mm
- ▶ Volume flow rate range 15 - 865 l/s or 54 - 3114 m³/h
- ▶ Perforated plate, square pitch
- ▶ Rectangular duct connection
- ▶ Duct connection at the top or bottom
- ▶ Equalising element (perforated sheet metal basket)

Optional equipment and accessories

- ▶ Exposed surface in RAL CLASSIC colours
- ▶ Fixing material

Application

- ▶ Type QLF displacement flow diffusers are used as supply air units for industrial and comfort zones
- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ Floor-standing installation on walls, either individually or several units arranged in a row
- ▶ Low-velocity airflow, causing only low levels of induction and resulting in low-turbulence displacement ventilation.
- ▶ Excellent air quality in the occupied zone
- ▶ Draught-free and economical ventilation and air conditioning also of larger internal spaces such as shop floors or auditoriums, with several displacement flow diffusers in a regular arrangement
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -6 to -1 K

Variants

- ▶ QLE-F: Spigot at the top
- ▶ QLF-U: Spigot at the bottom
- ▶ QLF-*1: One-way air discharge
- ▶ QLF-*3: Three-way air discharge

Useful additions

- ▶ Fixing brackets and screws

Special characteristics

- ▶ One-way or three-way air discharge
- ▶ Duct connection at the top or bottom

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

Nominal sizes (B x H)	300 x 450 to 1250 x 2000 mm

Features

Displacement flow diffusers in many nominal sizes

- ▶ Nominal widths 600 - 1200 mm, nominal heights 300 - 2000 mm
- ▶ Volume flow rate range 13 - 895 l/s or 47 - 3222 m³/h
- ▶ Perforated plate, square pitch; patterned as an option
- ▶ Rectangular or circular duct connection
- ▶ Duct connection at the top or bottom
- ▶ Equalising sheet metal plate with nozzles, each with a deflector scoop

Optional equipment and accessories

- ▶ Exposed surface in RAL CLASSIC or NCS colours
- ▶ Plinth in heights 50, 60, 70, 100, 150, 200 mm
- ▶ Volume flow rate measuring unit for circular duct connections
- ▶ All surfaces powder-coated for free-standing installation

Application

- ▶ Type QL-WF displacement flow diffusers are used as supply air units for comfort zones
- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ Floor-standing installation on walls, either individually or several units arranged in a row
- ▶ Low-velocity airflow, causing only low levels of induction and resulting in low-turbulence displacement ventilation.
- ▶ Excellent air quality in the occupied zone
- ▶ Draught-free and economical ventilation and air conditioning also of larger internal spaces such as shop floors or auditoriums, with several displacement flow diffusers in a regular arrangement
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -6 to -1 K

Variants

- ▶ QL-WF-E*: Rectangular spigot
- ▶ QL-WF-R*: Circular spigot
- ▶ QL-WF-*O: Spigot at the top
- ▶ QL-WF-*U: Spigot at the bottom
- ▶ QL-WF-...-K: Patterned perforated plate

Attachments

- ▶ **M:** Volume flow rate measuring unit, only for QL-WF-R* with square pitch perforated plate
- ▶ **S:** Plinth

Special characteristics

- ▶ One-way air discharge
- ▶ Perforated plate, square pitch or patterned
- ▶ Rectangular or circular duct connection
- ▶ Duct connection at the top or bottom
- ▶ Equalising sheet metal plate with nozzles

ISO Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Features

Displacement flow diffusers with a rectangular spigot

- ▶ Nominal widths 600 mm and 1200 mm; nominal height 2000 mm
- ▶ Volume flow rate range 112 - 1443 l/s or 405 - 5196 m³/h
- ▶ Perforated plate, square pitch; patterned as an option
- ▶ Rectangular duct connection
- ▶ Duct connection at the top or bottom
- ▶ Equalising sheet metal plate with nozzles, each with a deflector scoop

Optional equipment and accessories

- ▶ Exposed surface in RAL CLASSIC or NCS colours

- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements

- ▶ Floor-standing installation on walls or in corners, either individually or several units arranged in a row

- ▶ Low-velocity airflow, causing only low levels of induction and resulting in low-turbulence displacement ventilation.

- ▶ Excellent air quality in the occupied zone

- ▶ Draught-free and economical ventilation and air conditioning also of larger internal spaces such as shop floors or auditoriums, with several displacement flow diffusers in a regular arrangement

- ▶ For variable and constant volume flows

- ▶ For supply air to room air temperature differences from -6 to -1 K

- ▶ QL-WFM-...-K: Patterned perforated plate

Attachments

- ▶ S: Plinth

Special characteristics

- ▶ One-way, two-way or three-way air discharge
- ▶ Perforated plate, square pitch or patterned
- ▶ Rectangular duct connection
- ▶ Duct connection at the top or bottom
- ▶ Equalising sheet metal plate with nozzles

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Application

- ▶ Type QL-WFM displacement flow diffusers are used as supply air units for industrial and comfort zones

Variants

- ▶ QL-WFM-E*: Rectangular spigot
- ▶ QL-WFM-*O: Spigot at the top
- ▶ QL-WFM-*U: Spigot at the bottom

Technical data

Nominal sizes	Perforated plate, square pitch 600 x 2000, 1200 x 2000 mm Patterned 628 x 1994, 1222 x 1994 mm
Minimum volume flow rate, at 0.1 m/s	112 - 361 l/s or 405 - 1299 m ³ /h
Maximum volume flow rate, at 0.4 m/s	449 - 1443 l/s or 1618 - 5196 m ³ /h
Supply air to room air temperature difference	-6 to -1 K
Sound power level, at 0.3/0.4 m/s	65/77 dB(A) max.

Features

Displacement flow diffusers for large volume flow rates

- ▶ Nominal widths 600 mm and 1200 mm, nominal heights 1200 and 2000 mm
- ▶ Volume flow rate range 65 - 908 l/s or 235 - 3269 m³/h
- ▶ Diffuser face is box profile sheet metal
- ▶ Rectangular or circular duct connection
- ▶ Duct connection at the top or bottom
- ▶ Equalising sheet metal plate with nozzles, each with a deflector scoop

Optional equipment and accessories

- ▶ Exposed surface in RAL CLASSIC or NCS colours
- ▶ Volume flow rate measuring unit for circular duct connections

are used as supply air units for industrial zones

- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ Floor-standing installation on walls, either individually or several units arranged in a row
- ▶ Low-velocity airflow, causing only low levels of induction and resulting in low-turbulence displacement ventilation.
- ▶ Excellent air quality in the occupied zone
- ▶ Draught-free and economical ventilation and air conditioning also of larger internal spaces such as shop floors or auditoriums, with several displacement flow diffusers in a regular arrangement
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -6 to -1 K

- ▶ QL-WFT-R*: Circular spigot
- ▶ QL-WFT-E: Rectangular spigot
- ▶ QL-WFT-U: Spigot at the bottom
- ▶ QL-WFT-O: Spigot at the top

Attachments

- ▶ M: Volume flow rate measuring unit, only for QL-WFT-RO

Special characteristics

- ▶ One-way air discharge
- ▶ Box profile diffuser face
- ▶ Rectangular or circular duct connection
- ▶ Duct connection at the top
- ▶ Equalising sheet metal plate with nozzles

ISO Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Application

- ▶ Type QL-WFT displacement flow diffusers

Variants

Features

Square displacement flow diffusers for large volume flow rates

- Nominal widths 800 mm and 1200 mm; nominal height 2000 mm
- Volume flow rate range 301 - 2724 l/s or 1084 - 9808 m³/h
- Diffuser face is box profile sheet metal
- Circular duct connection
- Duct connection at the top or bottom
- Equalising sheet metal plate with nozzles, each with a deflector scoop

Optional equipment and accessories

- Exposed surface in RAL CLASSIC or NCS colours
- Volume flow rate measuring unit
- All surfaces powder-coated for free-standing installation

Application

- Type QL-WQT displacement flow diffusers are used as supply air units for large internal spaces and industrial zones
- Attractive design element for building owners and architects with demanding aesthetic requirements
- Floor-standing installation on walls or in corners, either individually or several units arranged in a row
- Low-velocity airflow, causing only low levels of induction and resulting in low-turbulence displacement ventilation.
- Excellent air quality in the occupied zone
- Draught-free and economical ventilation and air conditioning also of larger internal spaces such as shop floors or auditoriums, with several displacement flow diffusers in a regular arrangement
- For variable and constant volume flows
- For supply air to room air temperature differences from -6 to -1 K

Features

Displacement flow diffusers for installation in corners

- ▶ Nominal widths 190 - 450 mm, nominal heights 600 - 1500 mm
- ▶ Volume flow rate range 14 - 412 l/s or 49 - 1484 m³/h
- ▶ Perforated plate, square pitch; patterned as an option
- ▶ Circular duct connection
- ▶ Duct connection at the top or bottom
- ▶ Equalising sheet metal plate with nozzles, each with a deflector scoop

Optional equipment and accessories

- ▶ Exposed surface in RAL CLASSIC or NCS colours
- ▶ Plinth in heights 50, 60, 70, 100, 150, 200 mm
- ▶ Duct cover
- ▶ Volume flow rate measuring unit

Application

- ▶ Type QL-WV displacement flow diffusers are used as supply air units for comfort zones
- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ Floor-standing installation in corners
- ▶ Low-velocity airflow, causing only low levels of induction and resulting in low-turbulence displacement ventilation.
- ▶ Excellent air quality in the occupied zone
- ▶ Draught-free and economical ventilation and air conditioning also of larger internal spaces such as shop floors or auditoriums, with several displacement flow diffusers in a regular arrangement
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -6 to -1 K

Attachments

- ▶ M: Volume flow rate measuring unit
- ▶ S: Plinth
- ▶ K: Duct cover

Special characteristics

- ▶ Radial air discharge
- ▶ Perforated plate, square pitch or patterned
- ▶ Circular duct connection
- ▶ Duct connection at the top or bottom
- ▶ Equalising sheet metal plate with nozzles
- ▶ Optional duct cover

ISO Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Variants

- ▶ QL-WV-R*: Circular spigot
- ▶ QL-WV-*O: Spigot at the top
- ▶ QL-WV-*U: Spigot at the bottom
- ▶ QL-WV-...-K: Patterned perforated plate

Polygon casing, 90° or 180° air discharge, for comfort and industrial zones

Order code

QLV – 180 – O – M – L / 250 x 600 / W0 / P1 – RAL ...

1 2 3 4 5 6 7 8

[1] Type
QLV Displacement flow diffuser
[2] Air discharge
90 Three-way
180 Five-way

[3] Connection
Circular spigot
O Top
U Bottom

[4] Damper blade for volume flow rate balancing
No entry: none

M With
[5] Lip seal
No entry: none
L With (only for top spigot)
Bottom spigots always have a lip seal

[6] Nominal size [mm]
ØD x H
Spigot diameter x nominal height

[7] Fixing
No entry: none
W0 With material for wall fixing

[8] Exposed surface
No entry: powder-coated
RAL 9010, pure white
P1 Powder-coated, specify RAL CLASSIC colour
S7 Uncoated (galvanised steel, untreated aluminium)

Gloss level
RAL 9010 50 %
RAL 9006 30 %
All other RAL colours 70 %

Features

Polygon displacement flow diffusers
► Spigot diameter 160 - 630 mm, nominal height 500 - 1750 mm
► Volume flow rate range 17 - 915 l/s or 62 - 3295 m³/h
► Perforated plate, square pitch
► Circular duct connection
► Duct connection at the top or bottom
► Integral airflow straightener and conical equalising element

Optional equipment and accessories

- Wall mount
- Damper blade for volume flow rate balancing
- Exposed surface in RAL CLASSIC colours

- Attractive design element for building owners and architects with demanding aesthetic requirements
- Floor-standing installation on walls or in corners
- Low-velocity airflow, causing only low levels of induction and resulting in low-turbulence displacement ventilation.
- Excellent air quality in the occupied zone
- Draught-free and economical ventilation and air conditioning also of larger internal spaces such as shop floors or auditoriums, with several displacement flow diffusers in a regular arrangement
- For variable and constant volume flows
- For supply air to room air temperature differences from -6 to -1 K

Attachments

- Damper blade for volume flow rate balancing

Accessories

- Lip seal
- Wall mount

Special characteristics

- Three-way or five-way air discharge
- Duct connection at the top or bottom
- Optional damper blade for volume flow rate balancing

ISO Standards and guidelines

- Sound power level of the air-regenerated noise measured according to EN ISO 5135

Application

- Type QLV displacement flow diffusers are used as supply air units for industrial and comfort zones

Technical data

Nominal sizes	160 x 500 to 630 x 1750 mm
Minimum volume flow rate, at 0.1 m/s	17 - 305 l/s or 62 - 1098 m ³ /h
Maximum volume flow rate, at 0.3 m/s	52 - 915 l/s or 185 - 3295 m ³ /h
Supply air to room air temperature difference	-6 to -1 K
Sound power level, at 0.3 m/s	43 dB(A) max.

Features

Displacement flow diffusers with supply and extract air functions combined in one casing

- ▶ Nominal lengths 600 - 1200 mm
- ▶ Volume flow rate range 12 - 45 l/s or 43 - 162 m³/h
- ▶ Variant with cross-talk attenuator ensures very good transmission loss
- ▶ Perforated plate, square pitch
- ▶ Circular duct connections
- ▶ Horizontal duct connection

Optional equipment and accessories

- ▶ Exposed surface in RAL CLASSIC colours
- ▶ Damper blade for volume flow rate balancing
- ▶ Cross-talk attenuator
- ▶ Fixing brackets

use in comfort zones

- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ For installation into walls or bulkheads, either individually or several diffusers arranged in a row
- ▶ Low-velocity airflow, causing only low levels of induction and resulting in low-turbulence displacement ventilation.
- ▶ Excellent air quality in the occupied zone
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -6 to -1 K

balancing

Accessories

- ▶ Lip seal
- ▶ Wall fixing bracket

Useful additions

- ▶ Retrofit cross-talk attenuator

Special characteristics

- ▶ One-way air discharge
- ▶ Diffuser face screw-fixed to casing, hence easy to remove
- ▶ Horizontal duct connection

ISO

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Application

- ▶ Type QLW-AZ displacement flow diffusers are supply and extract air combinations for

Technical data

Nominal sizes	600, 750, 900, 1050, 1200 mm
Minimum volume flow rate, at approx. 0.2 m/s	12 - 25 l/s or 43 - 90 m ³ /h
Maximum volume flow rate, at approx. 0.4 m/s	25 - 45 l/s or 90 - 162 m ³ /h
Supply air to room air temperature difference	-6 to -1 K

Features

Displacement flow diffusers in many nominal sizes

- ▶ Nominal widths 600 - 1200 mm, nominal heights 300 - 2000 mm
- ▶ Volume flow rate range 13 - 895 l/s or 47 - 3222 m³/h
- ▶ Perforated plate, square pitch; patterned as an option
- ▶ Rectangular or circular duct connection
- ▶ Duct connection at the top or bottom
- ▶ Equalising sheet metal plate with nozzles, each with a deflector scoop

Optional equipment and accessories

- ▶ Volume flow rate measuring unit for circular duct connections
- ▶ Exposed surface in RAL CLASSIC or NCS colours

are used as supply air units for industrial and comfort zones

- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ For installation into walls, either individually or several diffusers arranged in a row
- ▶ Low-velocity airflow, causing only low levels of induction and resulting in low-turbulence displacement ventilation.
- ▶ Excellent air quality in the occupied zone
- ▶ Draught-free and economical ventilation and air conditioning also of larger internal spaces such as shop floors or auditoriums, with several displacement flow diffusers in a regular arrangement
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -6 to -1 K

- ▶ QL-WE-*O: Spigot at the top
- ▶ QL-WE-*U: Spigot at the bottom
- ▶ QL-WE-O: Without rear assembly
- ▶ QL-WE-...-K: Patterned perforated plate

Attachments

- ▶ M: Volume flow rate measuring unit, only for QL-WE-R* with square pitch perforated plate

Special characteristics

- ▶ One-way air discharge
- ▶ Perforated plate, square pitch or patterned
- ▶ Rectangular or circular duct connection
- ▶ Duct connection at the top or bottom
- ▶ Equalising sheet metal plate with nozzles

ISO Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Application

Type QL-WE displacement flow diffusers

Technical data

Nominal sizes	Perforated plate, square pitch 600 x 300 - 1200 x 2000 mm Patterned 580 x 316 - 1240 x 1996 mm
Minimum volume flow rate, at 0.1 m/s	13 - 225 l/s or 47 - 810 m ³ /h
Maximum volume flow rate, at 0.4 m/s	51 - 895 l/s or 184 - 3222 m ³ /h
Supply air to room air temperature difference	-6 to -1 K
Sound power level, at 0.3/0.4 m/s	45/54 dB(A) max.

Features

Square displacement flow diffusers for large volume flow rates

- ▶ Nominal widths 800 mm and 1200 mm; nominal height 2000 mm
- ▶ Volume flow rate range 602 - 3632 l/s or 2168 - 13077 m³/h
- ▶ Diffuser face is box profile sheet metal
- ▶ Circular duct connection
- ▶ Duct connection at the top or bottom
- ▶ Equalising sheet metal plate with nozzles, each with a deflector scoop

Optional equipment and accessories

- ▶ Exposed surface in RAL CLASSIC or NCS colours
- ▶ Volume flow rate measuring unit

Application

- ▶ Type QL-WQT-*4 displacement flow diffusers are used as supply air units for large internal spaces and industrial zones
- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ For free-standing installation
- ▶ Low-velocity airflow, causing only low levels of induction and resulting in low-turbulence displacement ventilation.
- ▶ Excellent air quality in the occupied zone
- ▶ Draught-free and economical ventilation and air conditioning also of larger internal spaces such as shop floors or auditoriums, with several displacement flow diffusers in a regular arrangement
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -6 to -1 K

Variants

- ▶ QL-WQT-R*-4: Circular spigot
- ▶ QL-WQT-RU-4: Spigot at the bottom
- ▶ QL-WQT-RO-4: Spigot at the top

Attachments

- ▶ M: Volume flow rate measuring unit

Special characteristics

- ▶ Four-way air discharge
- ▶ Box profile diffuser face
- ▶ Circular duct connection
- ▶ Duct connection at the top
- ▶ Equalising sheet metal plate with nozzles

ISO Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

Nominal sizes	800 x 2000, 1200 x 2000 mm
Minimum volume flow rate, at 0.1 m/s	602, 908 l/s or 2168, 3269 m ³ /h
Maximum volume flow rate, at 0.4 m/s	2409, 3632 l/s or 8674, 13077 m ³ /h
Supply air to room air temperature difference	-6 to -1 K
Sound power level, at 0.3/0.4 m/s	50/61 dB(A) max.

Features

Polygon displacement flow diffusers with omnidirectional air discharge

- Spigot diameter 160 - 630 mm, nominal height 500 - 1750 mm
- Volume flow rate range 32 - 1157 l/s or 116 - 4166 m³/h
- Circular duct connection
- Duct connection at the top or bottom
- Integral airflow straightener and conical equalising element

Optional equipment and accessories

- Floor mounting plate
- Damper blade for volume flow rate balancing
- Exposed surface in RAL CLASSIC colours

and comfort zones

- Attractive design element for building owners and architects with demanding aesthetic requirements
- For free-standing installation
- Low-velocity airflow, causing only low levels of induction and resulting in low-turbulence displacement ventilation.
- Excellent air quality in the occupied zone
- Draught-free and economical ventilation and air conditioning also of larger internal spaces such as shop floors or auditoriums, with several displacement flow diffusers in a regular arrangement
- For variable and constant volume flows
- For supply air to room air temperature differences from -6 to -1 K

Application

- Type QLV-360 displacement flow diffusers are used as supply air units for industrial

Technical data

Nominal sizes	160 x 500 to 630 x 1750 mm
Minimum volume flow rate, at 0.1 m/s	32 - 386 l/s or 116 - 1389 m ³ /h
Maximum volume flow rate, at 0.3 m/s	97 - 1157 l/s or 348 - 4166 m ³ /h
Supply air to room air temperature difference	-6 to -1 K
Sound power level, at 0.3 m/s	50 dB(A) max.

Variants

- QLV-...-O: Spigot at the top
- QLV-...-U: Spigot at the bottom

Special characteristics

- Eight-way air discharge
- Duct connection at the top or bottom
- Optional damper blade for volume flow rate balancing

Standards and guidelines

- Sound power level of the air-regenerated noise measured according to EN ISO 5135

Features

Displacement flow diffusers with a circular spigot

- ▶ Nominal size 600x600 mm
- ▶ Volume flow rate range 31 - 125 l/s or 113 - 452 m³/h
- ▶ Robust base plate, perforated
- ▶ Circular duct connection
- ▶ Horizontal duct connection
- ▶ Perforated sheet metal cylinder as equalising element

Optional equipment and accessories

- ▶ Displacement flow diffuser without plenum box for use in positive pressure plenums
- ▶ Exposed surface in RAL CLASSIC or NCS colours

Application

- ▶ Type QL-BE displacement flow diffusers are used as supply air units for comfort zones
- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ For installation into false floors
- ▶ Low-velocity airflow, causing only low levels of induction and resulting in low-turbulence displacement ventilation.
- ▶ Excellent air quality in the occupied zone
- ▶ Draught-free and economical air conditioning also of larger internal spaces with several displacement flow diffusers in a regular arrangement
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -6 to -1 K

Variants

- ▶ QL-BE-RO: Displacement flow diffuser with plenum box and circular spigot
- ▶ QL-BE: Displacement flow diffuser without plenum box

Special characteristics

- ▶ Vertical air discharge
- ▶ Robust base plate, perforated
- ▶ Circular duct connection
- ▶ Horizontal duct connection
- ▶ Perforated sheet metal cylinder as equalising element

ISO

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

Nominal sizes	600 x 600 mm
Minimum volume flow rate, at 0.1 m/s	31 l/s or 113 m ³ /h
Maximum volume flow rate, at 0.4 m/s	125 l/s or 452 m ³ /h
Supply air to room air temperature difference	-6 to -1 K
Sound power level, at 0.3/0.4 m/s	30/39 dB(A) max.

List of abbreviations

L _{WA} [dB(A)]	A-weighted sound power level of air-regenerated noise
̇V [m ³ /h] and [l/s]	Volume flow rate
Δt _z [K]	Supply air to room air temperature difference, i.e. supply air temperature minus room temperature
Δp _t [Pa]	Total differential pressure
A _{eff} [m ²]	Effective air discharge area
ØD [mm]	Outer diameter of the spigot
ØD ₁ [mm]	Outer diameter of a circular diffuser face
ØD ₂ [mm]	Diameter of a circular diffuser face style
ØD ₃ [mm]	Diameter of a circular plenum box
Q ₁ [mm]	Outer diameter of a square diffuser face
Q ₂ [mm]	Dimensions of a square diffuser face style
Q ₃ [mm]	Dimensions of a square plenum box
H ₁ [mm]	Distance (height) from the lower edge of the suspended ceiling to the lower edge of the diffuser face
H ₂ [mm]	Height of a ceiling diffuser, from the lower edge of the suspended ceiling to the upper edge of the spigot
H ₃ [mm]	Height of a ceiling diffuser with plenum box, from the lower edge of the suspended ceiling to the upper edge of the plenum box or of the spigot
A [mm]	Position of the spigot, defined by the distance of the spigot centre line to the lower edge of the suspended ceiling
C [mm]	Length of the spigot
m [kg]	Weight

All sound power levels are based on 1 pW.

B Bowden cable for manual adjustment E4 230 V AC, 3-point E5 24 V AC/DC, 3-point E6 24 V AC/DC, modulating 0 - 10 V DC T Thermal actuator		

Features

Displacement flow diffusers with bell-shaped, low turbulence air discharge in cooling mode

- ▶ Nominal sizes 250, 355, 450, 560 mm
- ▶ Volume flow rate range 205 - 1570 l/s or 738 - 5652 m³/h
- ▶ Casing made of galvanised sheet steel
- ▶ For variable and constant volume flows
- ▶ Installation either free hanging or on walls or pillars
- ▶ Low-turbulence displacement ventilation
- ▶ Discharge direction can be adjusted manually or with an actuator
- ▶ Chain pull for adjusting the discharge direction manually

Optional equipment and accessories

- ▶ Exposed diffuser parts in RAL CLASSIC colours
- ▶ Electric and thermal actuators for adjusting the air discharge direction
- ▶ Bowden cable for adjusting the discharge direction manually
- ▶ Wall mount

Technical data

Nominal sizes	250, 355, 450, 560 mm
Minimum volume flow rate	205 - 785 l/s or 738 - 2826 m ³ /h
Maximum volume flow rate, with L _{WA} ≈ 55 dB(A)	410 - 1570 l/s or 1476 - 5652 m ³ /h
Supply air to room air temperature difference	-8 to +12 K

Application

- ▶ Type QSH displacement flow diffusers are used primarily for industrial zones with air polluting work processes
- ▶ Bell-shaped air discharge in cooling mode, vertical air discharge in heating mode
- ▶ Low-turbulence displacement of polluted or contaminated air in the occupied zone
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -8 to +12 K
- ▶ Installation at heights between 3.5 m and 10 m, either free hanging or on walls or pillars
- ▶ Installation preferably outside of occupied zones, e.g. in corridors
- ▶ Ideal for use with TDC temperature difference control module

Attachments

- ▶ Chain pull for manual adjustment, approx. 2.0 m

- ▶ B: Bowden cable for manual adjustment, approx. 2.8 m
- ▶ E*: Electric actuator
- ▶ T: Thermal actuator

Accessories

- ▶ W00: Wall mount
- ▶ K00: Chain fixing
- ▶ WK0: Wall mount and chain fixing

Special characteristics

- ▶ Bell-shaped, low-turbulence air discharge in cooling mode
- ▶ Air discharge direction is adjusted manually or with an electric or thermal actuator

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

QSH supply air, horizontal air discharge, sound power level and total differential pressure

RAL 9006 30 %
All other RAL colours 70 %

Features

Impulse diffusers with horizontal air discharge in cooling mode

- ▶ Nominal sizes 250, 355, 450, 560 mm
- ▶ Volume flow rate range 205 - 1585 l/s or 738 - 5706 m³/h
- ▶ Casing made of galvanised sheet steel
- ▶ For variable and constant volume flows
- ▶ Installation either free hanging or on walls or pillars
- ▶ Large throw distance due to high discharge momentum
- ▶ Discharge direction can be adjusted manually or with an actuator
- ▶ Chain pull for adjusting the discharge direction manually

Optional equipment and accessories

- ▶ Exposed diffuser parts in RAL CLASSIC colours
- ▶ Electric and thermal actuators for adjusting the air discharge direction
- ▶ Bowden cable for adjusting the discharge direction manually
- ▶ Wall mount

Application

- ▶ Type ISH impulse diffusers are used primarily for industrial zones without air polluting work processes
- ▶ Horizontal air discharge in cooling mode, vertical air discharge in heating mode
- ▶ Ventilation of large occupied zones due to high discharge momentum
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -8 to +12 K
- ▶ Installation at heights between 3.5 m and 10 m, either free hanging or on walls or pillars
- ▶ Installation preferably above occupied zones
- ▶ Ideal for use with TDC temperature difference control module

- ▶ E*: Electric actuator
- ▶ T: Thermal actuator

Accessories

- ▶ W00: Wall mount
- ▶ K00: Chain fixing
- ▶ WK0: Wall mount and chain fixing

Special characteristics

- ▶ Large throw distance due to high discharge momentum
- ▶ Horizontal or vertical air discharge
- ▶ Free hanging installation above the occupied zone
- ▶ Air discharge direction is adjusted manually or with an electric or thermal actuator

Attachments

- ▶ Chain pull for manual adjustment, approx. 2.0 m
- ▶ B: Bowden cable for manual adjustment, approx. 2.8 m

ISO Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Technical data

Nominal sizes	250, 355, 450, 560 mm
Minimum volume flow rate	205 - 785 l/s or 738 - 2826 m ³ /h

List of abbreviations

L_{WA} [dB(A)]	A-weighted sound power level of air-regenerated noise
\dot{V} [m^3/h] and [l/s]	Volume flow rate
Δt_z [K]	Supply air to room air temperature difference, i.e. supply air temperature minus room temperature
Δp_t [Pa]	Total differential pressure
A_{eff} [m^2]	Effective air discharge area
$\emptyset D$ [mm]	Outer diameter of the spigot
$\emptyset D_1$ [mm]	Outer diameter of a circular diffuser face
$\emptyset D_2$ [mm]	Diameter of a circular diffuser face style
$\emptyset D_3$ [mm]	Diameter of a circular plenum box
Q_1 [mm]	Outer diameter of a square diffuser face
Q_2 [mm]	Dimensions of a square diffuser face style
Q_3 [mm]	Dimensions of a square plenum box
H_1 [mm]	Distance (height) from the lower edge of the suspended ceiling to the lower edge of the diffuser face
H_2 [mm]	Height of a ceiling diffuser, from the lower edge of the suspended ceiling to the upper edge of the spigot
H_3 [mm]	Height of a ceiling diffuser with plenum box, from the lower edge of the suspended ceiling to the upper edge of the plenum box or of the spigot
A [mm]	Position of the spigot, defined by the distance of the spigot centre line to the lower edge of the suspended ceiling
C [mm]	Length of the spigot
m [kg]	Weight

All sound power levels are based on 1 pW.

Acoustically and technically optimised, for installation in walls and on rectangular and circular ducts, adjustable - made of plastic

8 Exposed surface

No entry: RAL 9010, pure white

S1 Similar to RAL 9006, white aluminium

Features

The new TJN jet nozzle offers improved acoustic properties and is also more energy-efficient

- ▶ Nominal sizes: 160, 200, 250, 315 and 400 mm
- ▶ Volume flow rate range 20 - 1000 l/s or 72 - 3600 m³/h
- ▶ Visible parts made of high-grade polymer in RAL white aluminium or pure white
- ▶ Optimised nozzle contours
- ▶ Discharge angle indication, discharge angle limiting and setting from -30 to +30° on a concealed scale
- ▶ Easy to remove face cover ring with bayonet fixing

Optional equipment and accessories

- ▶ 5 nominal sizes, each with a circular spigot or, as an option, with a connection piece for circular or rectangular ducts
- ▶ Swirl unit with acoustically optimised air control blades with unique saw tooth edges and cap for two-step reduction of the throw distance
- ▶ External electric actuator of compact height
- ▶ Electric actuator allows for integration with the central BMS
- ▶ Internal thermal actuator with shape memory alloy for the self-powered adjustment of the discharge angle
- ▶ All variants also available with outer casing

Application

- ▶ Type TJN jet nozzles for supply air discharge, with a long throw distance
- ▶ For production halls, gyms, theatres and conference rooms as well as for large internal spaces in airports, railway stations and shopping centres
- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ For supply air to room air temperature differences from -12 to +20 K
- ▶ Adjustable discharge angle, from -30 to +30°, for switching between heating and cooling mode
- ▶ For push fitting directly onto circular ducts or as a branch off circular or rectangular ducts

Variants

Connection

- ▶ For circular ducts (direct connection)
- ▶ K: For rectangular ducts
- ▶ R: For circular ducts

Actuator

- ▶ Manual adjustment
- ▶ E*: Electric actuator
- ▶ T1: Thermal actuator

Attachments

- ▶ C: Outer casing

Accessories

- ▶ Swirl unit and cap for throw distance reduction

Useful additions

- ▶ TDC temperature difference control module

Special characteristics

- ▶ Easy to remove face cover ring with bayonet fixing
- ▶ Swirl unit with acoustically optimised air control blades with unique saw tooth edges and cap for two-step reduction of the throw distance
- ▶ Discharge angle indication, discharge angle limiting and setting from -30 to +30° on a concealed scale
- ▶ Electric or thermal actuator as options

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Features

Adjustable and fixed jet nozzles achieve long throw distances and have excellent acoustic properties

- ▶ Nominal sizes: 100, 125, 160, 200, 250, 315 and 400 mm
- ▶ Volume flow rate range: 15 to 400 l/s or 54 to 1440 m³/h
- ▶ Visible parts made of aluminium
- ▶ For variable and constant volume flows
- ▶ Low sound power levels due to aerodynamically optimised nozzle contours
- ▶ Discharge angle can be adjusted manually or with an actuator
- ▶ Quick and easy to fix, concealed fixing

Optional equipment and accessories

- ▶ Exposed surface in RAL CLASSIC colours
- ▶ Circular spigot
- ▶ Connection pieces for circular and rectangular ducts
- ▶ Internal or external actuators for adjusting the discharge angle

Application

- ▶ Type DUK jet nozzles for supply air discharge, with a long throw distance
- ▶ For production halls, gymnasiums, theatres and conference rooms as well as for large internal spaces in airports, railway stations and shopping centres
- ▶ Attractive design element for building owners and architects with demanding aesthetic requirements
- ▶ For supply air to room air temperature differences from -12 to +20 K
- ▶ Adjustable discharge angle, from -30 to +30°, for switching between heating and cooling mode
- ▶ For push fitting directly onto circular ducts or as a branch off circular or rectangular ducts; also for installation into walls and bulkheads

- ▶ V-K: For rectangular ducts
- ▶ V-R: For circular ducts

Actuator

- ▶ Manual adjustment
- ▶ E*: External electric actuator

Useful additions

- ▶ TDC temperature difference control module

Special characteristics

- ▶ High discharge momentum, hence large penetration depth in heating mode
- ▶ Optimised nozzle contours
- ▶ Fixed and adjustable variants
- ▶ Discharge angle can be adjusted from -30° to +30°, either manually or with an actuator
- ▶ Electric actuator as an option

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

Variants

- ▶ F: Fixed jet nozzle
- ▶ V: Adjustable jet nozzle

Connection

- ▶ V-A: For circular ducts (direct connection)

Technical data

Nominal sizes	100, 125, 160, 200, 250, 315, 400 mm
Volume flow rate range	15 - 400 l/s or 54 - 1440 m ³ /h
Adjustable discharge angle	-30 to +30°
Supply air to room air temperature difference	-12 to +20 K

List of abbreviations

L_{WA} [dB(A)]	A-weighted sound power level of air-regenerated noise
\dot{V} [m^3/h] and [l/s]	Volume flow rate
Δt_z [K]	Supply air to room air temperature difference, i.e. supply air temperature minus room temperature
Δp_t [Pa]	Total differential pressure
A_{eff} [m^2]	Effective air discharge area
$\emptyset D$ [mm]	Outer diameter of the spigot
$\emptyset D_1$ [mm]	Outer diameter of a circular diffuser face
$\emptyset D_2$ [mm]	Diameter of a circular diffuser face style
$\emptyset D_3$ [mm]	Diameter of a circular plenum box
Q_1 [mm]	Outer diameter of a square diffuser face
Q_2 [mm]	Dimensions of a square diffuser face style
Q_3 [mm]	Dimensions of a square plenum box
H_1 [mm]	Distance (height) from the lower edge of the suspended ceiling to the lower edge of the diffuser face
H_2 [mm]	Height of a ceiling diffuser, from the lower edge of the suspended ceiling to the upper edge of the spigot
H_3 [mm]	Height of a ceiling diffuser with plenum box, from the lower edge of the suspended ceiling to the upper edge of the plenum box or of the spigot
A [mm]	Position of the spigot, defined by the distance of the spigot centre line to the lower edge of the suspended ceiling
C [mm]	Length of the spigot
m [kg]	Weight

All sound power levels are based on 1 pW.

Order code

LVS / 160

1 2

1 Type

LVS Extract air valve

2 Nominal size [mm]

100, 125, 160, 200

Features

Circular disc valves with manually adjustable annular gap

- ▶ Nominal sizes 100, 125, 160, 200 mm
- ▶ Volume flow rate range 10 - 50 l/s or 36 - 180 m³/h
- ▶ Diffuser face made of formed sheet steel, powder-coated
- ▶ For variable and constant volume flows
- ▶ For ceiling and wall installation

- ▶ Easy to install
- ▶ Volume flow rate balancing by simply turning the valve disc
- ▶ Inexpensive solution for small rooms

Special characteristics

- ▶ Continuous volume flow rate balancing by turning the valve disc
- ▶ Easy to install

Application

- ▶ Type LVS disc valves are used as extract air devices in small rooms
- ▶ For variable and constant volume flows
- ▶ For walls and suspended ceilings

ISO

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

List of abbreviations

L_{WA} [dB(A)]	A-weighted sound power level of air-regenerated noise
\dot{V} [m^3/h] and [l/s]	Volume flow rate
Δt_z [K]	Supply air to room air temperature difference, i.e. supply air temperature minus room temperature
Δp_t [Pa]	Total differential pressure
A_{eff} [m^2]	Effective air discharge area
$\emptyset D$ [mm]	Outer diameter of the spigot
$\emptyset D_1$ [mm]	Outer diameter of a circular diffuser face
$\emptyset D_2$ [mm]	Diameter of a circular diffuser face style
$\emptyset D_3$ [mm]	Diameter of a circular plenum box
Q_1 [mm]	Outer diameter of a square diffuser face
Q_2 [mm]	Dimensions of a square diffuser face style
Q_3 [mm]	Dimensions of a square plenum box
H_1 [mm]	Distance (height) from the lower edge of the suspended ceiling to the lower edge of the diffuser face
H_2 [mm]	Height of a ceiling diffuser, from the lower edge of the suspended ceiling to the upper edge of the spigot
H_3 [mm]	Height of a ceiling diffuser with plenum box, from the lower edge of the suspended ceiling to the upper edge of the plenum box or of the spigot
A [mm]	Position of the spigot, defined by the distance of the spigot centre line to the lower edge of the suspended ceiling
C [mm]	Length of the spigot
m [kg]	Weight

All sound power levels are based on 1 pW.

Made of aluminium

Order code

FBA - 3 - V - KF - SM - A / 150

1 2 3 4 5 6 7

1 Type

FBA Floor diffuser

2 Surface of diffuser core and trim ring

- 1 Deburred
- 3 Deburred, painted black, exposed surface skinned
- 4 Deburred, exposed surface skinned

3 Swirl unit (for air direction control)

No entry: none (vertical air discharge, no swirl)

V

Adjustable, set to vertical discharge

H

Adjustable, set to horizontal discharge

VF

Fixed, vertical discharge (only available for nominal size 200)

4 Installation

No entry: spacing ring for stepped holes

KF

Trim ring and spring clips

5 Dirt trap

No entry: none

SM Flow rate adjustment from rear

SV Flow rate adjustment from diffuser face

6 Plenum box

No entry: none

A With

7 Nominal size [mm]

150, 200

Features

Circular floor diffusers with low sound power levels as a consequence of optimum air distribution in the diffuser

- Nominal sizes: 150, 200 mm
- Volume flow rate range .. - .. l/s or .. - .. m³/h
- Circular diffuser face style
- Diffuser core made of aluminium
- For variable and constant volume flows
- For all types of false floors
- Horizontal or vertical air discharge
- The damper element can be adjusted from the diffuser face or from the underside
- Installation with or without trim ring
- High mechanical strength
- Ideal for comfort zones

Optional equipment and accessories

- Dirt trap, can also serve as a damper element
- Plenum box
- Multiple diffuser plenum box, also with damper element
- Swirl unit allows for ideal air direction control
- Trim ring with spring clips

Application

- Type FBA floor diffusers are used for comfort conditioning applications
- Attractive design element with various types of surfaces, for building owners and architects with demanding aesthetic requirements
- Swirling, vertical or horizontal air discharge to achieve mixed flow ventilation or low-turbulence displacement ventilation
- Comfortable and energy-efficient air distribution since the air pattern complements existing upward convection streams in the occupied zone
- Thermal loads are effectively dissipated
- For variable and constant volume flows
- For supply air to room air temperature differences from .. to .. K
- For all types of false floors

Variants

- FBA: Floor diffuser without trim ring
- FBA-KF: Floor diffuser with trim ring

Construction

- 1: Deburred diffuser core
- 3: Deburred diffuser core, painted black, exposed surface skinned
- 4: Deburred diffuser core, exposed surface skinned

Attachments

- Trim ring with spring clip
- Swirl unit
- Height-adjustable dirt trap

Accessories

- A: Plenum box

Useful additions

- Multiple diffuser plenum boxes Type GA

Special characteristics

- Floor diffusers with or without trim ring
- High crushing strength
- Quick and easy installation of floor diffusers with trim ring and spring clip fixing
- Anti-twist facility on the variant with trim ring
- With or without swirl unit to allow for different air patterns
- An dirt trap (optional) prevents contamination of the false floor and facilitates flow rate balancing

Standards and guidelines

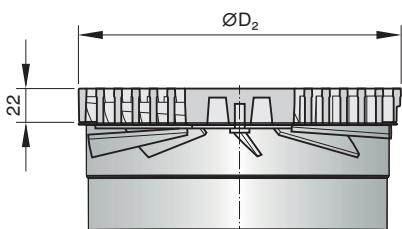

- Sound power level of the air-regenerated noise measured according to EN ISO 5135

Features

Circular and square staircase swirl diffusers

- ▶ Nominal size 180 mm
- ▶ Volume flow rate range 10 - 25 l/s or 36 - 90 m³/h
- ▶ Diffuser face made of sheet steel, powder-coated
- ▶ For variable and constant volume flows
- ▶ For false floors and positive pressure plenums
- ▶ Installation into the risers of steps or into horizontal or sloping floor areas which do not carry foot traffic
- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity
- ▶ Low sound power level due to optimised air distribution inside the diffuser

Optional equipment and accessories

- ▶ Exposed diffuser face available in RAL CLASSIC colours
- ▶ Spigot
- ▶ Cross bar

Application

- ▶ Type SD staircase swirl diffusers are primarily used as supply air diffusers for comfort conditioning applications
- ▶ For auditoriums in theatres, cinemas or concert halls
- ▶ Supply air discharge directly to the occupied zone
- ▶ Swirling air discharge, either parallel to the installation surface or angled, for mixed flow ventilation
- ▶ The efficient swirl creates high induction levels, thereby rapidly reducing the temperature difference and airflow velocity (supply air variant)
- ▶ For variable and constant volume flows
- ▶ For supply air to room air temperature differences from -6 to +6 K
- ▶ For false floors and positive pressure plenums
- ▶ Installation into the risers of steps or into horizontal or sloping floor areas which do not carry foot traffic

▶ SD-Q-LR: Square diffuser face, circular face style

▶ SD-R-LR: Circular diffuser face, circular face style

Attachments

- ▶ S: Spigot
- ▶ T: Cross bar

Special characteristics

- ▶ High induction results in a rapid reduction of the temperature difference and airflow velocity
- ▶ Air discharge either parallel to the installation surface or angled
- ▶ Excellent air quality since the supply air is discharged directly to the occupied zone
- ▶ Installation into the risers of steps and into floor areas which do not carry foot traffic

Standards and guidelines

- ▶ Sound power level of the air-regenerated noise measured according to EN ISO 5135

For the temperature-based control of adjustable air terminal devices, for heating or cooling mode

Order code

LON – WA TDC

1

1 Type

LON-WA TDC Module for the control of supply air based on the supply air to room air difference

Features

- Ideal adjustment of the discharge angle to varying loads
- For adjustable air terminal devices
- Heating, cooling, isothermal operation
- Adjustment of the discharge direction based on the supply air to room air temperature
- Bespoke solutions, adjustment of the characteristic
- For up to 20 heating/cooling actuators (3-point)
- For up to 10 modulating rotary actuators or 5 modulating spindle actuators
- Override controls

Application

- Type LON-WA TDC control modules for the temperature-based control of adjustable air terminal devices, for heating or cooling mode
- For air terminal devices Types VD, VDL, VDR, QSH, ISH, TJN, DUK and DG-VAR
- Heating, cooling, isothermal operation
- Analogue output for modulating actuators
- Digital output for 3-point actuators
- LonWorks interface for the transmission of standard network variables
- A plug-in for all LNS-based network integration tools (LNS version 3.3 and higher) is available for configuration

Special characteristics

- Bespoke solutions since the characteristic can be adjusted
- Temperature values are transmitted as voltage signals or network variables
- Control input for actuators with a modulating signal (0 - 10 V DC) or 3-point (24 V AC)
- Override control functions for heating up, variable operation, heating, cooling and isothermal operation

Technical data

Supply voltage	24 V AC ± 15 %, 50/60 Hz
Power rating	3.5 VA
Communication interface	LonWorks transceiver FTT-10A (free topology, twisted pair)
Connection to LonWorks network	4 terminals for cables with a cross section between 0.08 and 2.5 mm ² , with reverse polarity protection
Operating temperature	0 - 50 °C
IEC protection class	III (protective extra-low voltage)
Protection level	IP 65
EC conformity	EMC to 2004/108/EU, low voltage to 2006/95/EU
Dimensions (B x H x T)	160 x 120 x 42 mm

For switching between the heating and cooling modes of adjustable air terminal devices

Features

Actuators for air terminal devices Types VD, VDL, VDR, QSH, ISH, TJN and DUK

- ▶ Change of the discharge direction for two different operating situations
- ▶ Supply voltage 24 V AC/DC or 230 V AC

- ▶ Control input signal: 1-wire control or 2-wire control (3-point)

and cooling modes of air terminal devices
▶ Adjustment of the air discharge direction

Application

- ▶ Actuators for switching between the heating

Useful additions

- ▶ TDC temperature difference control module

Actuators for air terminal devices

E1	M466EM8	NM230A	230 V AC	VD, VDL, VDR, DUK
E2	M466EM9	NM24A	24 V AC/DC	VD, VDL, VDR, DUK
E4	M466CF0	223E-230-150-003	230 V AC	QSH, ISH, DUK
E5	M466CF1	223E-024-150-002	24 V AC	QSH, ISH, DUK
E7	M466EP5	CM230-F	230 V AC	TJN
E8	M466EP4	CM-24-F	24 V AC/DC	TJN

Features

Actuators for air terminal devices Types VD, VDL, VDR, QSH, ISH, TJN and DUK

- ▶ Change of the discharge direction for two different operating situations

- ▶ Supply voltage 24 V AC/DC or 230 V AC
- ▶ Control input signal: 1-wire control or 2-wire control (3-point)

Application

- ▶ Actuator NM230A
- ▶ For switching between the heating and cooling modes of air terminal devices, suitable for Types VD, VDL, VDR and DUK

Actuator NM230A

Supply voltage	100 - 240 V AC -15 % +10 %, 50/60 Hz
Power rating	5.5 VA max.
Torque	10 Nm
Running time for 90°	150 s
Control input signal	1-wire control or 2-wire control (3-point)
Connecting cable	3 x 0.75 mm ² , 1 m long
IEC protection class	II (protective insulation)
Protection level	IP 54
EC conformity	EMC to 2014/30/EU, low voltage to 2014/35/EU, RoHS to 2011/65/EU
Operating temperature	-30 to 50 °C
Weight	0.75 kg

+ Features

Actuators for air terminal devices Types VD, VDL, VDR, QSH, ISH, TJN and DUK

- ▶ Change of the discharge direction for two different operating situations

- ▶ Supply voltage 24 V AC/DC or 230 V AC
- ▶ Control input signal: 1-wire control or 2-wire control (3-point)

Z Application

- ▶ Actuator NM24A
- ▶ For switching between the heating and cooling modes of air terminal devices, suitable for Types VD, VDL, VDR and DUK

Actuator NM24A

Supply voltage (AC)	24 V AC ± 20 %, 50/60 Hz
Supply voltage (DC)	24 V DC ±20 %
Power rating (AC)	3.5 VA max.
Power rating (DC)	1.5 W max.
Torque	10 Nm
Running time for 90°	150 s
Control input signal	1-wire control or 2-wire control (3-point)
Connecting cable	3 × 0.75 mm ² , 1 m long
IEC protection class	III (protective extra-low voltage)
Protection level	IP 54
EC conformity	EMC to 2014/30/EU, RoHS to 2011/65/EU
Operating temperature	-30 to 50 °C
Weight	0.75 kg

+ Features

Actuators for air terminal devices Types VD, VDL, VDR, QSH, ISH, TJN and DUK

- ▶ Change of the discharge direction for two different operating situations
- ▶ Supply voltage 24 V AC/DC or 230 V AC

- ▶ Control input signal: 1-wire control or 2-wire control (3-point)

Z Application

- ▶ Actuator Type 223E-230-150-003

- ▶ For switching between the heating and cooling modes of air terminal devices, suitable for Types QSH, ISH and DUK
- ▶ Linear actuator for concealed installation inside air terminal devices; preferred solution for air terminal devices installed exposed

Actuator 223E-230-150-003

Supply voltage	195 - 265 V AC, 50/60 Hz
Power rating	3.5 VA
Lifting force and thrust	150 N
Running time	26.9 mm/min
Control input signal	2-wire control (3-point)
Connecting cable	3 x 0.75 mm ² , 1.8 m long
IEC protection class	II (protective insulation)
Protection level	IP 42
EC conformity	EMC to 2014/30/EU, low voltage to 2014/35/EU
Operating temperature	-20 to 60 °C
Weight	0.230 kg

Features

- Actuators for air terminal devices Types VD, VDL, VDR, QSH, ISH, TJN and DUK
- ▶ Change of the discharge direction for two different operating situations
 - ▶ Supply voltage 24 V AC/DC or 230 V AC

- ▶ Control input signal: 1-wire control or 2-wire control (3-point)

Application

- ▶ Actuator Type 223E-24-150-002

- ▶ For switching between the heating and cooling modes of air terminal devices, suitable for Types QSH, ISH and DUK
- ▶ Linear actuator for concealed installation inside air terminal devices; preferred solution for air terminal devices installed exposed

Actuator 223E-024-150-002

Supply voltage	24 V AC ± 10 %, 50/60 Hz
Power rating	3 VA
Lifting force and thrust	150 N
Running time	26.9 mm/min
Control input signal	2-wire control (3-point)
Connecting cable	3 x 0.75 mm ² , 1.8 m long
IEC protection class	III (protective extra-low voltage)
Protection level	IP 42
EC conformity	EMC according to 2014/30/EU
Operating temperature	-20 to 60 °C
Weight	0.230 kg

Features

Actuators for air terminal devices Types VD, VDL, VDR, QSH, ISH, TJN and DUK

- ▶ Change of the discharge direction for two different operating situations
- ▶ Supply voltage 24 V AC/DC or 230 V AC
- ▶ Control input signal: 1-wire control or 2-wire control (3-point)

Application

- ▶ Actuator Type CM230-F
- ▶ For switching between the heating and cooling modes of air terminal devices, suitable for Type TJN

Actuator CM230-F

Supply voltage	100 to 240 V AC -15 % +10 %, 50/60 Hz
Power rating	3 VA
Torque	2 Nm
Running time for 90°	75 s
Control input signal	1-wire control or 2-wire control (3-point)
Connecting cable	3 x 0.75 mm ² , 1 m long
IEC protection class	II (protective insulation)
Protection level	IP 54
EC conformity	EMC to 2014/30/EU, low voltage to 2014/35/EU, RoHS to 2011/65/EU
Operating temperature	-30 to 50 °C
Weight	0.185 kg

Features

Actuators for air terminal devices Types VD, VDL, VDR, QSH, ISH, TJN and DUK

- ▶ Change of the discharge direction for two different operating situations
- ▶ Supply voltage 24 V AC/DC or 230 V AC
- ▶ Control input signal: 1-wire control or 2-wire control (3-point)

Application

- ▶ Actuator Type CM24-F
- ▶ For switching between the heating and cooling modes of air terminal devices, suitable for Type TJN

Actuator CM24-F

Supply voltage (AC)	24 V AC ± 20 %, 50/60 Hz
Supply voltage (DC)	24 V DC ± 20 %
Power rating (AC)	1 VA max.
Power rating (DC)	0.5 W max.
Torque	2 Nm
Running time for 90°	75 s
Control input signal	1-wire control or 2-wire control (3-point)
Connecting cable	3 x 0.75 mm ² , 1 m long
IEC protection class	III (protective extra-low voltage)
Protection level	IP 54
EC conformity	EMC to 2014/30/EU, RoHS to 2011/65/EU
Operating temperature	-30 to 50 °C
Weight	0.185 kg

For modulating operation and for switching between the heating and cooling modes of adjustable air terminal devices

+ Features

Modulating actuators for air terminal devices
Types VD, VDL, VDR, QSH, ISH, TJN and DUK
► Modulating operation and change of the discharge direction for two different operating situations
► Supply voltage 24 V AC/DC

- Control input signal: Control signal voltage, modulating, 0 (2) - 10 V

- terminal devices
- Adjustment of the air discharge direction

X Application

- Actuators for variable adjustment
- Modulating operation of adjustable air

⊕ Useful additions

- TDC temperature difference control module

Actuators for air terminal devices

E3	M466EN0	NM24A-SR	24 V AC/DC	VD, VDL, VDR, DUK
E6	M466CF2	223F-024-150-001	24 V AC/DC	QSH, ISH, DUK
E9	A00000030324	CM24-SX-F	24 V AC/DC	TJN

Actuator NM24A-SR

Supply voltage (AC)	24 V AC ± 20 %, 50/60 Hz
Supply voltage (DC)	24 V DC ± 20 %
Power rating (AC)	4 VA max.
Power rating (DC)	2 W max.
Torque	10 Nm
Running time for 90°	150 s
Control signal	2 - 10 V DC, $R_a > 100 \text{ k}\Omega$
Connecting cable	4 × 0.75 mm², 1 m long
IEC protection class	III (protective extra-low voltage)
Protection level	IP 54
EC conformity	EMC to 2014/30/EU, RoHS to 2011/65/EU
Operating temperature	-30 to 50 °C
Weight	0.8 kg

Features

Modulating actuators for air terminal devices
Types VD, VDL, VDR, QSH, ISH, TJN and DUK

- ▶ Modulating operation and change of the discharge direction for two different operating situations
- ▶ Supply voltage 24 V AC/DC

- ▶ Control input signal: Control signal voltage, modulating, 0 (2) - 10 V

Application

- ▶ Actuator Type 223F-024-150-001
- ▶ For modulating operation and for switching

between the heating and cooling modes of air terminal devices, suitable for Types QSH, ISH and DUK

- ▶ Linear actuator for concealed installation inside air terminal devices; preferred solution for air terminal devices installed exposed

Actuator 223F-24-150-001

Supply voltage (AC)	24 V AC ± 20 %, 50/60 Hz
Supply voltage (DC)	24 V DC ±20 %
Power rating (AC)	8.5 VA
Power rating (DC)	5 W
Lifting force and thrust	150 N
Running time	28 mm/min
Control signal	0 - 10 V DC, $R_a > 100 \text{ k}\Omega$
Connecting cable	3 x 0.75 mm ² , 1.8 m long
IEC protection class	III (protective extra-low voltage)
Protection level	IP 30
EC conformity	EMC according to 2014/30/EU
Operating temperature	-20 to 60 °C
Weight	0.650 kg

Features

Modulating actuators for air terminal devices
Types VD, VDL, VDR, QSH, ISH, TJN and DUK

- ▶ Modulating operation and change of the discharge direction for two different

operating situations

- ▶ Supply voltage 24 V AC/DC
- ▶ Control input signal: Control signal voltage, modulating, 0 (2) - 10 V

Application

- ▶ Actuator Type CM24-SX-F for changing the discharge direction of air terminal devices Type TJN

Actuator CM24-SX-F

Supply voltage (AC)	24 V AC ± 20 %, 50/60 Hz
Supply voltage (DC)	24 V DC ± 20 %
Power rating (AC)	1.5 VA max.
Power rating (DC)	1 W max.
Torque	2 Nm
Running time for 90°	75 s
Control signal	2 - 10 V DC, $R_a > 100 \text{ k}\Omega$
Connecting cable	4 x 0.75 mm ² , 1 m long
IEC protection class	III (protective extra-low voltage)
Protection level	IP 20
EC conformity	EMC according to 2014/30/EU
Operating temperature	-30 to 50 °C
Weight	0.200 kg

For switching between the heating and cooling modes of adjustable air terminal devices

Features

Thermal actuators for air terminal devices
Types QSH, ISH and TJN
 ▶ Modulating change of the discharge direction for different operating situations
 ▶ Mechanical self-powered

- ▶ Shape memory alloy or wax as actuation material

- ▶ adjustment
- ▶ Modulating operation of adjustable air terminal devices
- ▶ Adjustment of the air discharge direction

Application

- ▶ Actuators for self-powered variable

Thermal actuators for air terminal devices

T	M456BE0	QSH, ISH
T1	A00000039387	TJN

Thermal actuator T

Work areas	15 - 35 °C
Travel	10 mm

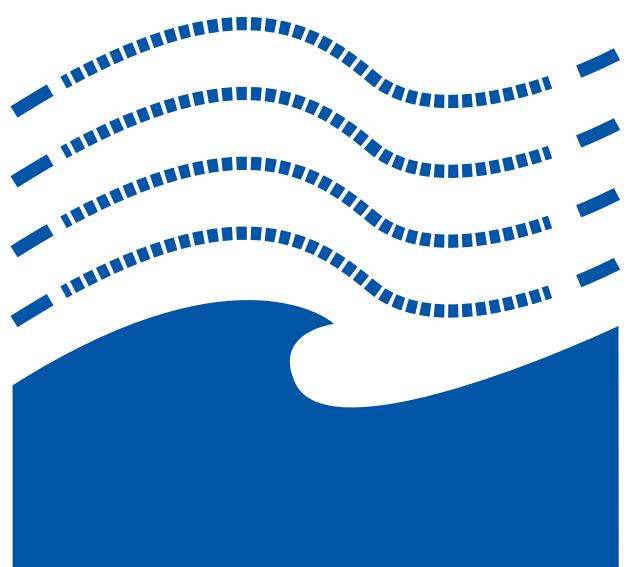

Thermal actuator T1

Work areas	18 - 32 °C
Travel	10 mm
Weight	0.15 kg

Air-water systems

6 Air-water systems

6.1 Induction units for suspended ceilings

	Active chilled beam with two-way air discharge, 300 mm nominal width, vertical heat exchanger and condensate drip tray	DID312	408
	Active chilled beam with two-way air discharge, 300 mm nominal width, with horizontal heat exchanger	DID300B	414
	Active chilled beam with two-way air discharge and horizontal heat exchanger, suitable for grid ceilings with grid size 600 or 625	DID632	422
	Super flat active chilled beam with two-way air discharge and horizontal heat exchanger, suitable for grid ceilings with grid size 600 or 625	DID642	429
	Active chilled beam with two-way air discharge, horizontal heat exchangers and integral lighting, suitable for grid ceilings with grid size 600	Type DID600B-L	435
	Active chilled beam with four-way air discharge, vertical heat exchanger and condensate drip tray, for grid ceilings with grid size 600 or 625	DID604	445
	Active chilled beam with four-way air discharge and horizontal heat exchanger, suitable for grid ceilings with grid size 600 or 625	DID614	449
	Active chilled diffuser with radial air discharge, 600 or 625 mm nominal width, vertical heat exchanger and condensate drip tray	DID-R	453

6.2 Active chilled beams for bulkhead or wall installation

	Active chilled beam with one-way air discharge and horizontal heat exchanger, in nominal lengths of 900, 1200 and 1500 mm	DID-E	456
---	---	-------	-----

6.3 Freely suspended units

Multi-service active chilled beam with two-way air discharge and horizontal heat exchanger

SMART BEAM 460

Induction unit for ceiling installation, with one-way or two-way air discharge, vertical heat exchanger and condensate drip tray

IDH 463

6.4 Wall and under sill induction units

Induction-type displacement flow diffuser in nominal lengths of 900, 1200 and 1500 mm, with vertical heat exchanger and condensate drip tray

QLI 466

6.5 Under sill induction units

Under sill induction unit in nominal lengths of 600, 900, and 1200 mm, with vertical heat exchanger and condensate drip tray

IDB 469

6.6 Under floor induction units

Under floor induction unit in nominal lengths of 900 to 1500 mm, with horizontal heat exchanger

BID 472

6.7 Passive chilled beams

Passive chilled beam in nominal lengths of up to 3000 mm and with a horizontal heat exchanger

PKV 476

6.8 Control equipment for air-water systems

Stand-alone single room control equipment to control the water-side components in air-water systems

LWS control equipment 479

Stand-alone single room control equipment to control the water-side components in air-water systems

LWS control equipment - VS 480

6.9 Connecting hoses

Connecting hoses for the water-side connection of air-water systems and decentralised ventilation units

List of abbreviations

L_{WA} [dB(A)]	A-weighted sound power level of air-regenerated noise
t_{Pr} [°C]	Primary air temperature
t_{WV} [°C]	Water flow temperature - cooling/heating
t_R [°C]	Room temperature
t_{AN} [°C]	Secondary air intake temperature
Q_{Pr} [W]	Thermal output - primary air
Q_{tot} [W]	Thermal output - total
Q_W [W]	Thermal output - water side, cooling/heating
\dot{V}_{Pr} [l/s/m ³ /h]	Primary air volume flow rate
\dot{V}_W [l/h]	Water flow rate - cooling/heating
\dot{V} [l/h]	Volume flow rate
Δt_W [K]	Temperature difference - water
Δp_W [kPa]	Water-side pressure loss
Δp_t [Pa]	Total pressure drop, air side
$\Delta t_{Pr} = t_{Pr} - t_R$ [K]	Difference between primary air temperature and room temperature
$\Delta t_{RWV} = t_{WV} - t_R$ [K]	Difference between water flow temperature and room temperature
Δt_{Wm-Ref} [K]	Difference between mean water temperature and reference temperature
L_N [mm]	Nominal length

The maximum water-side operating pressure for all heat exchangers is 6 bar.

Active chilled beam with two-way air discharge, 300 mm nominal width, vertical heat exchanger and condensate drip tray

VS With

Features

Active chilled beam for heating and cooling, with 2-pipe or 4-pipe heat exchanger, for integration with various ceiling systems. The condensate drip tray is useful if the temperature temporarily falls below the dew point.

- Preferably for room heights up to 4.00 m
- High heating and cooling capacity with a low conditioned primary air volume flow rate and low sound power level
- High comfort levels due to low airflow velocity in the occupied zone
- Three nozzle variants to optimise induction based on demand
- Hinged, removable induced air grille in four designs

Optional equipment and accessories

- Control system
- Additional casing for extract air

- Heat exchanger powder-coated black
- Powder coating in many different colours, e.g. RAL CLASSIC

Application

- Active chilled beams of Type DID312 for the integration into various ceiling systems, preferably for room heights up to 4.00 m
- The vertical heat exchangers and the condensate drip tray are useful if the temperature temporarily falls below the dew point.
- 2-pipe or 4-pipe heat exchangers enable good comfort levels with a low conditioned primary air volume flow rate
- Energy-efficient solution since water is used for heating and cooling

Variants

- DID312-LR: With induced air grille - perforated sheet metal, circular holes
- DID312-LQ: With induced air grille - perforated sheet metal, square holes
- DID312-GL: With induced air grille - longitudinal blades
- DID312-GQ: With induced air grille - transverse blades

Heat exchanger

- 2: 2-pipe systems
- 4: 4-pipe systems

Nozzle variants

- Z: Small plus
- M: Medium
- G: Large

Construction

- Powder-coated RAL 9010, pure white, gloss level 50 %
- P1: Powder-coated in any other RAL colour, gloss level 70 %
- P1: Powder-coated RAL 9006, white aluminium, gloss level 30 %

Useful additions

- Connecting hoses
- Control equipment consisting of a control panel including a controller with integral room temperature sensor; valves and valve actuators; and lockshields
- X-AIRCONTROL control system

ISO Standards and guidelines

- Products are certified by Eurovent (no. 09.12.432) and listed on the Eurovent website
- Declaration of hygiene conformity to VDI 6022

Attachments

- Additional casing for extract air, with side spigot
- Water connection A1: G½" external thread and flat seal
- Water connection A2: G½" union nut and flat seal

Special characteristics

- The vertical heat exchanger with condensate drip tray is useful if the temperature temporarily falls below the dew point
- Hinged, removable induced air grille in four designs

Technical data

Nominal length	900, 1200, 1500, 1800, 2100, 2400, 2700, 3000 mm
Length	893 - 3000 mm
Height	210/241 mm
Width	293, 300, 312 mm
Primary air spigot, diameter	123/158 mm
Primary air volume flow rate	5 - 70 l/s or 18 - 252 m³/h
Cooling capacity	Up to 1830 W
Heating capacity	Up to 1240 W
Max. operating pressure, water side	6 bar
Max. operating temperature	75 °C

Construction

- ▶ Powder-coated RAL 9010, pure white, gloss level 50 %
- ▶ P1: Powder-coated in any other RAL colour, gloss level 70 %
- ▶ P1: Powder-coated RAL 9006, white aluminium, gloss level 30 %

Attachments

- ▶ Additional casing for extract air, with side or top spigot
- ▶ Water connection A1: G $\frac{1}{2}$ " external thread and flat seal
- ▶ Water connection A2: G $\frac{1}{2}$ " union nut and flat seal

Accessories

- ▶ Support angles for installation into linear beam grid ceilings

Useful additions

- ▶ Connecting hoses
- ▶ Control equipment consisting of a control panel including a controller with integral room temperature sensor; valves and valve actuators; and lockshields
- ▶ X-AIRCONTROL control system

Special characteristics

- ▶ Side entry or top entry primary air spigot
- ▶ Horizontal heat exchanger as 2-pipe or 4-pipe system
- ▶ Internal nozzle plate with punched nozzles (non-combustible)
- ▶ Water connections at the narrow side, Ø12 mm Cu pipe, either with plain tails or with external thread or union nut, G $\frac{1}{2}$ ", flat seal

Standards and guidelines

- ▶ Products are certified by Eurovent (no. 09.12.432) and listed on the Eurovent website
- ▶ Declaration of hygiene conformity to VDI 6022

Technical data

Nominal length	900, 1200, 1500, 1800, 2100, 2400, 2700, 3000 mm										
Length	893 - 3000 mm										
Height	210 mm										
Width	293 mm										
Primary air spigot, diameter	123/158 mm										
Primary air volume flow rate	3 - 43 l/s or 11 - 155 m ³ /h										
Cooling capacity	Up to 1345 W										
Heating capacity	Up to 1480 W										
Max. operating pressure, water side	6 bar										
Max. operating temperature	75 °C

Features

Active chilled beam for heating and cooling, with 2-pipe or 4-pipe heat exchanger, for integration with various ceiling systems

- Preferably for room heights up to 4.0 m
- High heating and cooling capacity with a low conditioned primary air volume flow rate and low sound power level
- Four nozzle variants to optimise induction based on demand
- Hinged, removable induced air grille in four designs

Optional equipment and accessories

- Control system
- Additional casing for extract air
- Heat exchanger powder-coated black
- Powder coating in many different colours,

e.g. RAL CLASSIC

- Adjustable air control blades for air direction control
- With an extended border also suitable for freely suspended installation

primary air volume flow rate

- Energy-efficient solution since water is used for heating and cooling

Application

- Active chilled beams of Type DID632 for the integration into various ceiling systems, preferably for room heights up to 4.0 m
- Particularly suitable for grid ceilings with grid size 600 or 625
- Adjustable air control blades (optional) allow for the manual adjustment of the air discharge direction
- 2-pipe or 4-pipe heat exchangers enable good comfort levels with a low conditioned

Variants

- DID632-LR: With induced air grille - perforated sheet metal, circular holes
- DID632-LQ: With induced air grille - perforated sheet metal, square holes
- DID632-GL: With induced air grille - longitudinal blades
- DID632-GQ: With induced air grille - transverse blades

Heat exchanger

- 2: 2-pipe systems
- 4: 4-pipe systems

Nozzle variants
 ▶ Z: Small plus
 ▶ M: Medium
 ▶ G: Large
 ▶ U: Extra large

- (45° connection)
 ▶ Water connection A1: G $\frac{1}{2}$ " external thread and flat seal
 ▶ Water connection A2: G $\frac{1}{2}$ " union nut and flat seal
 ▶ Adjustable air control blades for air direction control

- ▶ Adjustable air control blades for air direction control
- ▶ Hinged, removable induced air grille in four designs
- ▶ Horizontal heat exchanger as 2-pipe or 4-pipe system
- ▶ Internal nozzle plate with punched nozzles (non-combustible)
- ▶ Water connections at the narrow side, Ø12 mm Cu pipe, either with plain tails or with G $\frac{1}{2}$ " external thread and flat seal

Construction

- ▶ Powder-coated RAL 9010, pure white, gloss level 50 %
- ▶ P1: Powder-coated in any other RAL colour, gloss level 70 %
- ▶ P1: Powder-coated RAL 9006, white aluminium, gloss level 30 %

Useful additions

- ▶ Connecting hoses
- ▶ Control equipment consisting of a control panel including a controller with integral room temperature sensor; valves and valve actuators; and lockshields
- ▶ X-AIRCONTROL control system

Standards and guidelines

- ▶ Products are certified by Eurovent (no. 09.12.432) and listed on the Eurovent website
- ▶ Declaration of hygiene conformity to VDI 6022

Attachments

- ▶ Additional casing with extract air spigot

Special characteristics

Technical data

Nominal length	900, 1200, 1500, 1800, 2100, 2400, 2700, 3000 mm									
Length	893 - 3000 mm									
Height	210 mm									
Width	593, 598, 618, 623 mm									
Primary air spigot, diameter	123/158 mm									
Primary air volume flow rate	6 - 85 l/s or 22 - 306 m ³ /h									
Cooling capacity	Up to 2450 W									
Heating capacity	Up to 2970 W									
Max. operating pressure, water side	6 bar									
Max. operating temperature	75 °C

Differences in width and LE can be neglected

Super flat active chilled beam with two-way air discharge and horizontal heat exchanger, suitable for grid ceilings with grid size 600 or 625

Order code

DID642 – D1 – 2 – HE – RR – AV – A1 / 1200 × 900 – 593 / 123 / 158 / P1 – RAL ... / LE / VS / KV – 0,63 / HV – 0,4 / R

[1] Type

DID642 Active chilled beam

[2] Induced air grille

No entry: Perforated metal facing, decreasing apertures towards the edges
D1 Perforated metal facing

[3] Heat exchanger

2 For 2-pipe systems
4 For 4-pipe systems

[4] Nozzle variant

HE	Small
S1	Medium
S2	Large
HP	Extra large
DA	Adjustable twin nozzles, all nozzles are open (factory setting) Sizing options: Adjustable twin nozzles, all nozzles are open (factory setting), adjustment during commissioning by others
DB	Larger nozzles are open
DS	Smaller nozzles are open

LL	Casing left side, Water connections left side
LR	Casing left side, Water connections right side
RL	Casing right side, Water connections left side

[RR]

Casing right side, Water connections right side

[6] Additional casing - function and arrangement

No entry: none
Constructions LL, RR, are only available from $L = L_N + 250$ mm
AV Extract air, spigot at the front
AH Extract air, spigot at the rear
ZV Supply air, spigot at the front
ZH Supply air, spigot at the rear

[7] Water connections

No entry: Pipe with plain tails Ø12 mm
A1 With G½" external thread and flat seal
A2 With G½" union nut and flat seal
[8] Unit size [mm]
 $L \times L_N - B$
Total length (diffuser face) × nominal size - width of front frame
 L is up to 7 mm shorter than L_N

[9] Primary air spigot - diameter

123, 158, 2x123, 2x158

[10] Additional casing - spigot diameter

Only for AV, AH, ZV, ZH

123, 158

[11] Exposed surface

No entry: powder-coated RAL 9010, pure white

[P1]

Powder-coated, specify RAL Classic colour
Gloss level
RAL 9010 50 %
RAL 9006 30 %
All other RAL colours 70 %

[12] Air control blades

No entry: none
LE With air control blades

[13] Valves and actuators

No entry: no control components
VS With control components (supplied separately)

[14] Cooling valve

No entry: none
KV Cooling valve with actuator

[15] kVS value - cooling valve

0.25, 0.40, 0.63, 1.00

[16] Heating valve

No entry: none
HV Heating valve with actuator

[17] kVS value - heating valve

0.25, 0.40, 0.63, 1.00

[18] Lockshield

No entry: none
R With lockshield(s)

Features

Active chilled beam for heating and cooling, with 2-pipe or 4-pipe heat exchanger, for integration with various ceiling systems

- ▶ Preferably for room heights up to 4.0 m
- ▶ High heating and cooling capacity with a low conditioned primary air volume flow rate and low sound power level
- ▶ Five nozzle variants to optimise induction based on demand, including adjustable twin nozzles, i.e. one pair of nozzles with different diameters
- ▶ Hinged, removable induced air grille in two designs

Optional equipment and accessories

- ▶ Control package
- ▶ Additional casing for both supply air and extract air, or for additional supply air
- ▶ Supply air and extract air units upon request
- ▶ Adjustable air control blades for air direction control
- ▶ Heat exchanger powder-coated black
- ▶ Powder coating in many different colours, e.g. RAL CLASSIC
- ▶ With an extended border also suitable for freely suspended installation

Application

- ▶ Active chilled beams of Type DID642 for the integration into various ceiling systems, preferably for room heights up to 4.0 m
- ▶ Particularly suitable for grid ceilings with grid size 600 or 625
- ▶ 2-pipe or 4-pipe heat exchangers enable good comfort levels with a low conditioned primary air volume flow rate
- ▶ Energy-efficient solution since water is used for heating and cooling
- ▶ Adjustable air control blades (optional) allow for the manual adjustment of the air discharge direction

**Variants**

Induced air grille

- Perforated metal facing, decreasing apertures towards the edges
- D1: Perforated metal facing

Heat exchanger

- 2: For 2-pipe systems
- 4: For 4-pipe systems

Nozzle variants

- HE: Small
- S1: Medium
- S2: Large
- HP: Extra large
- DA: Adjustable twin nozzles, all nozzles are open (factory setting)
- DS: Adjustable twin nozzles, smaller nozzles are open
- DS: Adjustable twin nozzles, larger nozzles are open

DS and DB can be set according to local requirements. You should order DA and have DS or DB set by others.

**Construction**

- Powder-coated RAL 9010, pure white, gloss level 50 %

**Technical data**

Nominal length	900, 1200, 1500, 1800, 2100, 2400, 2700, 3000 mm									
Length	893 - 3000 mm									
Height	170/205 mm									
Width	593, 598, 618, 623 mm									
Primary air spigot, diameter	123/158 mm									
Primary air volume flow rate	10 - 125 l/s or 36 - 450 m ³ /h									
Cooling capacity	Up to 3100 W									
Heating capacity	Up to 2330 W									
Max. operating pressure, water side	6 bar									
Max. operating temperature	75 °C

**Attachments**

- 1 or 2 strip light fittings, with 1 tube, Zumtobel brand (Zumtobel light fitting is also available with 2 tubes as an option)
- Additional extract air casing with side or top extract air spigot
- Water connection A1: G $\frac{1}{2}$ " external thread and flat seal
- Water connection A2: G $\frac{1}{2}$ " union nut and flat seal

**Accessories**

- Support angles for installation into linear beam grid ceilings

**Technical data**

Nominal length	900, 1200, 1500, 1800, 2100, 2400, 2700, 3000 mm
Length	1493 - 3000 mm
Height	210 mm
Width	593 mm
Primary air spigot, diameter	123/158 mm
Primary air volume flow rate	3 - 43 l/s or 11 - 155 m ³ /h
Cooling capacity	Up to 1515 W
Heating capacity	Up to 1780 W
Max. operating pressure, water side	6 bar
Max. operating temperature	75 °C

Quick sizing

Features

Active chilled beam for heating and cooling, with 2-pipe or 4-pipe heat exchanger, for integration with various ceiling systems. The condensate drip tray is useful if the temperature temporarily falls below the dew point.

- ▶ Preferably for room heights up to 4.00 m
- ▶ High heating and cooling capacity with a low conditioned primary air volume flow rate and low sound power level
- ▶ High comfort levels due to low airflow velocity in the occupied zone
- ▶ Three nozzle variants to optimise induction based on demand
- ▶ Removable induced air grille, fixed with magnets

Optional equipment and accessories

- ▶ Control system
- ▶ Adjustable air control blades for air direction control
- ▶ Heat exchanger powder-coated black
- ▶ Powder coating in many different colours, e.g. RAL CLASSIC

Application

- ▶ Active chilled beams of Type DID604 for the integration into various ceiling systems, preferably for room heights up to 4.00 m
- ▶ Particularly suitable for grid ceilings with grid size 600 or 625
- ▶ The condensate drip tray is useful if the temperature temporarily falls below the dew point
- ▶ Adjustable air control blades (optional) allow for the manual adjustment of the four-way air discharge
- ▶ 2-pipe or 4-pipe heat exchangers enable good comfort levels with a low conditioned primary air volume flow rate
- ▶ Energy-efficient solution since water is used for heating and cooling

Variants

Heat exchanger

- ▶ 2: 2-pipe systems
- ▶ 4: 4-pipe systems

Nozzle variants

- ▶ Z: Small plus
- ▶ M: Medium
- ▶ G: Large

Construction

- ▶ Powder-coated RAL 9010, pure white, gloss level 50 %
- ▶ **P1:** Powder-coated in any other RAL colour, gloss level 70 %
- ▶ **P1:** Powder-coated RAL 9006, white aluminium, gloss level 30 %

Attachments

- ▶ Adjustable air control blades
- ▶ Water connection A1: G½" external thread and flat seal
- ▶ Water connection A2: G½" union nut and flat seal

Useful additions

- ▶ Connecting hoses
- ▶ Control equipment consisting of a control panel including a controller with integral room temperature sensor; valves and valve actuators; and lockshields
- ▶ X-AIRCONTROL

Special characteristics

- The vertical heat exchanger with condensate drip tray is useful if the temperature temporarily falls below the dew point
- Heat exchanger as 2-pipe or 4-pipe system
- Water connections at the narrow side,
- Ø12 mm Cu pipe, with plain tails or with G½" external thread, or with a G½" union nut; with flat seal
- Adjustable air control blades for air direction control
- Internal nozzle plate with punched nozzles (non-combustible)

ISO

Standards and guidelines

- Products are certified by Eurovent (no. 09.12.432) and listed on the Eurovent website
- Declaration of hygiene conformity to VDI 6022

Technical data

Nominal length	600, 1200 mm	
Length	593, 598, 618, 623 mm (one tile), or 1193, 1198, 1243, 1248 mm (two tiles)	
Height	230 mm	
Width	593, 598, 618, 623 mm	
Primary air spigot, diameter	123 mm	
Primary air volume flow rate	6 - 50 l/s or 22 - 180 m³/h	
Cooling capacity	Up to 1330 W	
Heating capacity	Up to 1250 W	
Max. operating pressure, water side	6 bar	
Max. operating temperature	75 °C

Features

Active chilled beam for heating and cooling, with 2-pipe or 4-pipe heat exchanger, for integration with various ceiling systems.

- Preferably for room heights up to 4.00 m
- High heating and cooling capacity with a low conditioned primary air volume flow rate and low sound power level
- High comfort levels due to low airflow velocity in the occupied zone
- Five nozzle variants to optimise induction based on demand, including adjustable twin nozzles, i.e. one pair of nozzles with different diameters
- Removable induced air grille, fixed with magnets, with decreasing apertures towards the edges

Optional equipment and accessories

- Control system
- Adjustable air control blades for air direction

control

- Powder coating in many different colours, e.g. RAL CLASSIC
- With an extended border also suitable for freely suspended installation

for heating and cooling

- DA: Adjustable twin nozzles, all nozzles are open (factory setting)
- DS: Adjustable twin nozzles, smaller nozzles are open
- DB: Adjustable twin nozzles, large nozzles are open. DS and DB can be set according to local requirements. You should order DA and have DS or DB set by others.

**Construction**

- ▶ Powder-coated RAL 9010, pure white, gloss level 50 %
- ▶ P1: Powder-coated in any other RAL colour, gloss level 70 %
- ▶ P1: Powder-coated RAL 9006, white aluminium, gloss level 30 %

- ▶ HV: Heating valve with actuator

Each valve with kVS value 0.25, 0.40, 0.63 or 1.0

Water connection

- ▶ R: Lockshield (2-pipe system: 1; 4-pipe system: 2), kVS value 1.32

4-pipe system

- ▶ Induced air grille with parallel drilled apertures, decreasing towards the edges
- ▶ Optional twin nozzles, adjustable, for a large volume flow rate range
- ▶ Water connection, Ø12 mm Cu pipe or coupling with G1/2" external thread and flat seal or G1/2" union nut and flat seal
- ▶ Internal nozzle plate with punched nozzles (non-combustible)
- ▶ Adjustable air control blades for air direction control as an option

**Attachments**

- ▶ Adjustable air control blades
- ▶ Water connection A1: G1/2" external thread and flat seal
- ▶ Water connection A2: G1/2" union nut and flat seal

**Useful additions**

- ▶ Connecting hoses
- ▶ Control equipment consisting of a control panel including a controller with integral room temperature sensor; valves and valve actuators; and lockshields
- ▶ X-AIRCONTROL control system

**Accessories**

Control components

- ▶ KV: Cooling valve with actuator

**Special characteristics**

- ▶ Four-way air discharge
- ▶ Horizontal heat exchanger as 2-pipe or

**Technical data**

Nominal length	600, 1200 mm
Length	593, 598, 618, 623 mm (one tile), or 1193, 1198, 1243, 1248 mm (two tiles)
Height	230/245 mm
Width	593, 598, 618, 623 mm
Primary air spigot, diameter	123/158 mm
Primary air volume flow rate	14 - 87 l/s or 50 - 310 m ³ /h
Cooling capacity	Up to 2170 W
Heating capacity	Up to 2990 W
Max. operating pressure, water side	6 bar
Max. operating temperature	75 °C

Features

Active chilled beam for heating and cooling, with 2-pipe or 4-pipe heat exchanger, for integration with various ceiling systems. The condensate drip tray is useful if the temperature temporarily falls below the dew point.

- ▶ Preferably for room heights up to 4.00 m
- ▶ High heating and cooling capacity with a low conditioned primary air volume flow rate and low sound power level
- ▶ High comfort levels due to low airflow velocity in the occupied zone
- ▶ Three nozzle variants to optimise induction based on demand
- ▶ Circular or square diffuser face

Optional equipment and accessories

- ▶ Control system
- ▶ Casing coated black
- ▶ Heat exchanger powder-coated black
- ▶ Powder coating in many different colours, e.g. RAL CLASSIC

- ▶ Active chilled diffuser with radial air discharge

- ▶ 2-pipe or 4-pipe heat exchangers enable good comfort levels with a low conditioned primary air volume flow rate

- ▶ Energy-efficient solution since water is used for heating and cooling

Variants

- ▶ DID-R: Circular construction, Ø598 mm
- ▶ DID-R-Q: With square diffuser face (593, 618, 598, or 623 mm)

Heat exchanger

- ▶ 2: 2-pipe systems
- ▶ 4: 4-pipe systems

Plastic nozzle variants

- ▶ A: Small
- ▶ B: Medium
- ▶ C: Large

Useful additions

- ▶ Connecting hoses
- ▶ Control equipment consisting of a control panel including a controller with integral room temperature sensor; valves and valve actuators; and lockshields
- ▶ X-AIRCONTROL control system

Special characteristics

- ▶ Radial air discharge
- ▶ Vertical heat exchanger as 2-pipe or 4-pipe system, with condensate drip tray that is useful if the temperature temporarily falls below the dew point
- ▶ Water connections at the side, Ø10 mm Cu pipe with plain tails

Standards and guidelines

- ▶ Products are certified by Eurovent (no. 09.12.432) and listed on the Eurovent website
- ▶ Declaration of hygiene conformity to VDI 6022

Application

- ▶ Active chilled diffusers of Type DID-R for the integration into various ceiling systems, preferably for room heights up to 4.00 m
- ▶ Particularly suitable for continuous ceilings and for grid ceilings with grid size 600 or 625

Construction

- ▶ Powder-coated RAL 9010, pure white, gloss level 50 %
- ▶ P1: Powder-coated in any other RAL colour, gloss level 70 %
- ▶ P1: Powder-coated RAL 9006, white aluminium, gloss level 30 %

Features

Active chilled beam for heating and cooling, with 2-pipe or 4-pipe heat exchanger, for installation into bulkheads, e.g. in hotel rooms

- ▶ Preferably for room heights up to 4.00 m
- ▶ High heating and cooling capacity with a low conditioned primary air volume flow rate and low sound power level
- ▶ High comfort levels due to low airflow velocity in the occupied zone
- ▶ Three nozzle variants to optimise induction based on demand
- ▶ Fixing points for various types of suspension

Optional equipment and accessories

- ▶ Control system
- ▶ Induced air spigot and supply air spigot (to facilitate attaching the grilles)
- ▶ Heat exchanger powder-coated black
- ▶ Powder coating in many different colours, e.g. RAL CLASSIC

good comfort levels with a low conditioned primary air volume flow rate

- ▶ Energy-efficient solution since water is used for heating and cooling

Variants

- ▶ Heat exchanger width is 256 or 320 mm

Heat exchanger

- ▶ 2: 2-pipe systems
- ▶ 4: 4-pipe systems

Nozzle variants

- ▶ G: Large
- ▶ U: Extra large
- ▶ 2U: Two nozzle rows, extra large nozzles

Attachments

- ▶ Water connection A1: G½" external thread and flat seal
- ▶ Water connection A2: G½" union nut and flat seal

Useful additions

- ▶ Connecting hoses
- ▶ Control equipment consisting of a control panel including a controller with integral room temperature sensor; valves and valve actuators; and lockshields
- ▶ Ventilation grille
- ▶ X-AIRCONTROL control system

Special characteristics

- ▶ Choice of any induced air grille and supply air grille from our portfolio
- ▶ One-way air discharge
- ▶ Horizontal heat exchanger as 2-pipe or 4-pipe system
- ▶ Internal nozzle plate with punched nozzles (non-combustible)
- ▶ Water connections at the narrow side, Ø12 mm Cu pipe, with plain tails or with G½" external thread, or with a G½" union nut; with flat seal

Standards and guidelines

- ▶ Products are certified by Eurovent (no. 09.12.432) and listed on the Eurovent website
- ▶ Declaration of hygiene conformity to VDI 6022

Application

- ▶ Active chilled beams of Type DID-E for installation into ceiling bulkheads, preferably for room heights up to 4.00 m
- ▶ Particularly suitable for hotel bedrooms and rooms on hospital wards
- ▶ 2-pipe or 4-pipe heat exchangers enable

Accessories

- ▶ IS: Induced air spigot
- ▶ AS: Supply air spigot
- ▶ IA: Induced and supply air spigots

Technical data

Features

Active chilled beam for heating and cooling, with 2-pipe or 4-pipe heat exchanger, for freely suspended installation; additional functions or services (e.g. lighting, loudspeakers, sprinklers, smoke detectors, or PIR sensors) can be integrated

- ▶ Preferably for room heights up to 4.00 m
- ▶ High heating and cooling capacity with a low conditioned primary air volume flow rate and low sound power level
- ▶ High comfort levels as a result of low airflow velocities in the occupied zone
- ▶ Unit consists of three parts: wall end, active section, and front end
- ▶ Four nozzle variants to optimise induction based on demand

Optional equipment and accessories

- ▶ Control system
- ▶ 3 different front ends
- ▶ Various services, e.g. lighting, sprinklers, smoke detectors, PIR sensors, and loudspeakers
- ▶ Powder coating in many different colours, e.g. RAL CLASSIC

Application

- ▶ Active chilled beams of Type DID-SB (SMART BEAM) for freely suspended installation, preferably for room heights up to 4.00 m
- ▶ Project-specific integration of functions or services such as lighting, loudspeakers, sprinklers, smoke detectors, or PIR sensors
- ▶ Integral strip light fittings use innovative microp prism optics to provide uniform illumination of rooms
- ▶ Each section can be individually designed
- ▶ 2-pipe or 4-pipe heat exchangers enable good comfort levels with a low conditioned primary air volume flow rate
- ▶ Energy-efficient solution since water is used for heating and cooling

Nozzle variants

- ▶ K: Small
- ▶ Z: Small plus
- ▶ M: Medium
- ▶ G: Large

Front end

- ▶ Circular
- ▶ Straight
- ▶ Slanted

Construction

- ▶ Powder-coated RAL 9010, pure white, gloss level 50 %
- ▶ P1: Powder-coated in any other RAL colour, gloss level 70 %
- ▶ P1: Powder-coated RAL 9006, white aluminium, gloss level 30 %

Attachments

- ▶ Water connection A1: G½" external thread and flat seal
- ▶ Water connection A2: G½" union nut and flat seal

& Accessories

- ▶ Sprinkler
- ▶ Smoke detector
- ▶ PIR sensor
- ▶ Loudspeaker
- ▶ Indirect and/or direct lighting
- ▶ Volume flow controller

Useful additions

- ▶ Connecting hoses
- ▶ Control equipment consisting of a control panel including a controller with integral room temperature sensor; valves and valve actuators; and lockshields (no lighting control)
- ▶ X-AIRCONTROL control system

Special characteristics

- ▶ Freely suspended active chilled beam with choice of different face plate perforations
- ▶ Heat exchanger as 2-pipe or 4-pipe system
- ▶ Wide range of additional services such as lighting, sprinklers, loudspeakers and sensors (accessories)
- ▶ Water connections at the narrow side, Ø12 mm Cu pipe, with plain tails or with G½" external thread, or with a G½" union nut; with flat seal

Wall end

- ▶ Cover for air and water connections at the end facing the wall
- ▶ Connection of project-specific services

Active section

- ▶ Air discharge and heat exchanger
- ▶ Integration of different functions, e.g. acoustic fleece, lighting or sensors

Front end

- ▶ Available in three designs
- ▶ Integration of project-specific functions, e.g. loudspeakers

Standards and guidelines

- ▶ Products are certified by Eurovent (no. 09.12.432) and listed on the Eurovent website
- ▶ Declaration of hygiene conformity to VDI 6022

 **Features**

Induction unit for heating and cooling, with 2-pipe heat exchanger, for freely suspended installation in large internal spaces, e.g. exhibition or production halls. The condensate drip tray is useful if the temperature temporarily falls below the dew point.

- ▶ Very high heating capacity and cooling capacity (up to 27 kW) when installed at a height of 8 to 25 m
- ▶ High comfort levels due to low airflow velocity in the occupied zone
- ▶ Non-combustible nozzles made of aluminium
- ▶ Motorised damper blade allows for precise setting of air discharge direction
- ▶ Heat exchanger with plain Cu pipe (Ø22 mm) for the water connection

Optional equipment and accessories

- ▶ Control system
- ▶ One-way or two-way air discharge
- ▶ Powder coating in many different colours, e.g. RAL CLASSIC

 **Application**

- ▶ Induction units of Type IDH for freely suspended installation, preferably for very large internal spaces with a height of 8 to 25 m

- ▶ Dissipation of very high heating and cooling loads (up to 27 kW) due to the 2-pipe heat exchanger and motorised damper blades that allow for setting the airflow direction precisely
- ▶ Energy-efficient solution since water is used for heating and cooling

 **Variants**

- ▶ IDH-1: Induction unit with a primary air volume flow rate of 280 l/s or 1000 m³/h; cooling load up to about 13.5 kW, heating load up to about 8.5 kW
- ▶ IDH-2: Induction unit with a primary air volume flow rate of 555 l/s or 2000 m³/h; cooling load up to about 27 kW, heating load up to about 17 kW

 **Construction**

- ▶ Galvanised
- ▶ Powder-coated RAL 9010, pure white, gloss level 50 %
- ▶ P1: Powder-coated in any other RAL colour, gloss level 70 %

 **Attachments**

- ▶ E1: Electric actuator (3-point) 230 V AC
- ▶ E2: Electric actuator (3-point) 24 V AC
- ▶ E3: Electric actuator (modulating) 24 V AC, 0 - 10 V DC

 **Special characteristics**

- ▶ Active induction unit for high volume flow rates and with high thermal output, ideal for industrial applications
- ▶ One-way or two-way air discharge
- ▶ 1 or 2 electric actuators allow for the precise control of the discharge direction and of the airflow in the occupied zone; in cooling mode, air is supplied to the occupied zone either horizontally or downwards at an angle; in heating mode, the air is supplied vertically to the occupied zone
- ▶ Vertical heat exchanger with condensate drip tray including condensate drain that can be connected to a condensate pipe (to be provided by others), Ø12 mm both sides
- ▶ Water connections at the narrow side, Ø22 mm Cu pipe, with plain tails

 **Standards and guidelines**

- ▶ Products are certified by Eurovent (no. 09.12.432) and listed on the Eurovent website
- ▶ Declaration of hygiene conformity to VDI 6022

WB Wall and floor fixing

Surface of casing and heat exchanger

No entry: untreated
G1 Casing powder-coated, heat exchanger coated RAL 9005, jet black
G2 Heat exchanger coated RAL 9005, jet black

Features

Induction-type displacement flow diffuser with 2-pipe or 4-pipe heat exchanger, for installation under a sill. The condensate drip tray is useful if the temperature temporarily falls below the dew point.

- High heating and cooling capacity with a low conditioned primary air volume flow rate and low sound power level
- High comfort levels due to low airflow velocity in the occupied zone
- Three nozzle variants to optimise induction based on demand
- Two different heat exchanger positions

Optional equipment and accessories

- Control equipment
- Fixing systems for wall or floor fixing, fixing systems for both wall and floor fixing
- Powder coating in many different colours, e.g. RAL CLASSIC

Application

- Induction-type displacement flow diffusers of Type QLI for installation under a sill
- High comfort levels due to low-turbulence airflow and low airflow velocity in the occupied zone
- Displacement flow
- Choice of location for primary air spigot at a narrow side; end cap may have to be changed accordingly

- 2-pipe or 4-pipe heat exchangers enable good comfort levels with a low conditioned primary air volume flow rate
- Energy-efficient solution since water is used for heating and cooling

Variants

- **WVL:** Heat exchanger at the front, water connections on the left
- **WVR:** Heat exchanger at the front, water connections on the right
- **WHL:** Heat exchanger at the rear, water connections on the left
- **WHR:** Heat exchanger at the rear, water connections on the right

Heat exchanger

- **2:** 2-pipe systems
- **4:** 4-pipe systems

Nozzle variants

- **M:** Medium
- **G:** Large
- **U:** Extra large

Construction

- Galvanised
- **P1:** Powder-coated RAL 9005, black, gloss level 70 %

Attachments

- Water connection A1: G $\frac{1}{2}$ " external thread and flat seal
- Water connection A2: G $\frac{1}{2}$ " union nut and flat seal
- Condensate drip tray

Accessories

- **W0:** Wall fixing
- **B0:** Floor fixing
- **WB:** Wall and floor fixing

Useful additions

- Connecting hoses
- Control equipment consisting of a control panel including a controller with integral room temperature sensor; valves and valve actuators; and lockshields
- X-AIRCONTROL control system
- Choice of ventilation grille from our portfolio

Special characteristics

- Low-turbulence supply air discharge as displacement flow
- Vertical heat exchanger as 2-pipe or 4-pipe system, optional condensate drip tray including condensate drain that can be connected to a condensate pipe (to be provided by others)

- Water connections at the narrow side, Ø12 mm Cu pipe, either with plain tails or with external thread or union nut, G½", flat seal

Standards and guidelines

- Products are certified by Eurovent (no. 09.12.432) and listed on the Eurovent website

- Declaration of hygiene conformity to VDI 6022

Features

Under sill induction unit with 2-pipe or 4-pipe heat exchanger, of compact height, for installation under a sill or on a wall. The condensate drip tray is useful if the temperature temporarily falls below the dew point.

- ▶ High heating and cooling capacity with a low conditioned primary air volume flow rate and low sound power level
- ▶ High comfort levels due to low airflow velocity in the occupied zone
- ▶ Four nozzle variants to optimise induction based on demand

Optional equipment and accessories

- ▶ Control equipment
- ▶ Lint screen to protect the heat exchanger from contamination
- ▶ Powder coating in many different colours, e.g. RAL CLASSIC

Application

- ▶ Type IDB under sill induction units of compact height, for installation on an external wall, e.g. under a sill.
- ▶ Inducing displacement flow
- ▶ 2-pipe or 4-pipe heat exchangers enable good comfort levels with a low conditioned primary air volume flow rate
- ▶ Energy-efficient solution since water is used

for heating and cooling

Variants

Heat exchanger

- ▶ 2: 2-pipe systems
- ▶ 4: 4-pipe systems

Nozzle variants

- ▶ M: Medium
- ▶ G: Large
- ▶ U: Extra large
- ▶ 2U: Two nozzle rows, extra large nozzles

Construction

- ▶ Galvanised
- ▶ P1: Powder-coated RAL 9005, black, gloss level 70 %

Attachments

- ▶ Water connection A1: G $\frac{1}{2}$ " external thread and flat seal
- ▶ Water connection A2: G $\frac{1}{2}$ " union nut and flat seal
- ▶ Condensate drip tray
- ▶ Lint screen

Accessories

- ▶ Wall and floor fixing

Useful additions

- ▶ Connecting hoses
- ▶ Control equipment consisting of a control panel including a controller with integral room temperature sensor; valves and valve actuators; and lockshields
- ▶ X-AIRCONTROL control system

Special characteristics

- ▶ Supply air discharge as inducing displacement flow
- ▶ Vertical heat exchanger as 2-pipe or 4-pipe system, optional condensate drip tray including condensate drain that can be connected to a condensate pipe (to be provided by others)
- ▶ Water connections at the narrow side, Ø12 mm Cu pipe, with plain tails or with G $\frac{1}{2}$ " external thread, or with a G $\frac{1}{2}$ " union nut; with flat seal

Standards and guidelines

- ▶ Products are certified by Eurovent (no. 09.12.432) and listed on the Eurovent website
- ▶ Declaration of hygiene conformity to VDI 6022

Technical data

Nominal length	600, 900, 1200 mm
Length	643, 943, 1243 mm
Height	Min. 555 mm, max. 605 mm
Width	155 mm
Primary air volume flow rate	4 - 40 l/s or 14 - 144 m ³ /h
Cooling capacity	Up to 950 W
Heating capacity	Up to 470 W
Max. operating pressure, water side	6 bar
Max. operating temperature, water side	75 °C

Features

Underfloor induction unit with 2-pipe or 4-pipe heat exchanger for installation in raised floors

- High heating and cooling capacity with a low conditioned primary air volume flow rate and low sound power level
- High comfort levels due to low airflow velocity in the occupied zone
- Four nozzle variants to optimise induction based on demand
- Levelling feet
- Continuous linear arrangement if required

Optional equipment and accessories

- Control equipment
- Choice of walk-on floor grille from our portfolio
- Heat exchanger powder-coated black
- Powder coating in many different colours, e.g. RAL CLASSIC

- Energy-efficient solution since water is used for heating and cooling

Variants

- E: Single unit
- B: Unit for continuous linear arrangement, i.e. open at the narrow sides

Heat exchanger

- 2: 2-pipe systems
- 4: 4-pipe systems

Nozzle variants

- M: Medium
- G: Large
- U: Extra large
- 2U: Two nozzle rows, extra large nozzles

Construction

- Galvanised
- P1: Powder-coated RAL 9005, black, or in any other RAL colour, gloss level 70 %

Useful additions

- Connecting hoses
- Control equipment consisting of a control panel including a controller with integral room temperature sensor; valves and valve actuators; and lockshields
- Choice of floor grille from our portfolio
- X-AIRCONTROL control system

Special characteristics

- Supply air discharge as inducing displacement flow
- Horizontal heat exchanger as 2-pipe or 4-pipe system
- 4 levelling feet
- Water connections at the narrow side, Ø12 mm Cu pipe, with plain tails or with G½" external thread, or with a G½" union nut; with flat seal

Standards and guidelines

- Products are certified by Eurovent (no. 09.12.432) and listed on the Eurovent website
- Declaration of hygiene conformity to VDI 6022

Application

- Underfloor induction units of Type BID for installation in raised floors
- Under floor induction units allow for floor-to-ceiling glazing
- 2-pipe or 4-pipe heat exchangers enable good comfort levels with a low conditioned primary air volume flow rate

Attachments

- Water connection A1: G½" external thread and flat seal
- Water connection A2: G½" union nut and flat seal

Features

Passive chilled beam with 2-pipe heat exchanger for ceiling installation, either freely suspended or above an open cell ceiling

- ▶ For room heights from 2.60 m
- ▶ Comfortable room cooling
- ▶ Water connection from the side or from the top
- ▶ 3 standard widths and heights for optimum dissipation of heat loads

Optional equipment and accessories

- ▶ Control equipment
- ▶ Aluminium frame with perforated metal facing
- ▶ Heat exchanger powder-coated black
- ▶ Powder coating in many different colours, e.g. RAL CLASSIC

Variants

- ▶ PKV-0: Casing and heat exchanger
- ▶ PKV-L: Including perforated metal facing
- ▶ PKV-R-L: Including frame and perforated metal facing

Construction

- ▶ PKV-0 (without frame): Powder-coated RAL 9005, black, gloss level 70 %
- ▶ PKV-L (with perforated metal facing): Powder-coated RAL 9010, pure white, gloss level 50 %
- ▶ PKV-R-L (with frame and perforated metal facing): Powder-coated RAL 9010, pure white, gloss level 50 %
- ▶ P1: Powder-coated in any other RAL colour, gloss level 70 %
- ▶ G3: Heat exchanger, powder-coated RAL 9005, black, gloss level 70 %

Useful additions

- ▶ Connecting hoses
- ▶ Control equipment consisting of control panel including a controller with integral room temperature sensor; valve and valve actuator; and lockshield
- ▶ X-AIRCONTROL control system

Special characteristics

- ▶ Air-water component for the dissipation of heat loads
- ▶ Horizontal heat exchanger as 2-pipe system
- ▶ Aesthetic frame and perforated metal facing for freely suspended installation in comfort zones
- ▶ Water connections at the narrow side, Ø12 mm Cu pipe, with plain tails, either straight or 90° bent upwards

Standards and guidelines

- ▶ Products are certified by Eurovent (no. 09.12.432) and listed on the Eurovent website
- ▶ Declaration of hygiene conformity to VDI 6022

Application

- ▶ Passive chilled beam of Type PKV for ceiling installation, either freely suspended or above an open cell ceiling, suitable for room heights from 2.60 m
- ▶ Passive chilled beam (no supply air) for new buildings and refurbishment projects
- ▶ Dissipation of high heat loads using a 2-pipe heat exchanger
- ▶ Energy-efficient solution since water is used for cooling

Attachments

- ▶ Frame
- ▶ Perforated metal facing

Stand-alone single room control equipment to control the water-side components in air-water systems

Order code

RB – UP – T / V

1 2 3 4

① Accessories (supplied separately)

RB Control panel

② Variant

AP Surface mounted
UP Flush mounted

③ Timer

T No entry: none
With

④ Amplifier (supplied separately)

No entry: none
V With (required if a control panel is used for the control of more than four induction units)

Features

Compact, easy-to-operate control panel, used with air-water systems (2-pipe or 4-pipe systems) and the connected valves and actuators to control the room temperature
 ▶ Control panel for surface mounting or flush mounting, including control unit and room temperature sensor
 ▶ Self-explanatory push buttons
 ▶ Backlit LC display
 ▶ Temperature is displayed in °C or °F
 ▶ 2-point or 3-point outputs
 ▶ Valve with valve actuator, normally closed
 ▶ Control valves with G½" external thread and flat seal
 ▶ 230 V AC supply voltage

Optional equipment and accessories

- ▶ 7-day timer
- ▶ KNX or Modbus interface to the central BMS
- ▶ Amplifier, required if a control panel is used for the control of more than four induction units in a heating or cooling circuit

Application

- ▶ Room control panel to be used in combination with air-water systems, e.g. induction units
- ▶ Control of the water circuits for heating and/or cooling a room
- ▶ Controller for surface mounting or flush mounting with optional timer as a bespoke solution for project-specific installation situations

Components

- ▶ RDG100 - Surface mounted controller without timer
- ▶ RDG100T - Surface mounted controller with timer
- ▶ RDF600 - Flush mounted controller without timer
- ▶ RDF600T - Flush mounted controller with timer
- ▶ VVP47.10-x.xx - straight-way valve (KVS 0.25; 0.4; 0.63 or 1.0)
- ▶ Electro-thermal actuator, including valve adapter for straight-way valve VVP 47.10-x.xx
- ▶ Lockshield

Construction

- ▶ Casing in RAL 9003, signal white

Accessories

- ▶ Amplifier (required if a control panel is used for the control of more than four induction units)

Special characteristics

- ▶ Control panels for surface mounting or flush mounting
- ▶ Optional timer
- ▶ Valve with valve actuator, normally closed
- ▶ Valves with G½" external thread and flat seal
- ▶ Valves can be used for up to PN 16
- ▶ Connecting cable for valve actuator is available in various lengths (1.0 m as standard)
- ▶ Valve actuator with bayonet fixing

Technical data

Operating voltage	230 V AC (+10/-15%)
Frequency	50/60 Hz
Power consumption	Max. 18 VA (RDG 100), max. 8 VA (RDF 600)
Control outputs	230 V AC, 1 A max.

 **Features**

Plastic hose with oxygen diffusion barrier, stainless steel overbraid, available with various end pieces to fit different requirements

- ▶ Can be used for water or water glycol mixtures (up to 30% glycol)
- ▶ Detachable push-fit couplings are supplied with a red O-ring seal
- ▶ Various G $\frac{1}{2}$ " or G $\frac{3}{4}$ " threads
- ▶ Connecting piece either straight or 90°
- ▶ Nominal length: 500, 750, 1000 mm
- ▶ Other lengths upon request

Optional equipment and accessories

- ▶ Push-fit coupling for Ø12 mm Cu pipe, either straight or 90°
- ▶ Connecting piece with G $\frac{1}{2}$ " external thread and flat seal, either straight or 90°
- ▶ Connecting piece with G $\frac{1}{2}$ " union nut and flat seal, either straight or 90°

 **Application**

- ▶ Flexible water-side connection between the pipework (heating and/or cooling) and the heat exchangers of air-water systems
- ▶ With connecting hoses it is possible to remove or swivel out heat exchangers for cleaning and maintenance without having to empty the system
- ▶ Connecting hoses are suitable for all air-water systems, chilled ceilings, chilled beams, induction units and façade ventilation units

 **Construction**

- ▶ The various couplers can be combined as needed
- ▶ Ø10 mm push-fit couplings are available for DN 10 hoses only

 **Special characteristics**

- ▶ With oxygen diffusion barrier
- ▶ Various push-fit and screw-on connecting pieces

 **Standards and guidelines**

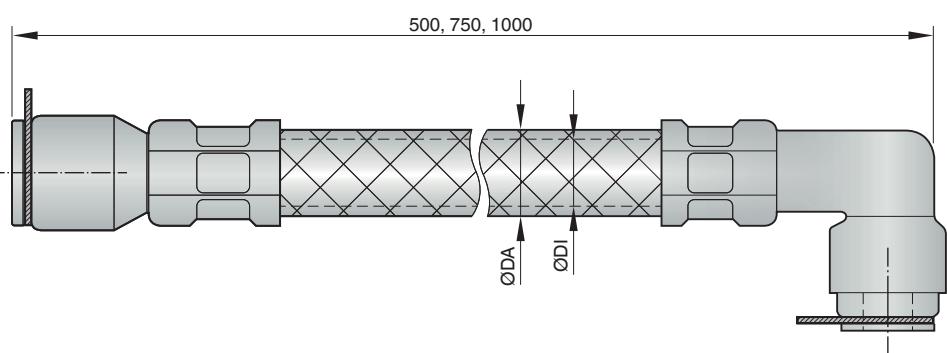

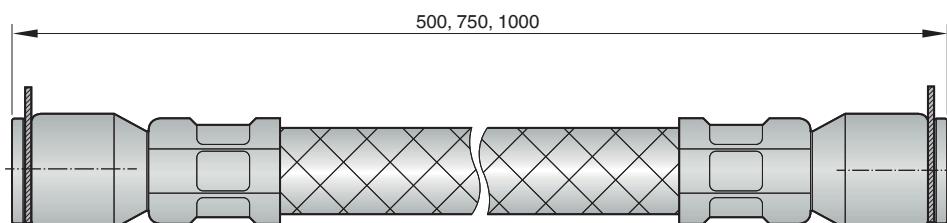

- ▶ With oxygen diffusion barrier to DIN 4726

 **Technical data**

List of abbreviations

L_{WA} [dB(A)]	A-weighted sound power level of air-regenerated noise
\dot{V} [m^3/h] and [l/s]	Volume flow rate
Δt_z [K]	Supply air to room air temperature difference, i.e. supply air temperature minus room temperature
Δp_t [Pa]	Total differential pressure
A_{eff} [m^2]	Effective air discharge area
$\emptyset D$ [mm]	Outer diameter of the spigot
$\emptyset D_1$ [mm]	Outer diameter of a circular diffuser face
$\emptyset D_2$ [mm]	Diameter of a circular diffuser face style
$\emptyset D_3$ [mm]	Diameter of a circular plenum box
Q_1 [mm]	Outer diameter of a square diffuser face
Q_2 [mm]	Dimensions of a square diffuser face style
Q_3 [mm]	Dimensions of a square plenum box
H_1 [mm]	Distance (height) from the lower edge of the suspended ceiling to the lower edge of the diffuser face
H_2 [mm]	Height of a ceiling diffuser, from the lower edge of the suspended ceiling to the upper edge of the spigot
H_3 [mm]	Height of a ceiling diffuser with plenum box, from the lower edge of the suspended ceiling to the upper edge of the plenum box or of the spigot
A [mm]	Position of the spigot, defined by the distance of the spigot centre line to the lower edge of the suspended ceiling
C [mm]	Length of the spigot
m [kg]	Weight

All sound power levels are based on 1 pW.

Supply and extract air unit with heat exchanger and heat recovery, secondary air option, for installation under the sill

Features

Ready-to-operate decentralised ventilation unit that provides good comfort levels, used for the ventilation and extract ventilation of rooms such as classrooms in schools

- Acoustically optimised EC fans with low specific fan powers, SFP-1 according to EN 13779
- Plate heat exchanger for heat recovery (air/air), including bypass with electric actuator
- Highly efficient heat exchanger for heating and cooling as 2-pipe or 4-pipe system
- Heat recovery all year round
- Reduction of fine dust and pollen contamination due to integral filters that conform to VDI 6022 - F7 fresh air filter and G3 extract air filter
- Easy filter change, no tools required
- Condensate drip tray with condensate drain
- Motorised shut-off dampers, normally closed (NC)
- Installation without interruption to the operations of the respective school

Optional equipment and accessories

- Modular control system FSL-CONTROL II, specially for decentralised ventilation systems
- Demand-based fresh air volume, free cooling and night purge, depending on control strategy
- Various fixing systems to fix the unit to the floor or wall
- Variable heat recovery
- Powder-coated RAL 9005 (black)

schools, playrooms in daycare facilities, meeting rooms and offices with a high air change rate

Variants

- SCHOOLAIR-B - volume flow rates: 150, 200, 250 and 320 m³/h, with cross flow plate heat exchanger for heat recovery
- SCHOOLAIR-B-HE - volume flow rates: 200, 250, 300 and 400 m³/h, with cross counter flow plate heat exchanger for heat recovery

Construction

- Powder-coated RAL 9005, black

Accessories

- Outer casing made of wood, with integral supply air and extract air grilles

Useful additions

- Modular control system FSL-CONTROL II, specially for decentralised ventilation systems
- Connecting hoses

Special characteristics

- Decentralised ventilation unit for high volume flow rates
- Motorised shut-off dampers for fresh air and exhaust air, normally closed (NC) in order to prevent uncontrolled airflows and the carry

over of smoke

- Demand-based ventilation and extract ventilation is possible by means of monitoring the room air quality and with dedicated control equipment
- For demand-based ventilation
- Recuperative heat recovery with motorised variable bypass all year round
- Heat exchanger as 2-pipe or 4-pipe system, with G1½" union nuts and flat seals
- Meets the hygiene requirements of VDI 6022
- Filter class: F7 for fresh air, G3 for extract air
- Easy filter change with quick release

fasteners, no tools required

- Condensate drip tray with condensate drain
- Compact construction, hence particularly suitable for refurbishment projects

ISO

Standards and guidelines

- Façade ventilation units of Type SCHOOLAIR-B conform to VDI 6035 and VDMA 24390
- Hygiene certificate to VDI 6022
- Heating/cooling fluid conforms to VDI 2035
- Meets the requirements of EU directive 1253/2014 (ErP).

Features

Ready-to-operate decentralised ventilation unit that provides good comfort levels, used for the ventilation and extract ventilation of rooms

- ▶ Acoustically optimised EC fans with low specific fan powers, SFP-1 according to EN 13779
- ▶ Plate heat exchanger for heat recovery (air/air), including bypass damper with electric actuator (open-close)
- ▶ Heat exchanger for heating and cooling as 2-pipe or 4-pipe system
- ▶ Reduction of fine dust and pollen contamination due to integral filters that conform to VDI 6022 - F7 fresh air filter and G3 extract air filter
- ▶ Inspection panel simplifies filter change and cleaning of the heat exchanger
- ▶ Condensate drip tray with condensate drain
- ▶ Motorised shut-off dampers, normally closed (NC)
- ▶ Automatic switching to secondary air mode (based on air quality)

Optional equipment and accessories

- ▶ Modular control system FSL-CONTROL II, specially for decentralised ventilation systems
- ▶ Demand-based fresh air volume, free cooling and night purge, depending on control strategy
- ▶ Various fixing systems to fix the unit to the floor or wall
- ▶ Variable heat recovery
- ▶ Powder-coated RAL 9005

Construction

- ▶ Powder-coated RAL 9005, black

Useful additions

- ▶ Modular control system FSL-CONTROL II, specially for decentralised ventilation systems
- ▶ Connecting hoses

Special characteristics

- ▶ Recuperative heat exchanger for heat recovery, including bypass damper with variable electric actuator (open-close)
- ▶ Mechanical self-powered volume flow controller for limiting the fresh air flow rate
- ▶ Heat exchanger as 2-pipe or 4-pipe system, with G $\frac{1}{2}$ " union nuts and flat seals
- ▶ Meets the hygiene requirements of VDI 6022
- ▶ Filter class: F7 for fresh air, G3 for extract air
- ▶ Easy filter change with quick release fasteners, no tools required; easy access to the heat exchanger for cleaning

- Condensate drip tray with condensate drain
- Compact construction, hence particularly suitable for refurbishment projects
- Demand-based ventilation is possible by means of monitoring the room air quality and with dedicated control equipment
- 4 levelling feet
- Motorised shut-off dampers for fresh air and exhaust air, normally closed (NC) in order to prevent uncontrolled airflows and the carry over of smoke

- Automatic switching to secondary air mode (only with an air quality sensor) if the room air quality (measured with the integral VOC sensor, for example) is between the previously defined range. The fresh air damper closes, the self-powered secondary air damper opens and the extract air fan is switched off. The unit always starts in secondary air mode, which is more energy efficient.

ISO Standards and guidelines

- Facade ventilation units of Type FSL-B-ZAB/SEK conform to VDI 6035 and VDMA 24390
- Hygiene certificate to VDI 6022
- Heating/cooling fluid conforms to VDI 2035
- Meets the requirements of EU directive 1253/2014 (ErP).
- Energy efficiency class A

Features

Ready-to-operate decentralised ventilation unit that provides good comfort levels, used for the ventilation and extract ventilation of rooms such as classrooms in schools

- ▶ Acoustically optimised EC fans with low specific fan powers, SFP-1 according to EN 13779
- ▶ Plate heat exchanger for heat recovery (air/air), including bypass damper with electric actuator (open-close)
- ▶ Alternatively: Rotary heat exchanger for heat recovery (air/air), including bypass with electric actuator (modulating or open-close)
- ▶ Heat exchanger for heating and cooling as 2-pipe or 4-pipe system
- ▶ Unit base of approx. 0.24 m²
- ▶ Easy filter change, no tools required
- ▶ Condensate drip tray with or without condensate drain
- ▶ Motorised shut-off dampers, normally

closed (NC)

- ▶ Automatic switching to secondary air mode (based on air quality)

Optional equipment and accessories

- ▶ Modular control system FSL-CONTROL II, specially for decentralised ventilation systems
- ▶ Demand-based fresh air volume, free cooling and night purge, depending on control strategy
- ▶ Variable heat recovery
- ▶ Powder-coated RAL 9005 (black)

- ▶ Energy-efficient solution since water is used for heating and cooling

- ▶ For new buildings, refurbishment projects and revitalisation projects
- ▶ Vertical installation on the façade system or an external wall
- ▶ Typical applications include classrooms in schools, playrooms in daycare facilities, meeting rooms and offices with a high air change rate

Variants

- ▶ SCHOOLAIR-V-2L - volume flow rates: 150, 200, 250, 320 m³/h with cross flow plate heat exchanger for heat recovery
- ▶ SCHOOLAIR-V-4L - volume flow rates: 150, 200, 250, 320 m³/h with cross flow plate heat exchanger for heat recovery
- ▶ SCHOOLAIR-V-1800 - volume flow rates: 150, 230, 280 and 350 m³/h, with cross flow

Application

- ▶ Ventilation and extract ventilation of rooms with a depth up to approx. 6 m
- ▶ 2-pipe or 4-pipe heat exchangers enable good comfort levels
- ▶ Inducing displacement flow

plate heat exchanger for heat recovery

- SCHOOLAIR-V-HE - volume flow rates: 150, 200, 240, 360 m³/h with cross flow plate heat exchanger for heat recovery (or enthalpy as an alternative)
- SCHOOLAIR-V-HV - volume flow rates: 200, 300, 400, 500 m³/h with rotary heat exchanger for heat recovery

Construction

- Powder-coated RAL 9005, black

Accessories

- Outer casing made of wood, with integral supply air and extract air grilles

Useful additions

- Modular control system FSL-CONTROL II, specially for decentralised ventilation systems
- Connecting hoses

Technical data

Width	397 mm (2-pipe or 4-pipe), 600 mm (2-pipe or 4-pipe, 1800, HE and HV)

Depth	359 mm (2-pipe or 4-pipe, 1800 version) 408 mm (2-pipe or 4-pipe HE and HV versions)
Fresh air flow rate	Up to 500 m ³ /h
Supply air flow rate	Up to 500 m ³ /h
Cooling capacity	Up to 1685 W
Heating capacity	Up to 6020 W
Max. operating pressure, water side	6 bar
Max. operating temperature	75 °C
Sound power level	31 - 50 dB(A)
Supply voltage	230 V AC ±10 %, 50/60 Hz
Weight	From 80 kg

Special characteristics

- Decentralised ventilation unit for high volume flow rates
- Motorised shut-off dampers for fresh air and exhaust air, normally closed (NC) in order to prevent uncontrolled airflows
- Demand-based ventilation and extract ventilation is possible by means of monitoring the room air quality and with dedicated control equipment
- The type of heat exchanger for heat recovery depends on the unit variant: cross flow plate heat exchanger, cross counter flow plate heat exchanger including bypass damper with electric actuator (open-close or modulating) or rotary heat exchanger
- Heat exchanger as 2-pipe or 4-pipe system, with G½" union nuts and flat seals
- Meets the hygiene requirements of VDI 6022
- Filter class: F7 for fresh air, G3 for extract air
- Easy filter change with quick release fasteners, no tools required
- Condensate drip tray with or without

condensate drain

- Compact construction, hence particularly suitable for refurbishment projects
- Automatic switching to secondary air mode (only with an air quality sensor) if the room air quality (measured with the integral VOC sensor, for example) is between the previously defined range. The unit always starts in secondary air mode, which is more energy efficient.
- Depending on the unit, an enthalpy heat exchanger for heat recovery may be used

Standards and guidelines

- Façade ventilation units of Type SCHOOLAIR-V conform to VDI 6035 and VDMA 24390
- Hygiene certificate to VDI 6022
- Heating/cooling fluid conforms to VDI 2035
- Meets the requirements of EU directive 1253/2014 (ErP).

- ▶ Unit base of approx. 0.13 m²
- ▶ Reduction of fine dust and pollen contamination due to integral filters that conform to VDI 6022 - F7 fresh air filter and G3 extract air filter
- ▶ Condensate drip tray with condensate drain
- ▶ Motorised shut-off damper, normally closed (NC)
- ▶ Automatic switching to secondary air mode (based on air quality)

Optional equipment and accessories

- ▶ Modular control system FSL-CONTROL II, specially for decentralised ventilation

systems

- ▶ Demand-based fresh air volume, free cooling and night purge, depending on control strategy
- ▶ Variable heat recovery
- ▶ Powder-coated RAL 9005

Application

- ▶ Ventilation of rooms, preferably rooms with a depth up to 6 m
- ▶ 2-pipe or 4-pipe heat exchangers enable good comfort levels
- ▶ Inducing displacement flow
- ▶ Energy-efficient solution since water is used for heating and cooling
- ▶ For new buildings, refurbishment projects and revitalisation projects
- ▶ Vertical installation on the façade or on an external wall
- ▶ Typical installation locations include offices and meeting rooms

Construction

- ▶ Powder-coated RAL 9005, black

Useful additions

- ▶ Modular control system FSL-CONTROL II, specially for decentralised ventilation systems
- ▶ Connecting hoses

Special characteristics

- ▶ Motorised shut-off dampers for fresh, normally closed (NC) in order to prevent uncontrolled airflows
- ▶ Recuperative heat exchanger for recovery, including bypass damper with electric variable actuator
- ▶ Heat exchanger as 2-pipe or 4-pipe system, with G1/2" union nuts and flat seals
- ▶ Meets the hygiene requirements of VDI 6022
- ▶ Filter class: F7 for fresh air, G3 for extract air
- ▶ Easy filter change with quick release fasteners, no tools required
- ▶ Condensate drip tray with or without condensate drain
- ▶ Compact construction, hence particularly suitable for refurbishment projects

- Demand-based ventilation and extract ventilation is possible by means of monitoring the room air quality and with dedicated control equipment
- 4 levelling feet
- Automatic switching to secondary air mode (only with an air quality sensor) if the room air quality (measured with the integral VOC sensor, for example) is between the

previously defined range. The fresh air damper closes, the self-powered secondary air damper opens and the extract air fan is switched off. The unit always starts in secondary air mode, which is more energy efficient.

ISO

Standards and guidelines

- Façade ventilation units of Type FSL-V-ZAB/SEK conform to VDI 6035 and VDMA 24390
- Hygiene certificate to VDI 6022
- Heating/cooling fluid conforms to VDI 2035
- Energy efficiency class A

schools, playrooms in daycare facilities, smaller meeting rooms and offices with a high air change rate

Variants

► SCHOOLAIR-D - volume flow rates: 150, 200, 250 and 300 m³/h, with cross flow plate heat exchanger for heat recovery

Construction

► Powder-coated RAL 9005, black

Useful additions

► Modular control system FSL-CONTROL II, specially for decentralised ventilation systems
► Connecting hoses

Special characteristics

► Decentralised ventilation unit for high volume flow rates

Features

- Ready-to-operate decentralised ventilation unit that provides good comfort levels, used for the ventilation and extract ventilation of rooms such as classrooms in schools
- Acoustically optimised EC fans with low specific fan powers, SFP-1 according to EN 13779
- Plate heat exchanger for heat recovery (air/air), including bypass damper with electric actuator (open-close)
- Heat exchanger for heating and cooling as 2-pipe or 4-pipe system
- Reduction of fine dust and pollen contamination due to integral filters; F7 fresh air filter
- The condensate drip tray is useful if the temperature temporarily falls below the dew point
- Motorised shut-off dampers, normally closed (NC)
- Installation without interruption to the operations of the respective school
- Easy filter change, no tools required

Optional equipment and accessories

- Modular control system FSL-CONTROL II, specially for decentralised ventilation systems
- Demand-based fresh air volume, free cooling and night purge, depending on control strategy
- Automatic switching to secondary air mode (based on air quality)
- Variable heat recovery
- Powder-coated RAL 9005 (black, casing) or RAL 9010 (white, cover)

Application

- Ventilation and extract ventilation of rooms with a depth up to approx. 6 m
- 2-pipe or 4-pipe heat exchangers enable good comfort levels
- Supply air discharge from supply air slots
- Energy-efficient solution since water is used for heating and cooling
- For new buildings, refurbishment projects and revitalisation projects
- Installation below the ceiling slab and near an external wall
- Typical applications include classrooms in

- ▶ Air-water heat exchanger as 2-pipe or 4-pipe system, with G $\frac{1}{2}$ " union nuts and flat seals
- ▶ Cross flow heat exchanger for heat recovery, including bypass damper with electric actuator
- ▶ Motorised shut-off dampers for fresh air and exhaust air, normally closed (NC) in order to prevent uncontrolled airflows
- ▶ The condensate drip tray is useful if the temperature temporarily falls below the dew point
- ▶ Ceiling plate with height-adjustable frame (up to +29 mm) and integral supply and extract air slots

- ▶ 2 energy-efficient and acoustically optimised EC fans with low specific fan powers, SFP-1 according to EN 13779
- ▶ Meets the hygiene requirements of VDI 6022
- ▶ Recuperative heat recovery with motorised variable bypass all year round
- ▶ Compact construction, hence particularly suitable for refurbishment projects
- ▶ Demand-based ventilation and extract ventilation is possible by means of monitoring the room air quality and with dedicated control equipment
- ▶ Automatic switching to secondary air mode (only with an air quality sensor) if the room

air quality (measured with the integral VOC sensor, for example) is between the previously defined range. The unit always starts in secondary air mode, which is more energy efficient.

ISO
Standards and guidelines

- ▶ Façade ventilation units of Type SCHOOLAIR-D conform to VDI 6035 and VDMA 24390
- ▶ Hygiene certificate to VDI 6022
- ▶ Heating/cooling fluid conforms to VDI 2035
- ▶ Meets the requirements of EU directive 1253/2014 (ErP)

 **Features**

Ready-to-operate, decentralised ventilation units for supply and extract air, with heat exchangers; addition of secondary air; heat recovery all year round; for the ventilation of rooms and for providing comfortable room temperatures

- ▶ Acoustically optimised EC fans with low specific fan powers, category SFP 1 according to EN 13779
- ▶ Plate heat exchanger for heat recovery (air to air)
- ▶ Heat exchanger for heating and cooling as 2-pipe or 4-pipe system
- ▶ Reduced fine dust and pollen contamination due to integral filters that conform to VDI 6022; F7 fresh air filter and G3 extract air filter
- ▶ Removable ventilation grille allows for easy access to all components for maintenance
- ▶ Condensation-free operation all year round
- ▶ Motorised shut-off dampers, power off to close
- ▶ Motorised secondary air damper for adding secondary air to increase the thermal output
- ▶ Modular control system FSL-CONTROL II,

specially for decentralised ventilation systems

- ▶ Particularly compact height to fit low floor voids
- ▶ Visible part with ventilation grille available in bespoke heights to fit individual projects

and revitalisation projects

- ▶ For use in, for example, offices, meeting rooms and rooms with floor to ceiling glazing

Optional equipment and accessories

- ▶ Air quality sensor
- ▶ Fresh air temperature sensor
- ▶ Lockshields
- ▶ Sleeves for raised floor pedestals

 **Application**

- ▶ Type FSL-U-ZAS decentralised supply and extract air units with secondary air addition, for installation into raised floors
- ▶ Ventilation and extract ventilation of rooms, preferably rooms with a depth up to 6 m
- ▶ 2-pipe or 4-pipe heat exchangers enable good comfort levels
- ▶ Energy-efficient solution since water is used for heating and cooling
- ▶ Supply air discharge as inducing displacement flow
- ▶ For new buildings, refurbishment projects

 **Variants**
Heat exchanger

- ▶ 2: 2-pipe systems
- ▶ 4: 4-pipe systems

Arrangement of water connections

Left and right as viewed from the inside towards the outside. Right-hand version: Water connections and exhaust air opening on the right. Left-hand version: Water connections and exhaust air opening on the left.

- ▶ **AR:** Right-hand version
- ▶ **AL:** Left-hand version

 **Useful additions**

- ▶ Ventilation grilles for floor installation
- ▶ Connecting hoses

Special characteristics

- 2 energy-efficient and acoustically optimised EC fans with low specific fan powers, category SFP 1 according to EN 13779
- Increased capacity due to secondary air addition
- Supply air discharge as inducing displacement flow

- Hygiene tested and certified to VDI 6022
- Compact construction, hence particularly suitable for refurbishment projects
- No additional heating or cooling system required
- Demand-based ventilation and extract ventilation is possible by means of monitoring the room air quality

ISO

Standards and guidelines

- Meets the requirements of VDI 6035 and VDMA 24390
- Meets the requirements of Commission Regulation (EU) No. 1253/2014 (Ecodesign requirements for ventilation units) implementing Directive 2009/125/EC with regard to ecodesign requirements for ventilation units
- Hygiene certificate to VDI 6022

Technical data

Width	1100 mm
Height	150 mm below the raised floor, total height including ventilation grille at least 196 mm
Depth	860 mm
Depth of ventilation grille	340 mm
Fresh air flow rate	0 - 33 l/s or 0 - 120 m ³ /h
Supply air flow rate	150 m ³ /h
Cooling capacity	427 W
Heating capacity	1460 W
Max. operating pressure, water side	6 bar
Max. operating temperature	60 °C
Sound power level	43 dB(A) at 33 l/s or 120 m ³ /h
Supply voltage	230 V AC ±10 %, 50/60 Hz

List of abbreviations

L_{WA} [dB(A)]	A-weighted sound power level of air-regenerated noise
t_{Pr} [°C]	Primary air temperature
t_{WV} [°C]	Water flow temperature - cooling/heating
t_R [°C]	Room temperature
t_{AN} [°C]	Secondary air intake temperature
Q_{Pr} [W]	Thermal output - primary air
Q_{tot} [W]	Thermal output - total
Q_W [W]	Thermal output - water side, cooling/heating
\dot{V}_{Pr} [l/s/m ³ /h]	Primary air volume flow rate
\dot{V}_W [l/h]	Water flow rate - cooling/heating
\dot{V} [l/h]	Volume flow rate
Δt_W [K]	Temperature difference - water
Δp_W [kPa]	Water-side pressure loss
Δp_t [Pa]	Total pressure drop, air side
$\Delta t_{Pr} = t_{Pr} - t_R$ [K]	Difference between primary air temperature and room temperature
$\Delta t_{RWV} = t_{WV} - t_R$ [K]	Difference between water flow temperature and room temperature
Δt_{Wm-Ref} [K]	Difference between mean water temperature and reference temperature
L_N [mm]	Nominal length

The maximum water-side operating pressure for all heat exchangers is 6 bar.

Modular, stand-alone room control system, specially for decentralised ventilation systems (with bus communication as an option)

Features

Easy-to-operate single room control system which can be combined with façade ventilation units to provide demand-based ventilation and extract ventilation and enable the control of the water-side components of the heating and cooling circuits

- ▶ Plug and play solution
- ▶ Main PCB for connecting the integral components
- ▶ Master PCB for connecting components which are required for each room, e.g. control panels or sensors
- ▶ Control valves with G $\frac{1}{2}$ " external thread and flat seal
- ▶ 24 V AC or 230 V AC supply voltage
- ▶ Thermoelectric valve actuator, 0 - 10 V, 24 V DC

Optional equipment and accessories

- ▶ Various sensors, e.g. temperature sensor or room air quality sensor
- ▶ Plug-in real time clock module (RTC) for time-dependent operating modes (5 switching points per day and 4 operating modes can be set)
- ▶ Bus communication via BACnet MS/TP, Modbus RTU or LON-FTT-10 interface
- ▶ Control panels (can be integrated with various frames)
- ▶ Electric valve actuators
- ▶ Balancing and control valves (independent of pressure)

Application

- ▶ Single room control system to be combined with TROX decentralised ventilation units
- ▶ Control of the functions of a decentralised ventilation unit
- ▶ Individual control strategies
- ▶ Modular control equipment with expansion PCBs that allow for the individual adjustment of functions to the project-specific conditions
- ▶ Optional expansion to allow for communication with the BMS using the LON-FTT-10, BACnet MS/TP or Modbus RTU protocol
- ▶ Plug-in communication cable for easy wiring (plug and play)

Components

- ▶ Main PCB (control module)
- ▶ Master PCB (room module)
- ▶ RTC module (real time clock)
- ▶ LonWorks interface
- ▶ BACnet MS/TP interface card
- ▶ Modbus RTU interface
- ▶ VVP47.10-x.xx - straight-way valve (KVS 0.25; 0.4; 0.63 or 1.0)
- ▶ Lockshield
- ▶ Thermoelectric valve actuator 24 V DC, control signal 0 - 10 V, modulating
- ▶ Temperature sensors for fresh air, supply air etc. (e.g. NTC 10 kΩ)

▶ VOC sensor

▶ Control panel with selector switch

▶ Alternative control panel for automatic control (e.g. in schools)

Accessories

- ▶ 5 m configuration cable and USB-RS485 adapter (M536ED7/M516SM3)
- ▶ Wireless communication with BlueCon adapter (M546GA1)

Special characteristics

- ▶ Modular control system with several components that can be individually combined
- ▶ LON-FTT-10, BACnet MS/TP or Modbus RTU interface as an option
- ▶ Master-slave combinations are available (up to 14 slaves per master)
- ▶ Valves with G $\frac{1}{2}$ " external thread and flat seal
- ▶ Valves can be used for up to PN 16
- ▶ Push-fit valve actuator
- ▶ Automatic, energy-efficient switching between fresh air mode and secondary air mode (based on air quality, depending on unit)
- ▶ Variable bypass damper for the heat recovery control
- ▶ Heat recovery all year round

Technical data

Operating temperature	0 - 50 °C
Relative humidity	<90% no condensation
Air pressure	> 700 hPa
Storage temperature	-20 to 70 °C

Disclaimer

For all our business relationships only our general delivery payment conditions in the respective version.

Our warranty is based solely on the contract between a customer and TROX. The information provided in this document is without obligation and does in particular not constitute a guarantee of the properties or usage of a product. The information given is of a general nature and may vary from case to case. The products and systems shown are examples. Some products and systems shown may have been designed for individual customers and hence represent customised solutions. Some of these products and systems come with special parts or equipment that is only available at a surcharge.

The information regarding the scope of delivery, appearance, performance, dimensions, and weights was correct at the time of going to press. Subject to change. This edition replaces all previous editions.
